Innovative Construction Technologies & Thermal Comfort for Affordable Housing

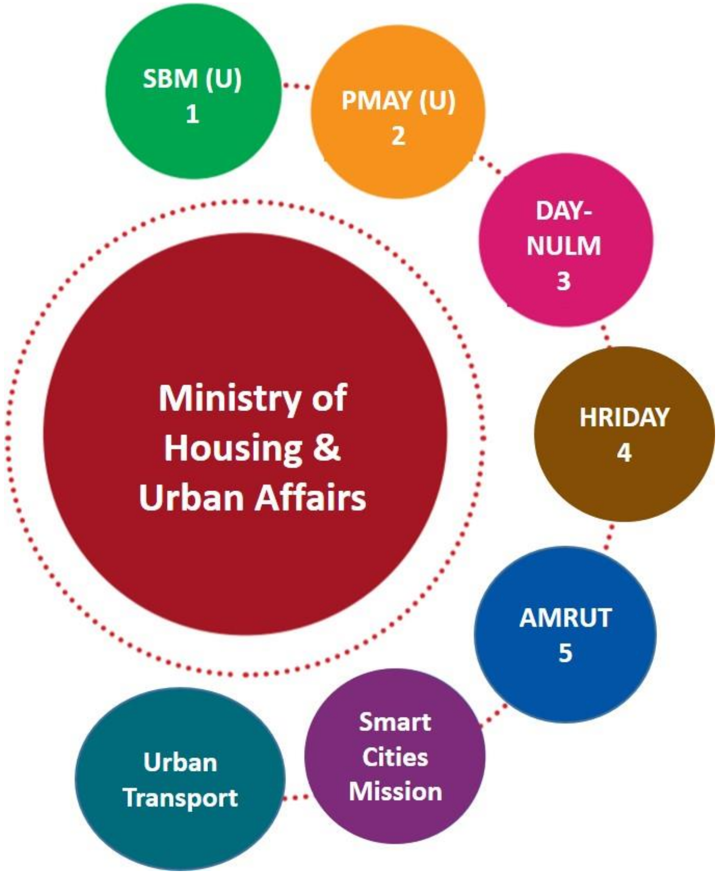
RACHNA 2.0

RESILIENT, AFFORDABLE AND COMFORTABLE HOUSING THROUGH NATIONAL ACTION

Prepared by
Climate Smart Building (CSB) Cell, North Cluster, LHP Lucknow

INTRODUCTION – MINISTRY OF HOUSING & URBAN AFFAIRS (MoHUA)

- **Ministry of Housing and Urban Affairs (MoHUA)** is the supreme authority of the Government of India to formulate and monitor all the programmes concerning the housing and urban development of the country.
- **The Ministry of Housing and Urban Affairs (MoHUA)** through its flagship mission **Pradhan Mantri Awas Yojna-Urban (PMAY-U)** ensures a pucca house to all eligible urban households.
- PMAY-U aims to achieve Urban Development through Transformation, Innovation and Sustainable Inclusions.



1. Swachh Bharat Mission- Urban, 2. Pradhan Mantri Awas Yojana- Urban, 3. Deendayal Antyodaya Yojana- National Urban Livelihood Mission, 4. Heritage Cities Development and Augmentation Yojana, 5. Atal Mission for Rejuvenation and Urban Transformation

INTRODUCTION – MINISTRY OF HOUSING & URBAN AFFAIRS (MOHUA)-PMAY

- Due to Rapid increase in urbanization and believing it as an opportunity to reduce poverty.
- For addressing the huge housing demand in the Affordable Sector, Govt. of India launched **Pradhan Mantri Awas Yojana-Urban** in June 2015.

PMAY (U) Achievement (provisional), as on 2nd January 2023

Overall Sanctions for 1.23^ crore Houses

Construction of Houses (Nos in lakh)

Demand	Sanctioned	Grounded*	Completed
112.24	122.69	107.30	67.10

Financial Progress (₹ in Cr)

Committed	Released	Expenditure	UC Received
2,03,427	1,35,040	1,25,504	1,24,691

16 lakh houses are being constructed using New Technologies

Source: PMAY Website

INTRODUCTION- GLOBAL HOUSING TECHNOLOGY CHALLENGE (GHTC-INDIA)

- The Ministry of Housing and Urban Affairs, Government of India has conceptualized a Global Housing Technology Challenge - India (GHTC- India).
- To identify and mainstream a basket of innovative technologies from across the globe that are sustainable and disaster-resilient.
- Such technologies would be cost effective, speedier and ensure a higher quality of construction of houses, meeting diverse geo-climatic conditions and desired functional needs.
- A Technology Sub-Mission (TSM) has been set up.

COMPONENTS OF GLOBAL HOUSING TECHNOLOGY CHALLENGE (GHTC-INDIA)

Construction Technology India: Grand Expo-Cum-Conference

- Promotion of Innovative Construction Technology
- Platform to Facilitate Signing of MoUs and form Potential Partnerships.
- Technical Evaluation, Exchange of Knowledge, and business.
- Exhibition of Technologies

Proven Demonstrable Technologies

- Onboard States & Local Support Partners
- Six Light House Project Sites
- Induct Established Proven technologies across the Globe
- Identify Basket of Site-specific Technologies
- Different Technology for Each Site
- Live Laboratories for learning
- Technology to be Adopted in Curriculum and India System

Potential Future Technologies

- Setting up **ASHA- India** (Affordable Sustainable Housing Accelerators)
- Support Domestic Technologies through Product Development, Mentoring & Market Support
- Incubation Centers in IITs
- Organizing Periodic Accelerator Workshops

EVENTS OF GLOBAL HOUSING TECHNOLOGY CHALLENGE (GHTC-INDIA)

Construction Technology India (CTI) – 2019
Expo-cum-Conference, on 2^{nd} to 3^{rd} March 2019, Vigyan Bhawan, New Delhi.

Indian Housing Technology Mela (IHTM) on 5^{th} to 7^{th} October 2021 in Lucknow, Uttar Pradesh.

Indian Urban Housing Conclave (IUHC)-2022,
on 19^{th} to 21^{st} October 2022, at Rajkot.

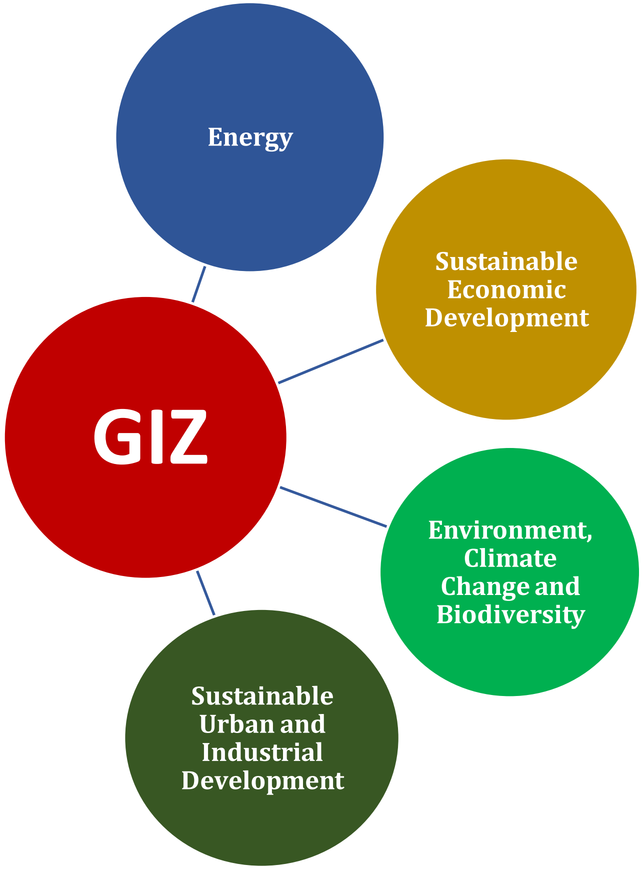
GHTC- SHORTLISTED TECHNOLOGIES

- 54 proven technologies were shortlisted suiting different climatic zone conditions in the CTI conference in 2019.

Broad Category	Technologies (Nos.)
Precast Concrete Construction System - 3D Precast volumetric	4
Precast Concrete Construction System – Precast components assembled at site	8
Light Gauge Steel Structural System & Pre-engineered Steel Structural System	16
Prefabricated Sandwich Panel System	9
Monolithic Concrete Construction	9
Stay In Place Formwork System	8
Total	**54**

INTRODUCTION – GIZ AND IGEN (INDO GERMAN ENERGY PROGRAM)

- GIZ is an international cooperation enterprise for sustainable development which operates worldwide, on a public benefit basis.
- For over 60 Years, **GIZ** has been working jointly with partners in India for sustainable economic, ecological, and social development.
- The Government of the Republic of India and the Federal Republic of Germany under the Indo-German Technical Cooperation, agreed to jointly promote the “Indo-German Energy Programme” **(IGEN)** with the aim to foster sustainability in the built environment through GIZ.



INTRODUCTION – CLIMATE SMART BUILDINGS PROGRAMME

The Ministry of Housing and Urban Affairs (MoHUA) aims to enhance climate resilience and thermal comfort in the affordable housing segment through GIZ under Indo German Energy programme (IGEN)'s programme, **Climate Smart Buildings (CSB)**.

Aim:

- Adopting sustainable and low-impact design.
- Adoption of best available Materials and construction technologies.
- Use of innovative technologies to provide desired thermal comfort for mass replication.

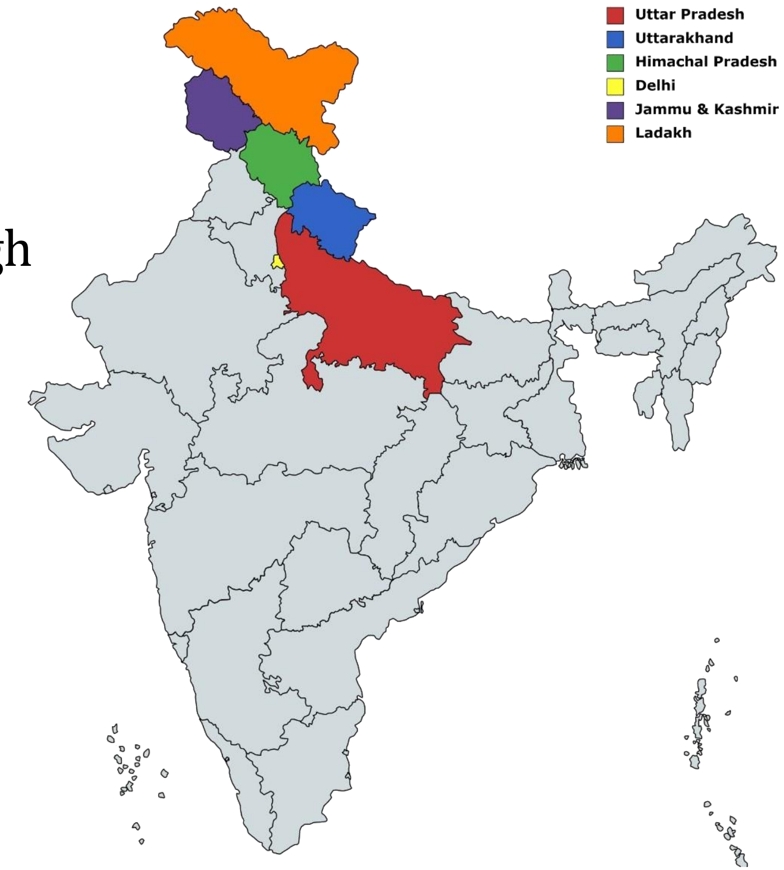
INTRODUCTION: CLIMATE SMART BUILDINGS CELL-NORTH CLUSTER

- Climate Smart Buildings Cluster cells are established in each of the six Light House Project states where pilot affordable housing projects are being built utilizing innovative construction technologies.

Goal:

To improve climate resilience and thermal comfort in buildings through

- Passive Measures
- Locally sustainable Materials
- Low embodied energy materials
- Best available technology



OBJECTIVES: CLIMATE SMART BUILDINGS CELL, NORTH CLUSTER

In the direction to achieve the goal of sustainability and thermal comfort in affordable housing, CSB Cell is working with following objectives:

WP1: Facilitate implementation and monitoring of Light House Project Lucknow (LHPs)

WP 2: Technical assistance to enhance thermal comfort in upcoming Demonstration Housing Projects (DHPs) and ARHCs (Affordable rental housing complexes) and other Public/Private housing projects in West Cluster

WP 3: Inclusion of climate resilience and thermal comfort requirements in building byelaws and Local Government framework in West Cluster

WP 4: Capacity development of Govt officials and private stakeholders on thermal comfort in the North Cluster

Handbook: Innovative Construction Technologies & Thermal Comfort in Affordable Housing

A Handbook for training programs on innovative construction technologies & Thermal comfort in Affordable housing was curated and launched by the **Hon'ble Prime Minister** at the Indian Urban Housing Conclave in Rajkot on 19th October 2022.

To disseminate the knowledge in this handbook, Ministry of Housing and Urban Affairs is launching a seconds set of training i.e. **RACHNA2.0,** from Dec 2022 till Mar 2023.

Handbook: Innovative Construction Technologies & Thermal Comfort in Affordable Housing

CONTENTS

Ministry of Housing and Urban Affairs
Government of India

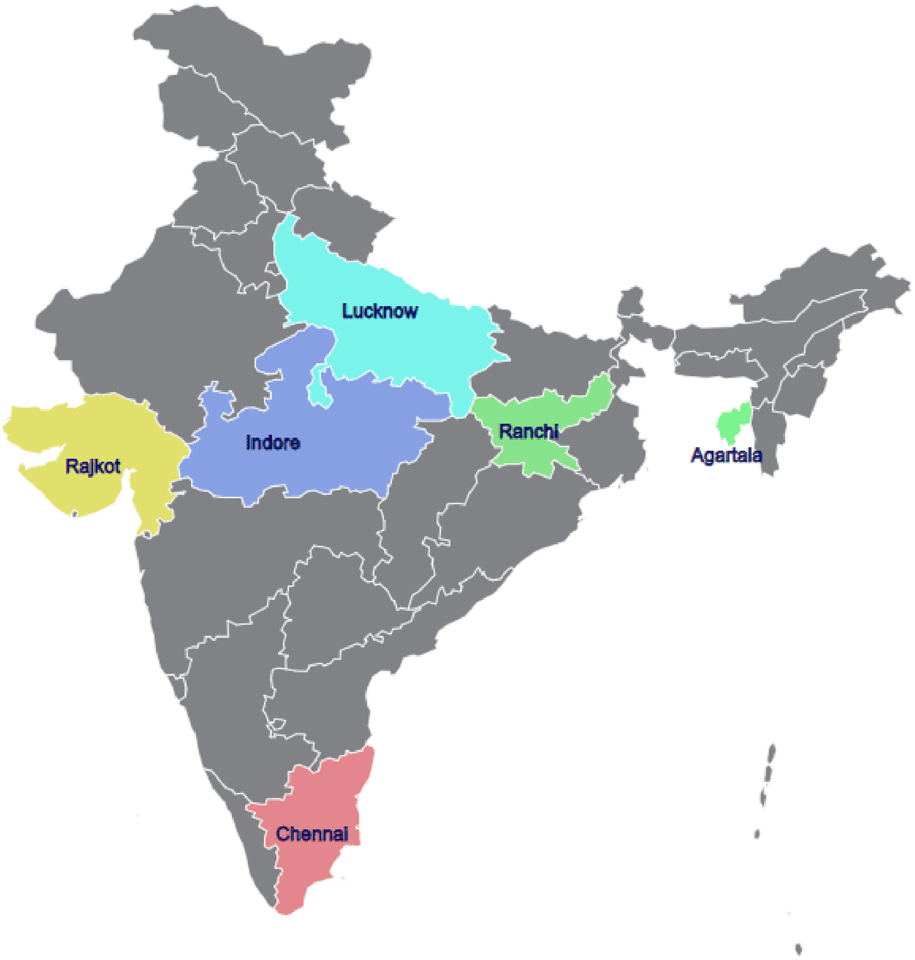
SESSION-1

Innovative Construction Technologies of Light House Technologies, LHP Study and Observations.

1. LHPs Construction Technologies
2. Thermal Comfort Analysis and Recommendations on LHPs and Assisted Demo Projects.
3. Life Cycle Cost Analysis and its Impact in Carbon Emission.
4. Q&A on New & Innovative technologies and Thermal Comfort.

CONCEPT OF LIGHT HOUSE PROJECTS (LHPS)

- Ministry of Housing and Urban Affairs Under **PMAY(U)**, set up a **Technology Sub-Mission (TSM)** to provide:
    - Alternative sustainable technological solutions.
    - Better, Faster & cost-effective construction methodologies.
    - Houses suiting to geo-climatic and hazard conditions of the country.
- **Light House Projects** have been conceptualized as part of **Global Housing Technology Challenge – India (GHTC-India)**
- Construction of six **LHPs** with allied infrastructure and six categories of globally proven innovative technologies were envisaged in six different states.



CONCEPT OF LIGHT HOUSE PROJECTS (LHPS)

- The fundamental concept of the Light-House Projects is to encourage large-scale participation of the people of India for mainstreaming the proven technologies identified globally by the principles.

Site Visit	Pros & Cons	Regional Factor	Economy of Scale
Exposure to Technologies/ Materials/ Processes	Suitability/Safety	Acceptability	Demand
Technical knowhow	Cost Factor	Willingness to Pay	Availability of Materials/ Skilled Manpower
	Speed/ Quality	Approvals	Logistics
	Availability of Materials		

THE LIGHT-HOUSE PROJECTS (LHP) IN INDIA

Hon'ble Prime Minister Shri Narendra Modi laid the foundation stone of six Light House Projects (LHPs) each consisting of approx. 1000 houses in January 2021, in six cities :

Precast Concrete Construction System – Precast Components Assembled at Site

- Chennai, Tamilnadu
- No. of Houses: 1152

Monolithic Concrete Construction using Tunnel Formwork

- Rajkot, Gujarat
- No. of Houses: 1144

Prefabricated Sandwich Panel System

- Indore, Madhya Pradesh
- No. of Houses: 1024

Precast Concrete Construction System – 3D Volumetric

- Ranchi, Jharkhand
- No of Houses: 1008

Light Gauge Steel Structural System & Pre-engineered Steel Structural SystemAgartala, Tripura

- Agartala, Tripura
- No of Houses: 1000

PVC Stay in Place Formwork System

- Lucknow, Uttar Pradesh
- No of Houses: 1040

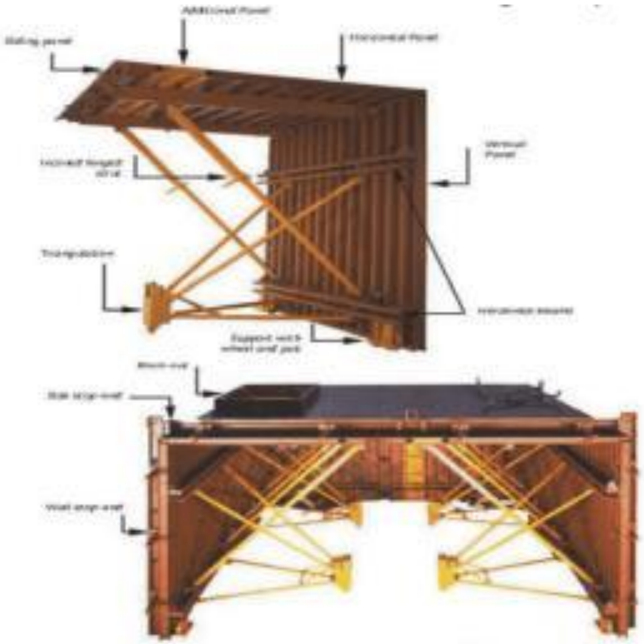
LHP RAJKOT- INAUGRATION (19TH October 2022)

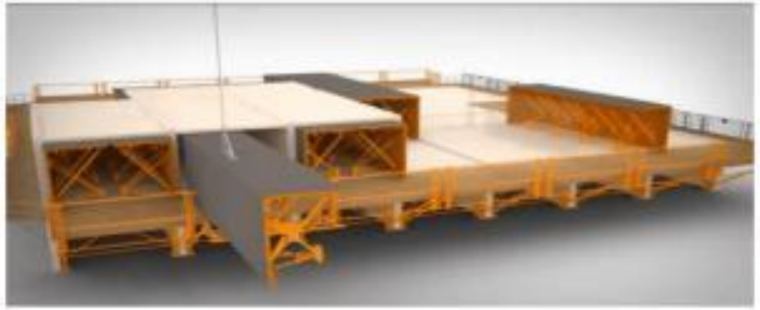
LHP Rajkot- Monolithic Concrete Construction using Tunnel Formwork

- Customized engineering formwork replacing conventional steel or plywood shuttering systems.
- Mechanized system for cellular structures.
- Two half shells which are placed together to form a room or cell.
- Walls and slab are cast in a single day.
- The formwork is stripped the next day for subsequent phase.

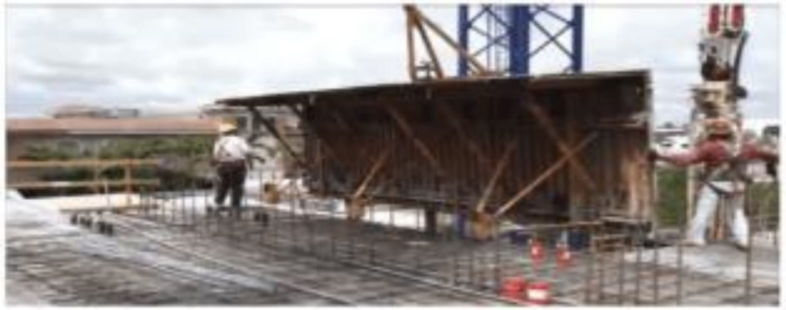


Tunnel Formwork

Current progress



Box out of door and windows

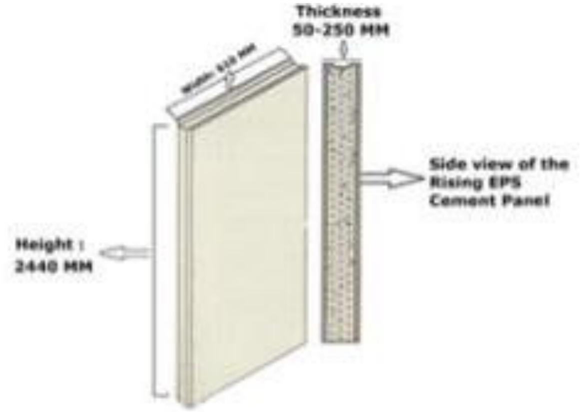


Kicker form of tunnel formwork panel

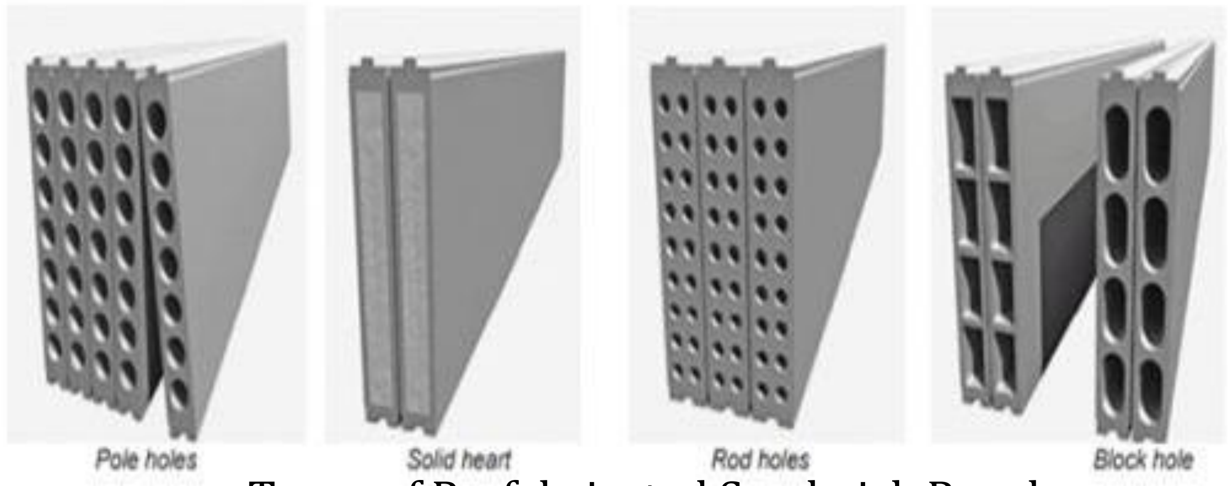
Monolithic Tunnel Formwork Panel

LHP Indore-Prefabricated Sandwich Panel System

- Lightweight composite wall, floor and roof sandwich panels made of thin fibre cement or calcium silicate board as face covered boards.
- Core material is EPS granule balls, adhesive, cement, sand, fly ash and other bonding materials in mortar form.
- The core material in slurry state is pushed under pressure into pre-set moulds.
- Once set, it shall be moved for curing and ready for use with steel support structure beams and columns.



Prefabricated EPS Sandwich Panel



Types of Prefabricated Sandwich Panels

Steel Structure Prefabricated EPS Panel

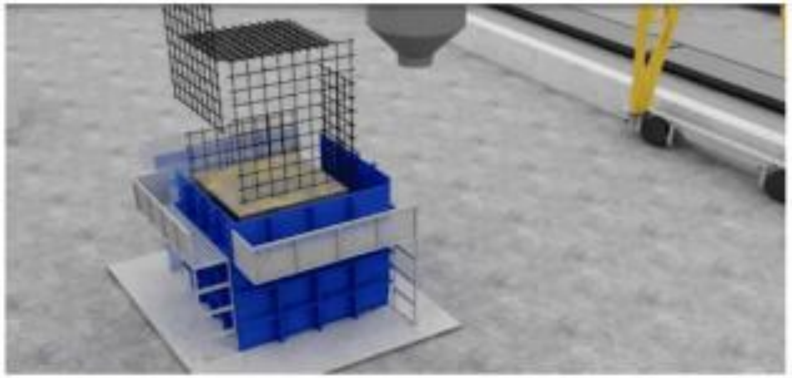
Current Status

LHP Ranchi- Precast Concrete Construction System – 3D Volumetric

- Components like room, Bathroom, Kitchen etc are cast monolithically in Plant or Casting yard in a controlled condition.
- Magic Pods (Precast Components) are transported, erected & installed using cranes .
- Prestressed slabs are installed as flooring elements.
- Consecutive floors are built in similar manner to complete the structure.

Current Progress

Construction and installation



Pre Casting of building modules

LHP LUCKNOW- PROJECT OVERVIEW

Project Brief	
Location of Project	Avadh Vihar, Lucknow, U.P.
No. of DUs	1,040 (S+13)
Plot area	20,036 sq.mt.
Carpet area of each DU	34.51 sq.mt.
Total built up area	48,702 sq.mt.
Technology being used	Stay In Place Formwork System with pre-engineered steel structural system
Other provisions	Community Centre, Shops
Broad Specifications Broad Specifications	
Foundation	RCC raft foundation
Structural Frame	Pre-engineered steel structural frame
Walling	Stay In Place PVC Formwork System
Floor Slabs/Roofing	Cast in-situ deck slab

LHP LUCKNOW-PROJECT PLAN

Project Layout Plan

Block Plan

Site Plan

CONSTRUCTION TECHNOLOGY: LHP LUCKNOW

- **Hot Rolled Pre-Engineered Building (PEB)** sections act as a structural framework of the building whereas SIP (Stay-in-Place) formwork works as a partition wall.
- **0.9mm Deck Sheet** used as slab support component over which concrete is casted for enhancing strength. It reduces casting time, propping, shuttering and centering support.
- **Self-Compacting Concrete** is being poured in SIP formwork as an infill to make it more rigid and thermally sound.
- **Polyvinyl Chloride(PVC)** based polymer components serve as a permanent stay-in-place formwork with infilled **concrete** for building walls.

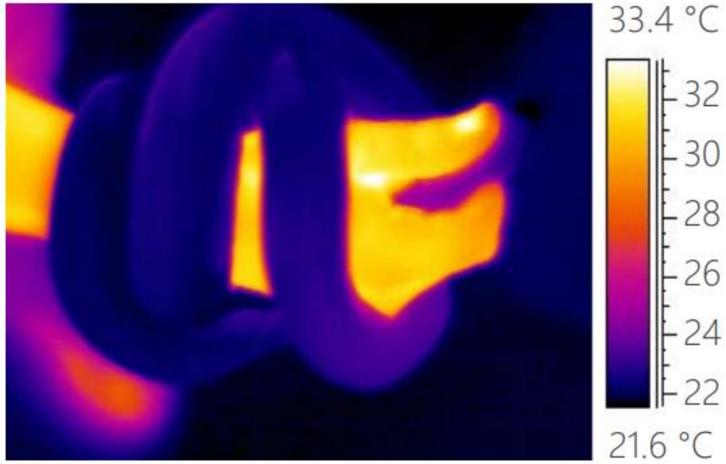
SESSION-2
Importance of Thermal Comfort

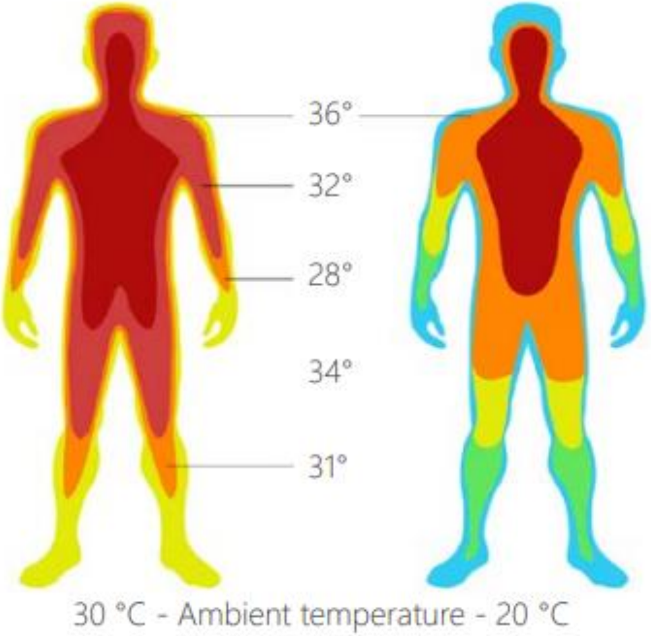
1. *Thermal comfort and cooling demand*
2. *Factors affecting thermal comfort and cooling demand*
3. *Contemporary approaches*
4. *Thermal comfort metrics*

THERMAL COMFORT & ITS IMPORTANCE

Thermal comfort is "the state of mind that expresses satisfaction within the thermal environment" and generally assessed subjectively (ASHRAE, 2004).

- In case of humans, the core body temperature lies in a narrow range around 37° C (ASHRAE, 2021).
- To maintain the body core temperature during varying external temperatures, the human body is constantly acclimatizing itself to its external environmental conditions through exchange of heat between the body and surrounding environment.
- Both core body temperature and skin surface temperature are relevant in understanding thermal comfort.



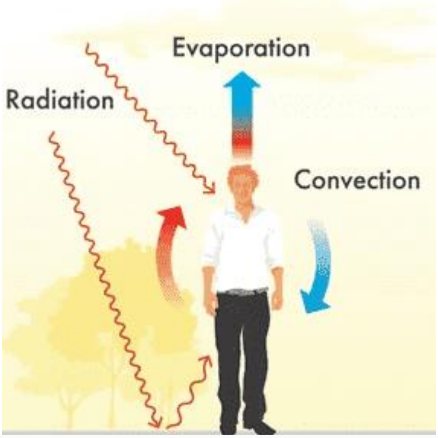


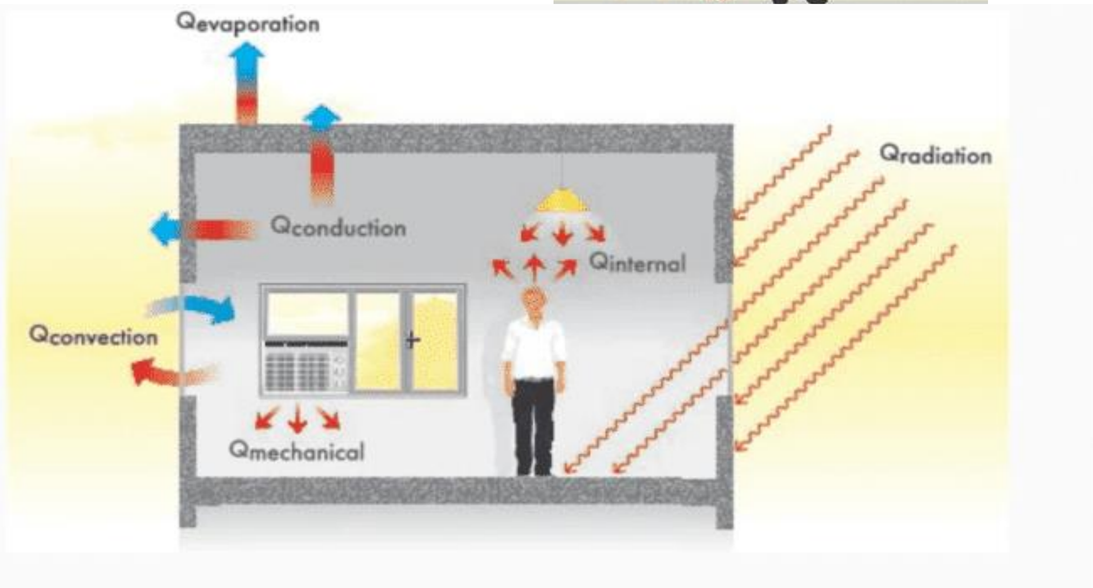
TRANSFER OF HEAT FROM HUMAN BODY

Mode of Heat Transfer

What affects the **Thermal indoor environment?**

- The heat exchange between the human body and its environment occurs mainly in three ways
  - Conduction
  - Convection
  - Radiation
- Thermal indoor environment is affected by both internal and external sources.





Thermal comfort refers to the percieved feeling on the human body as the result of the effect of heat and cold sources in the environment.

METABOLIC RATE FOR HUMAN ACTIVITY AND OCCUPANCY

Table 3.1
Metabolic Rate *M* for Various Activities

1 M = 1 met = 58.2 W/m² =18.4 Btu/h.ft²

Activity	met	W/m²	Btu/(h • ft²)
Sleeping	0.7	40	13
Reclining	0.8	45	15
Seated, quiet	1.0	60	18
Standing, relaxed	1.2	70	22
Walking (0.9 m/s, 3.2 km/hr, 2.0 mph)	2.0	115	37
Walking (1.8 m/s, 6.8 km/h, 4.2 mph)	3.8	220	70
Office- reading, seated	1.0	55	18
Office, walking about	1.7	100	31
House cleaning	2.0-3.4	115-200	37-63
Pick and shovel work	4.0-4.8	235-280	74-88
Dancing, social	2.4-4.4	140-255	44-81
Heavy machine work	4.0	235	74

Source: Courtesy of ASHRAE, *Standard 55-2013: Thermal Environmental Conditions for Human Occupancy*, American Society of Heating, Refrigerating and Air-Conditioning Engineers, Atlanta, GA, 2010. With permission.

- Thermal comfort is maintained by heat mass transfer.
- Human body generates heat about 100w under sedentary condition with body area 1.5 to 2 sqm.
- More layer of clothing = more insulation = less heat loss

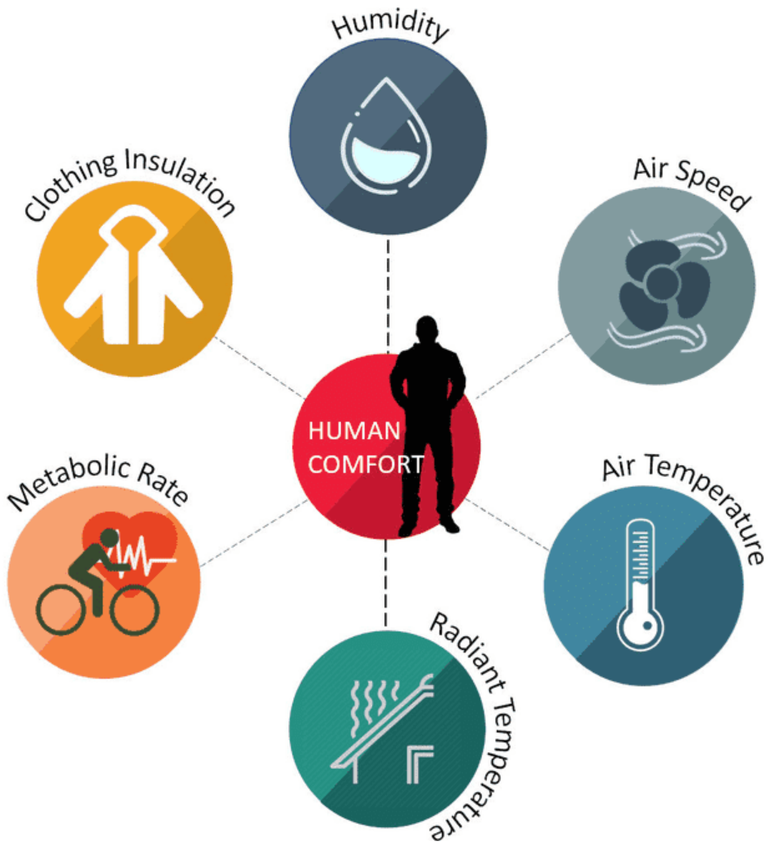
FACTORS AFFECTING THERMAL COMFORT

Environmental Parameters/Factors

- Air Temperature
- Mean Radiant Temperature
- Air Velocity
- Humidity

Personal Parameters/Factors

- Clothing Level
- Physical Activity



Body Part	Skin Location	Cold (15 °C)	Neutral (27 °C)	Hot (47 °C)
A	Forehead	31.7	35.2	37
B	Back of Neck	31.2	35.1	36.1
C	Chest	30.1	34.4	35.8

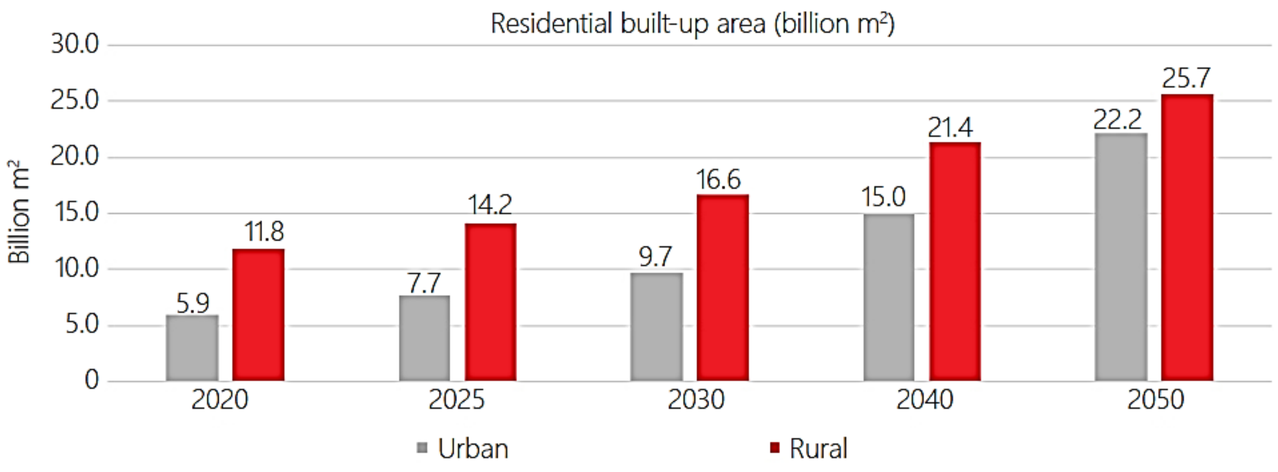
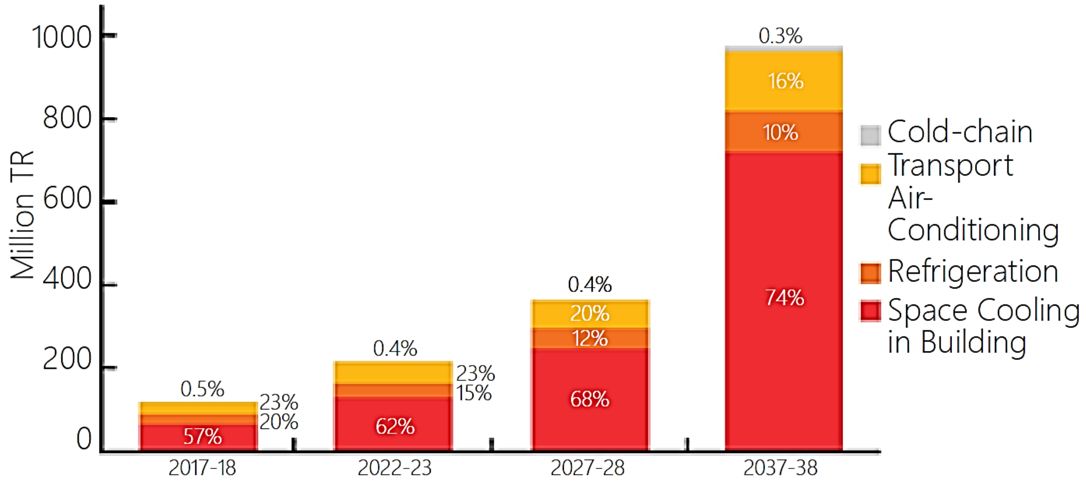
Q	Calf	25.1	31.6	35.9
R	Foot	23.2	30.4	36.2

Skin surface temperature at various locations of the body in cold, neutral, and hot indoor environment.

FACTORS AFFECTING THERMAL COMFORT & COOLING DEMAND



Projected increase in residential built-up area in urban and rural India. Source: ICAP



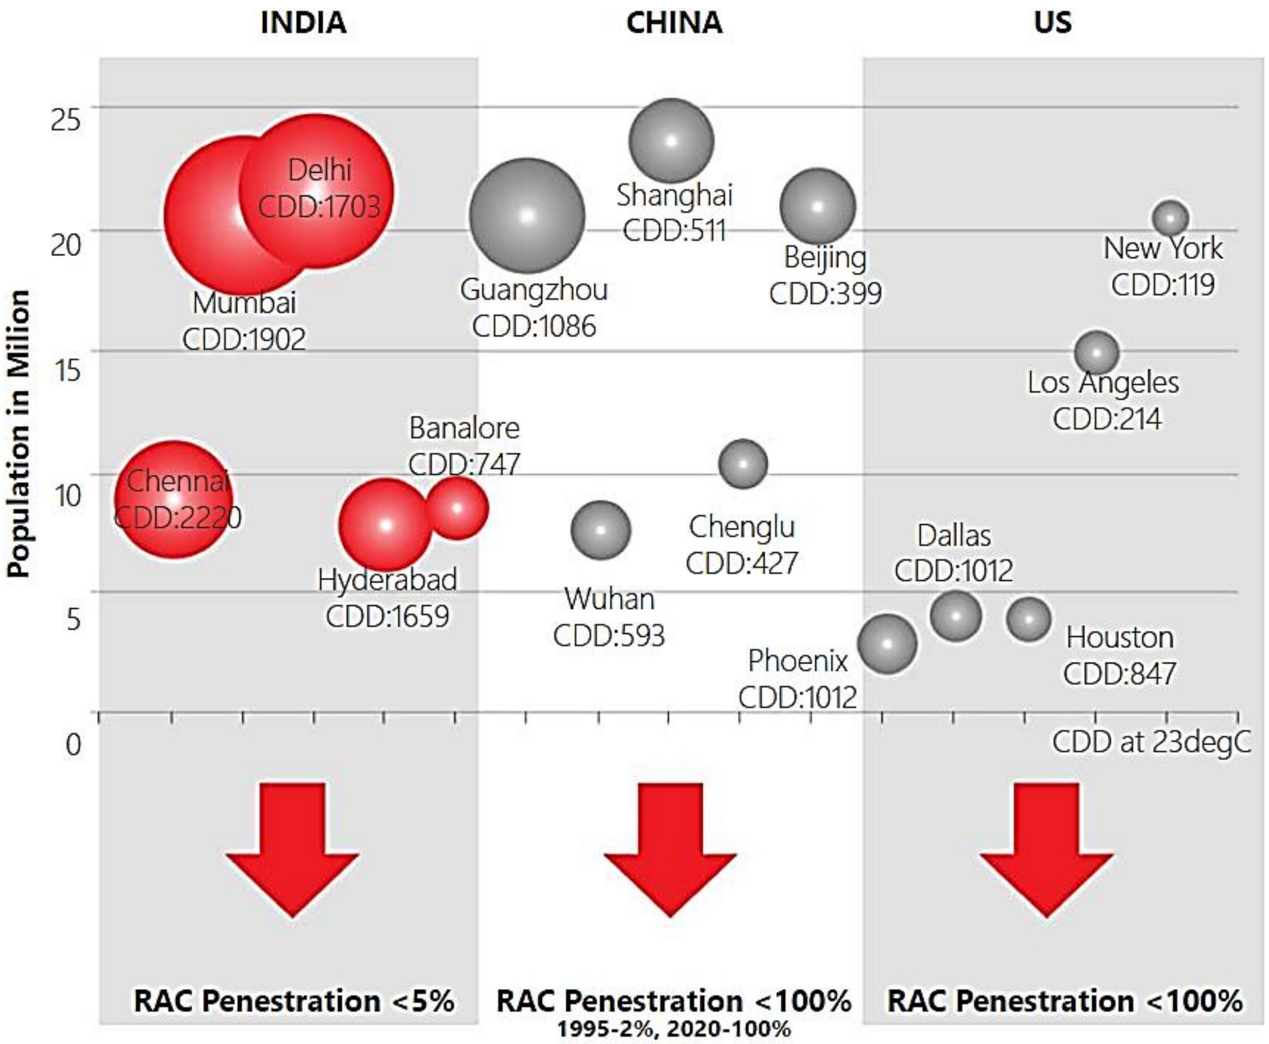
Sector-wise growth in cooling demand. Source: ICAP

The India Cooling Action Plan sets the following goals to promote sustainable cooling and thermal comfort for all.

1. **20-25%** reduction of cooling demand across various sectors by 2037-2038
2. **25-40%** reduction in cooling energy requirements by 2037-2038.
3. **25-30%** reduction in refrigerant demand by 2037-2038.
4. Training and certification of **1,00,000** service technicians by 2022-2023
5. Recognizing "cooling and related areas" as a thrust area of research

FACTORS AFFECTING THERMAL COMFORT & COOLING DEMAND

- Major Indian cities have high population and cooling degree days.
- Cooling demand to combat uncomfortable conditions is also high.
- When residential buildings are designed in a non-sustainable manner.
- The reliance on active cooling that uses devices such as air-conditioners increases to achieve thermal comfort.



Cooling demand in India, China, and USA
Source: Sustainable and Smart Space Cooling Coalition (2017).

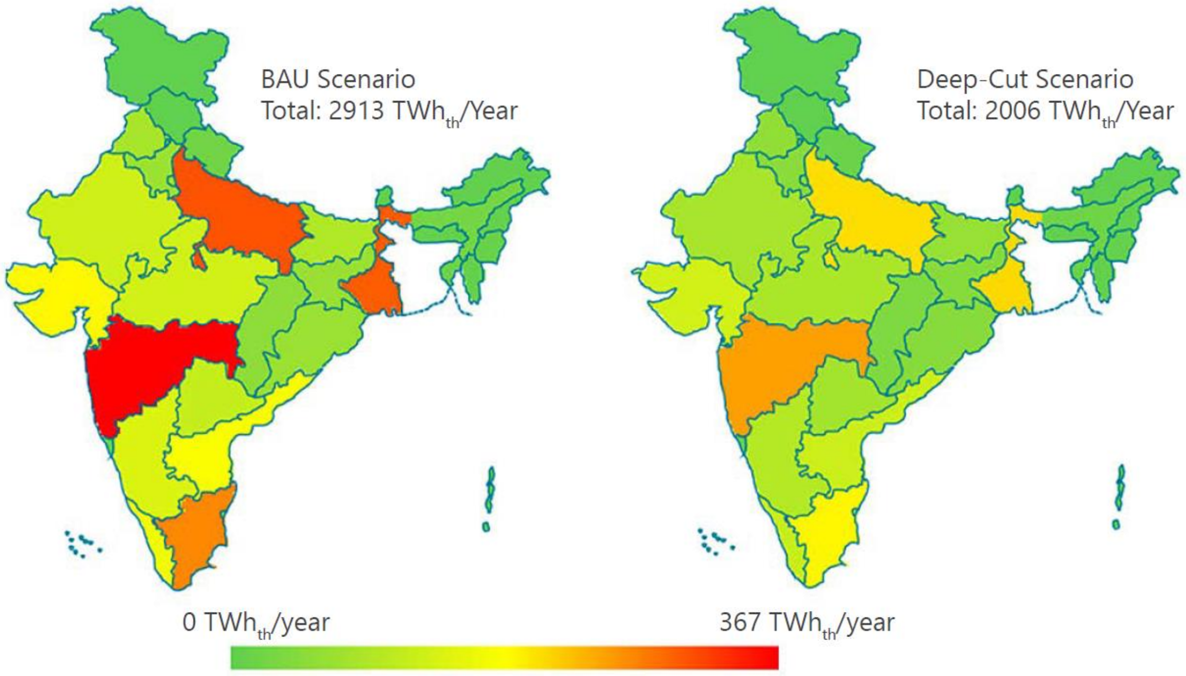
CONTEMPORARAY APPROACHES

BAU vs Deep Cut Scenario

- BAU refers to what is actually prevailing.
- The deep-cut scenario refers to a proposition of implementing aggressive measures such as improvements in building envelope technologies and cooling technologies to reduce the cooling demand.

Target values for metrics like

- Residential Envelope Transmittance Value (RETV) of envelope
- U-value of roof for both existing and new buildings are set for different time periods in the deep cut scenario.



Urban residential space cooling energy requirement map of India, 2050
Source: Developing Cost-Effective And Low-Carbon Options To Meet India's Space Cooling Demand In Urban Residential Buildings Through 2050

CONTEMPORARAY APPROACHES

Impact of Building envelope

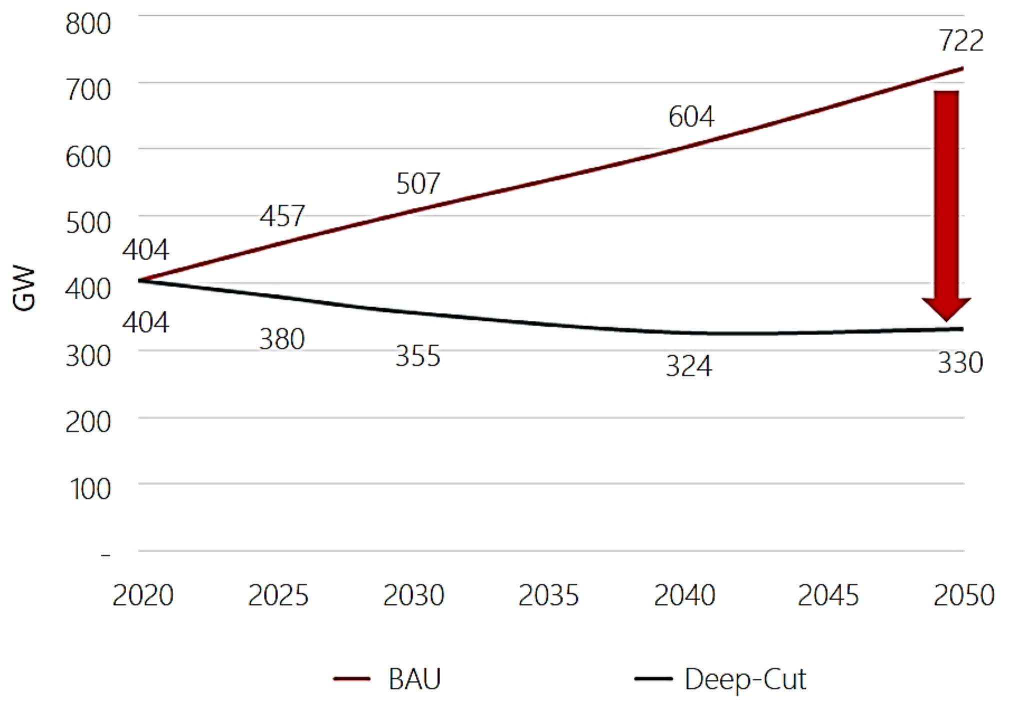
The envelope of a building undergoes retrofitting at much greater intervals. This translates into higher energy and environmental costs for decades.

Optimizing building envelope as a standalone strategy with respect to its RETV value demonstrates opportunity to significantly reduce cooling demand by decreasing the discomfort degree hours (DDH).

Two-fold benefit of optimised building envelope

1. Reduces cooling loads on other building systems

2. Reduces associated economic impacts such as HVAC sizing, etc.



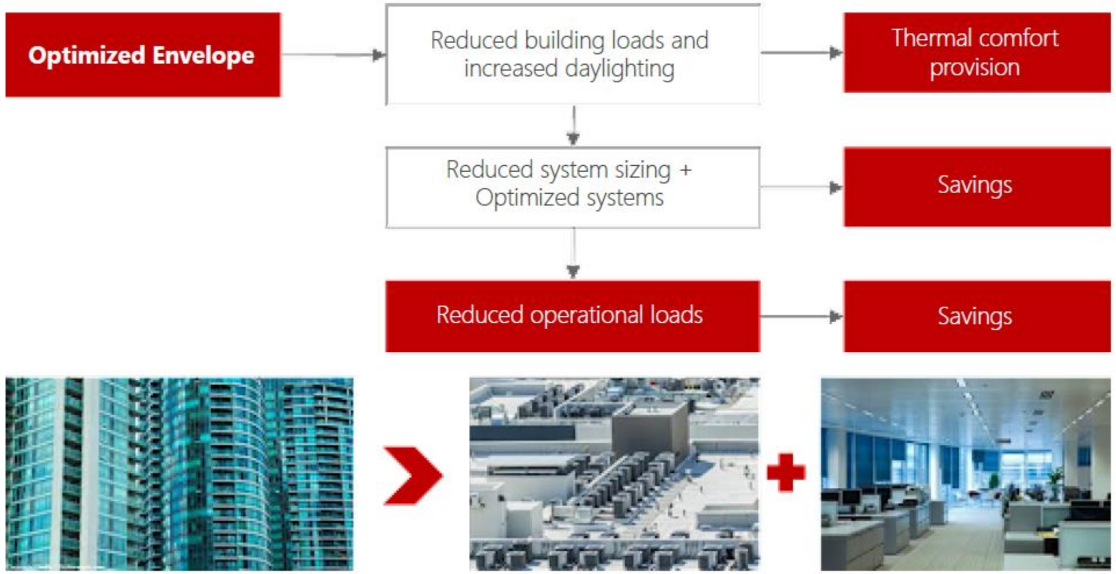
Peak Load for Cooling systems (GW)
Source: Developing Cost-Effective and Low-Carbon Options to Meet India's Space Cooling Demand In Urban Residential Buildings Through 2050

CONTEMPORARAY APPROACHES

Provisions in code

To achieve the needful reduction in cooling demand, national guidelines, codes, and tools have been developed for implementation.

- ECBC 2007 & 2017(Revised Edition) to set the minimum energy performance for commercial buildings in India.
- Eco-Niwas Samhita (Part-1) was launched in 2018 to include minimum performance requirements for residential building envelope.
- Eco Niwas Samhita (Part-2) launched in 2021 with inclusion of building systems in addition to envelopes.



Reduced operational energy loads and economic benefits with thermal comfort provision in codes like ECBC, ENS 20181 & 2021 from optimized building envelope and electro mechanical systems

THERMAL COMFORT METRICS

- Heat transfer through roofs can be considered similar to walling material in terms of thermal conductivity and relevance of R-value.
- However, to reduce radiative heat gains, surface of roof exposed to the outdoors can be treated with coatings that increase solar reflectance.

Parameter	Metric	Building envelope element
Thermal Conductivity	R value – U value	Walls • Internal • **External**
Thermal Mass	Specific heat capacity	
Thermal Conductivity (Frames and Glass)	R value – U value	**Fenestration** • **Windows** • Skylights • Doors
Solar Gains	Solar Heat Gain Coefficient	
Visible Light Transmittance	VLT	
Thermal Conductivity	R value – U value	**Roofs** Floors Foundations
Thermal Emissivity	Solar Reflectance	

Relevant metrics for building envelope elements in terms of heat transfer
Source: Rawal, R., 2021. Heat Transfer And Your Building Envelope, Solar Decathlon India

SESSION-3

Building Physics & Fundamental of Thermal Comfort

1. *Concept of energy and heat*
2. *Factors influencing heat transfer and laws of thermodynamics*
3. *Heat balance and adaptive thermal comfort method*
4. *Local thermal discomfort*

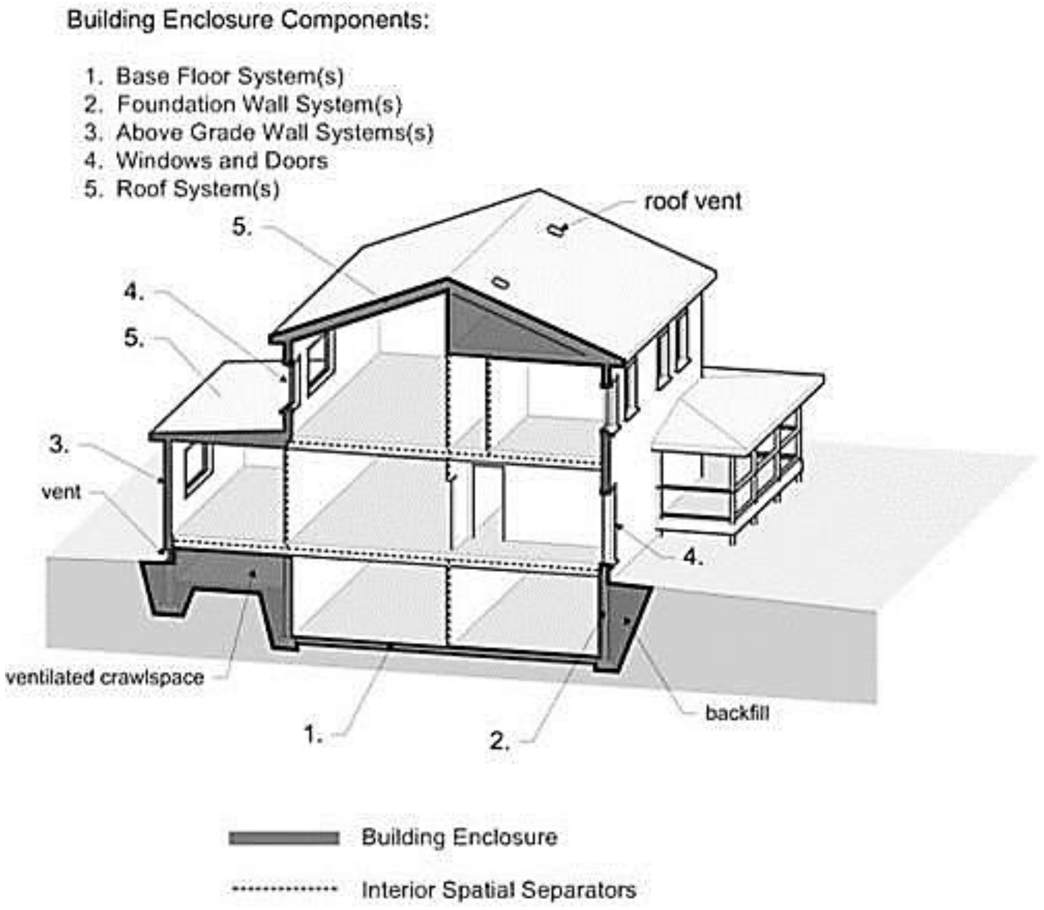
BUILDING PHYSICS (BUILDING)

Building physics includes the study of the interactions between heat, moisture and air movement between indoor and outdoor environments

What is a *BUILDING*?

Your ***Environmental Separator***.

- A building provides shelter - shelter from the elements as well as from other dangers and the outdoor environment.
- Its' function is to separate the inside from the outside
- A building creates an interior environment that is different from the exterior environment – it is an environmental separator.

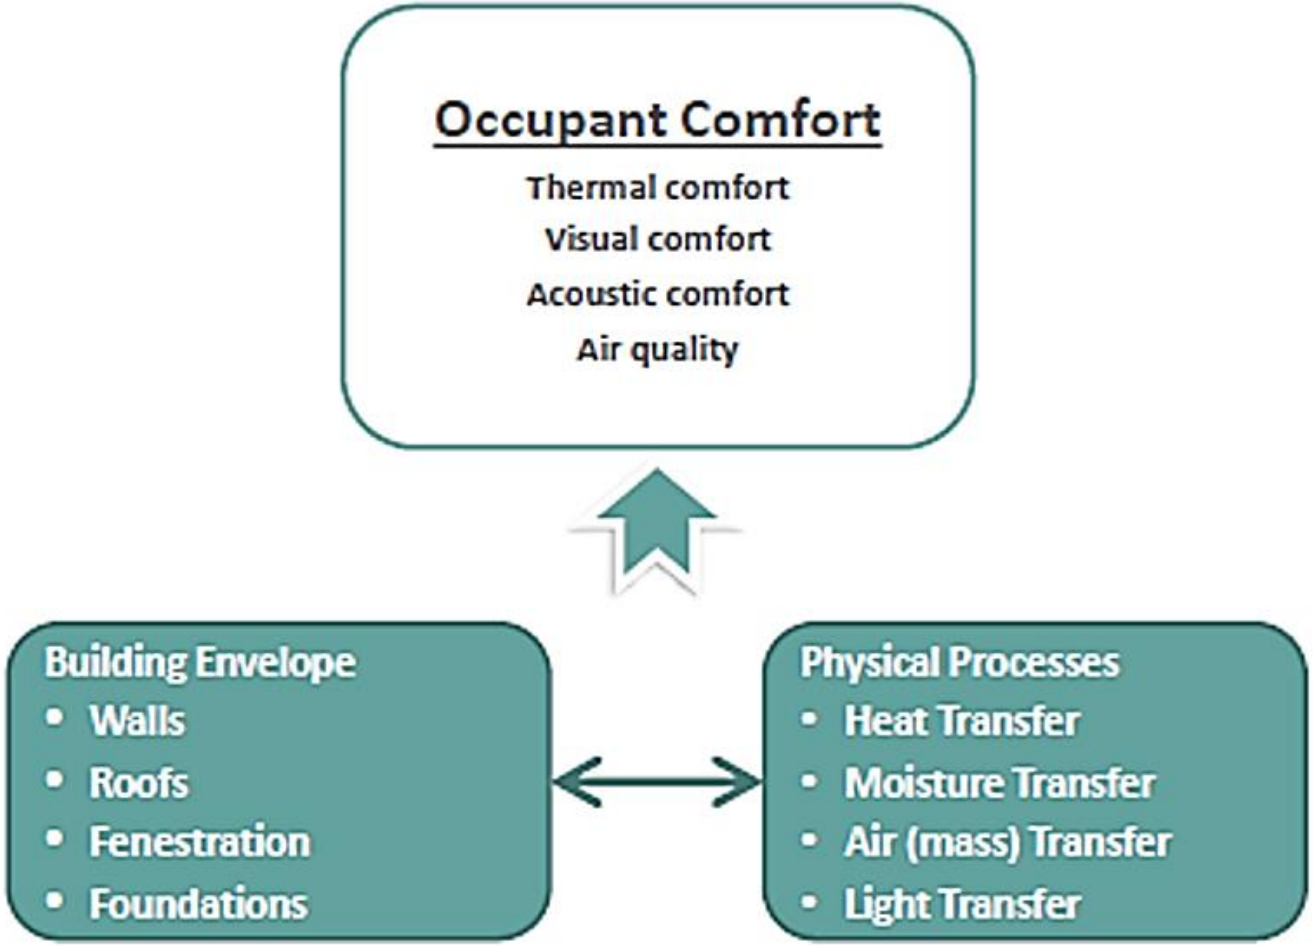


BUILDING PHYSICS (PURPOSE OF BUILDING)

Purpose of *Buildings*?

Buildings are designed for *People* and for *Specific tasks.*

- ✓ The building needs to keep people *Comfortable, Efficient, and Healthy*.
- ✓ *Energy Efficient Design* seeks to create buildings that keep people comfortable while minimizing Energy Consumption.



Occupant comfort, Physical processes, and Elements of building Relationship

BUILDING PHYSICS (CONCEPT OF ENERGY & HEAT)

2nd Law of *Thermodynamics*

"In an isolated system, a process can occur only if it increases the total entropy of the system".

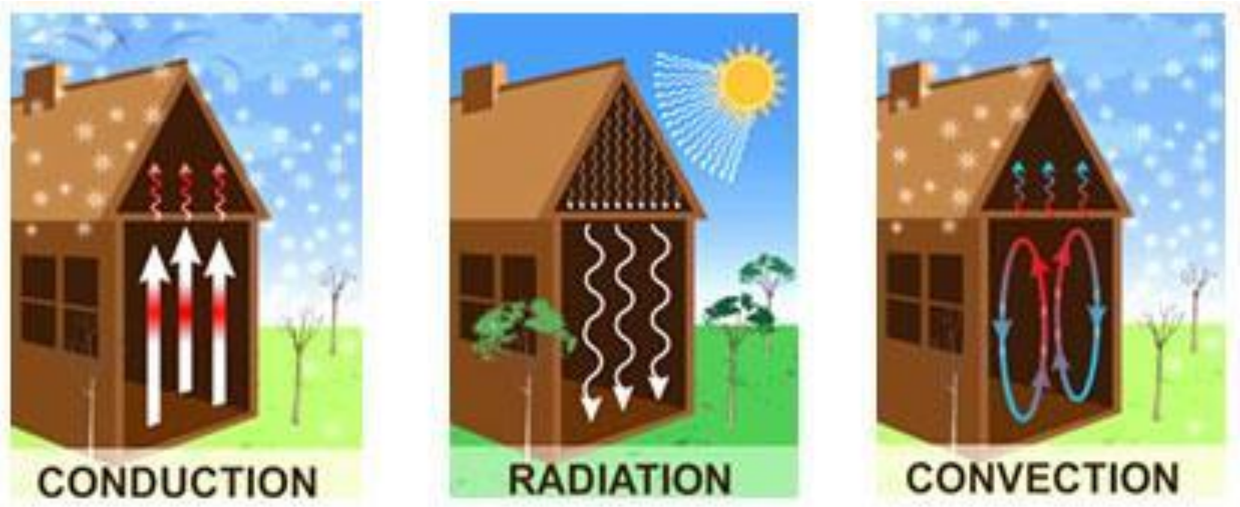
-Rudolph Clausius

- ***Energy moves from higher state to lower state –(the second law of thermodynamics)***
- ***Heat moves from warm to cold (thermal gradient)***
- ***Moisture moves from more to less (concentration gradient)***

✓ ***Heat*** moves from warmer to cooler.

✓ ***Air*** moves from higher pressure to lower pressure.

✓ ***Moisture*** moves from wetter to drier.



BUILDING PHYSICS (HEAT TRANSFER IN BUILDINGS)

Heat Transfer Calculations in Buildings

Conduction- Transfer of energy due to internal vibrations of envelop building material.

Convection- Transfer due to air infiltration from door windows.

Radiation- Transfer of heat through windows and transparent surfaces in form of electromagnetic waves.

Note:

- ✓ *ECBC/ENS regulates the U-Factor and SHGC for materials and glazing units.*
- ✓ *Solar incident radiation depends on the weather condition and solar altitude angle.*

$$Q_{Conduction} = U \cdot A \cdot (\theta_i - \theta_s)$$

Q = Heat transfer through conduction
U or U-factor = Overall heat transfer co-efficient (W/(m2·K)
A = Surface area
delta T = Temperature difference across surface; $T_{in}(\theta_i) - T_{out}(\theta_s)$ (K)

$$Q_{Convection} = h_{cv} \cdot A \cdot (\theta_s - \theta_f)$$

Q_c = Heat transfer through convection
h_{cv} = Heat Transfer Coefficient
θ_s=Temperature of the surface
θ_f=Temperature of the fluid

$$Q_{Radiation} = SHGC \cdot A \cdot E_t$$

Where:
SHGC = solar heat gain coefficient
E_t = incident solar radiation
A = area of transparent element

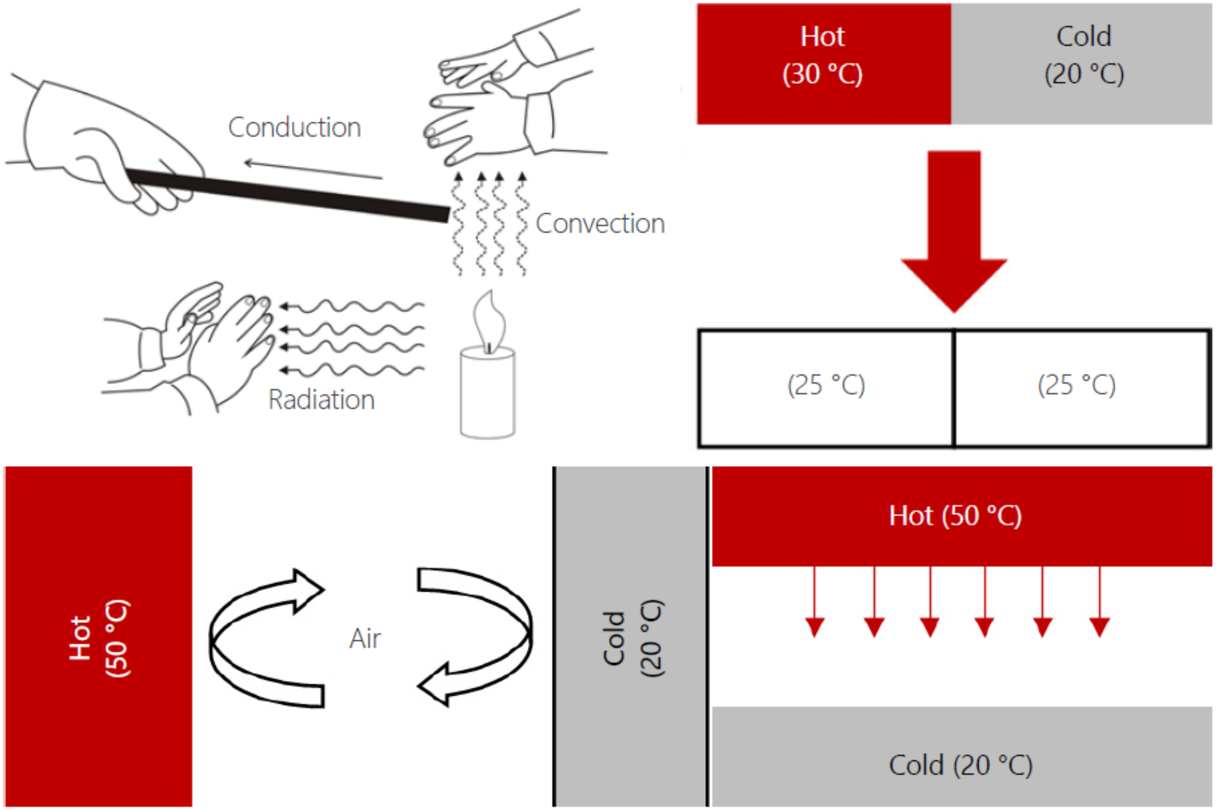
BUILDING PHYSICS

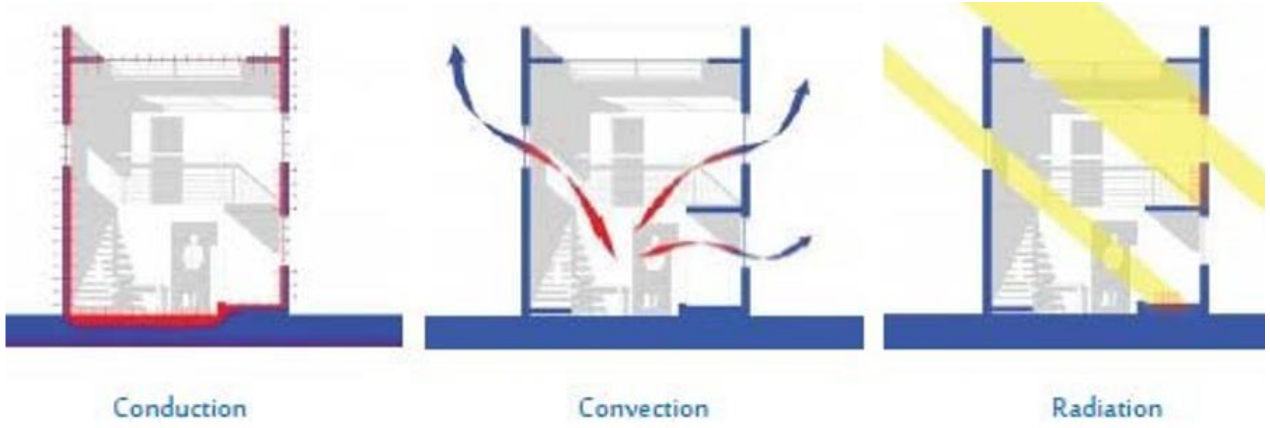
Heat Transfer in Buildings

Conduction- Transfer of heat through direct contact

Convection- Transfer due to movements of gases, liquid, and vapor.

Radiation- Transfer of heat through electromagnetic waves.





Clockwise- Forms of heat transfer; Conduction; Radiation; Convection

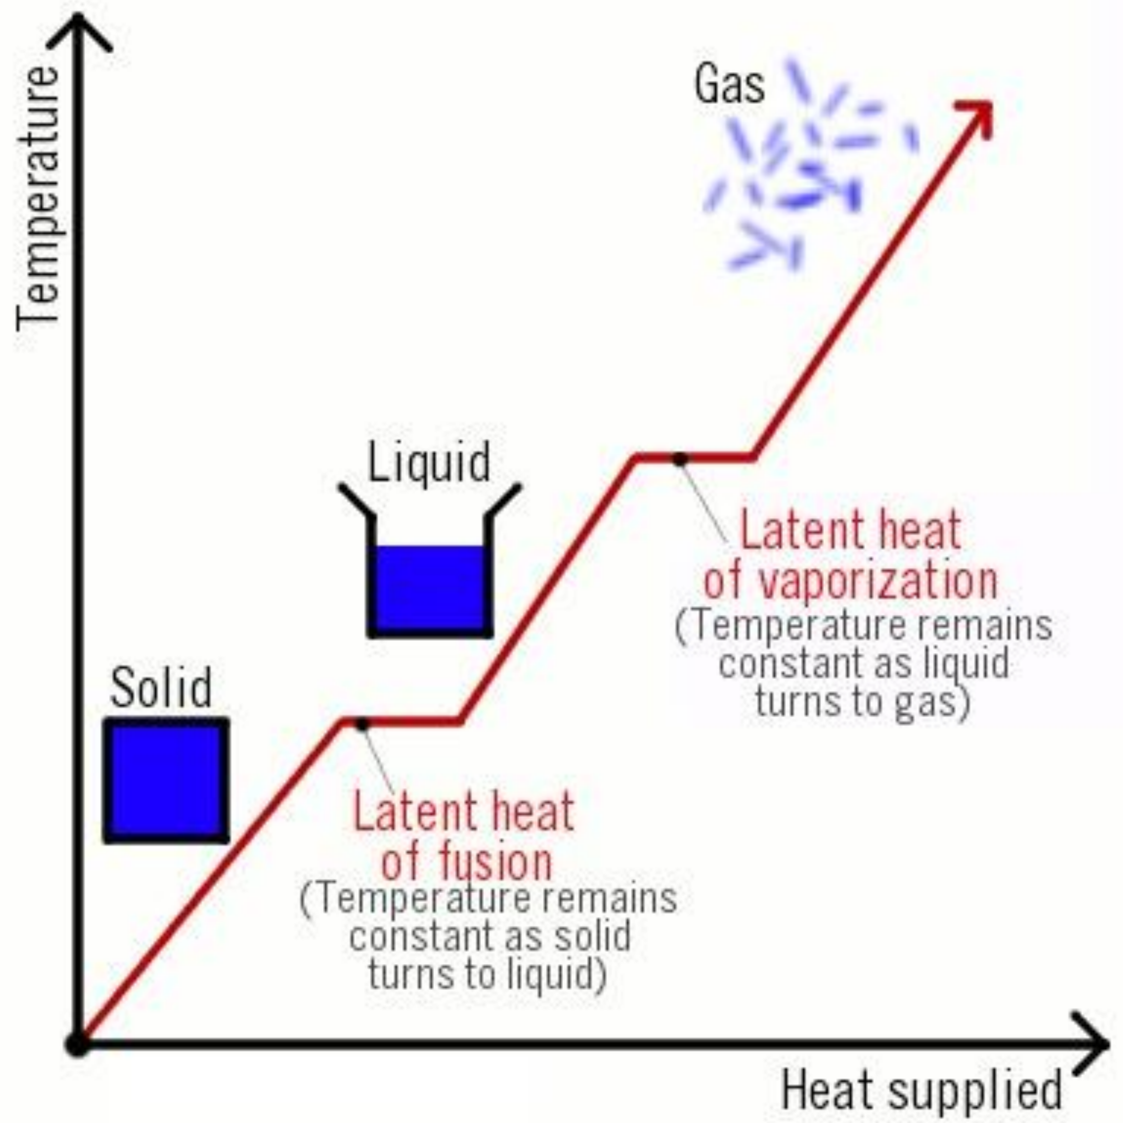
BUILDING PHYSICS (SENSISBLE & LATENT HEAT)

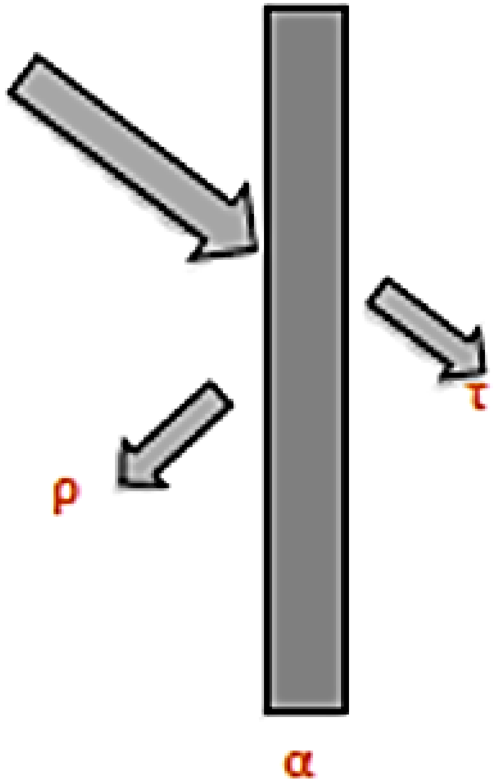
Sensible Heat **–** When the temperature of an object falls/rises, the heat removed/added is called 'sensible heat'. Sensible heat results in a change in temperature.

Latent Heat- Latent heat is the heat added/removed to an object in order for it to change its state. It affects the moisture content which results in a change of temperature.

Total flow of heat is the algebraic sum of sensible and latent heat within space.



Solar Radiation = Reflection + Absorption+ Transmission



$\rho \rightarrow$ Reflectance

$\alpha \rightarrow$ Absorption

$\tau \rightarrow$ Transmittance

$$\rho + \alpha + \tau = 1$$

$$\rho = \frac{\text{Reflected radiation}}{\text{Incident radiation}}$$

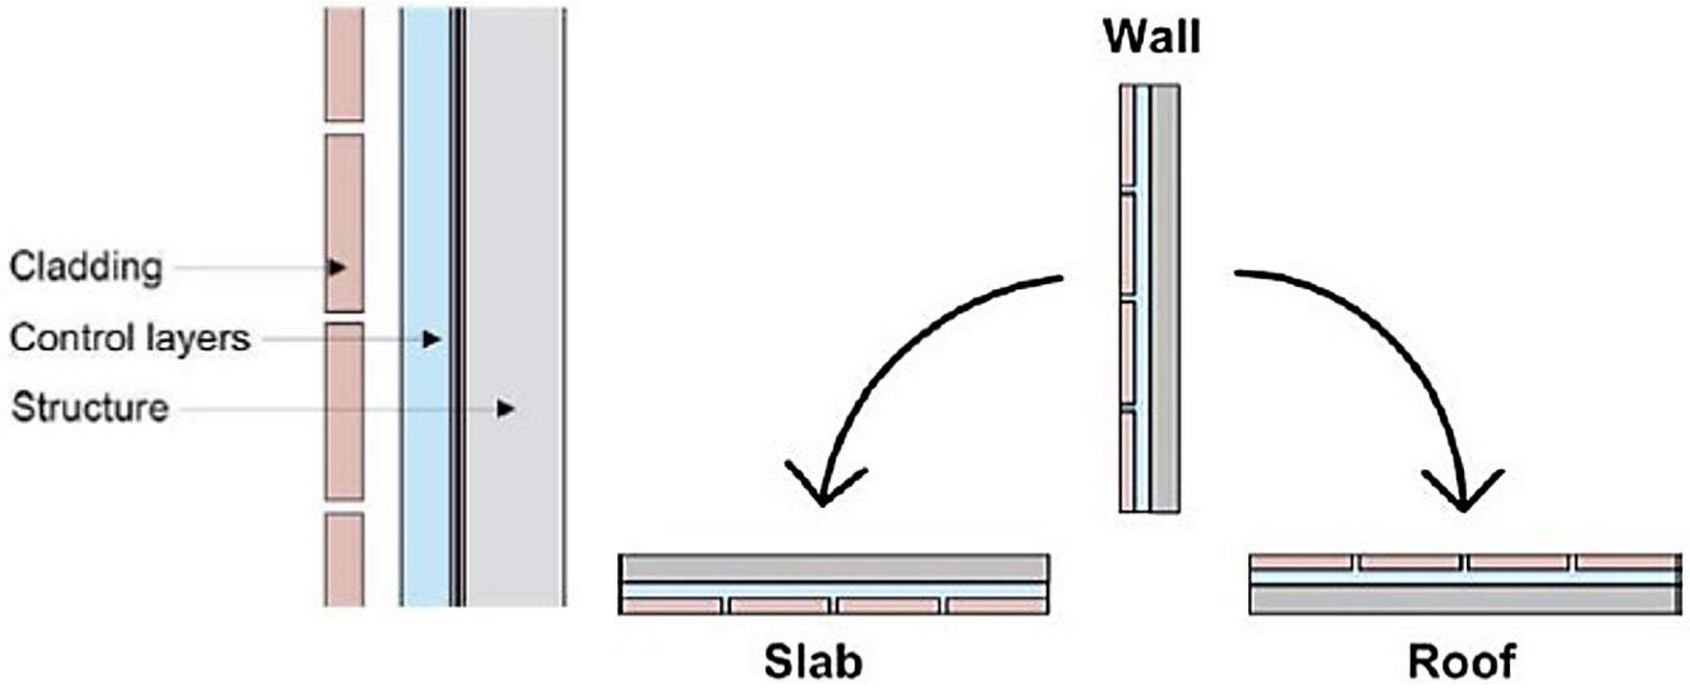
$$\alpha = \frac{\text{Absorbed radiation}}{\text{Incident radiation}}$$

$$\tau = \frac{\text{Transmitted radiation}}{\text{Incident radiation}}$$

BUILDING PHYSICS (BUILDING CONTROL LAYERS)

Building *Control Layers*

- ✓ ***Water*** Control Layers
- ✓ ***Air*** Control Layers
- ✓ ***Vapour*** Control Layers
- ✓ ***Thermal*** Control Layers



WATER CONTROL LAYER (WATER PENETRATION)

- ✓ Water is governed by momentum, gravity, and capillary forces.
- ✓ Impervious to water, continuous, flexible, and sealed.
- ✓ Provisions for drainage to the exterior.

BUILDING PHYSICS (BUILDING CONTROL LAYERS)

AIR CONTROL LAYER (INFILTRATION/EXFILTRATION)

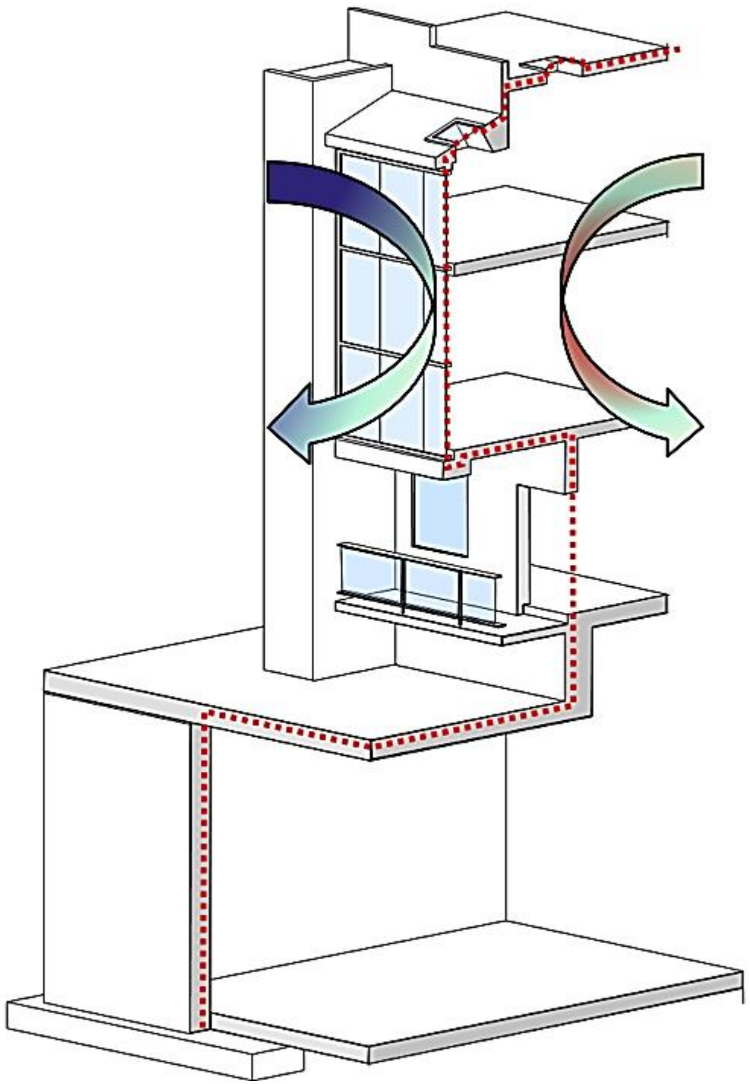
- ✓ Air movement is caused by wind loads, fan pressure, and stack effect.
- ✓ Must be continuous, flexible, strong, and sealed.

VAPOR CONTROL LAYER (MOISTURE FLOW)

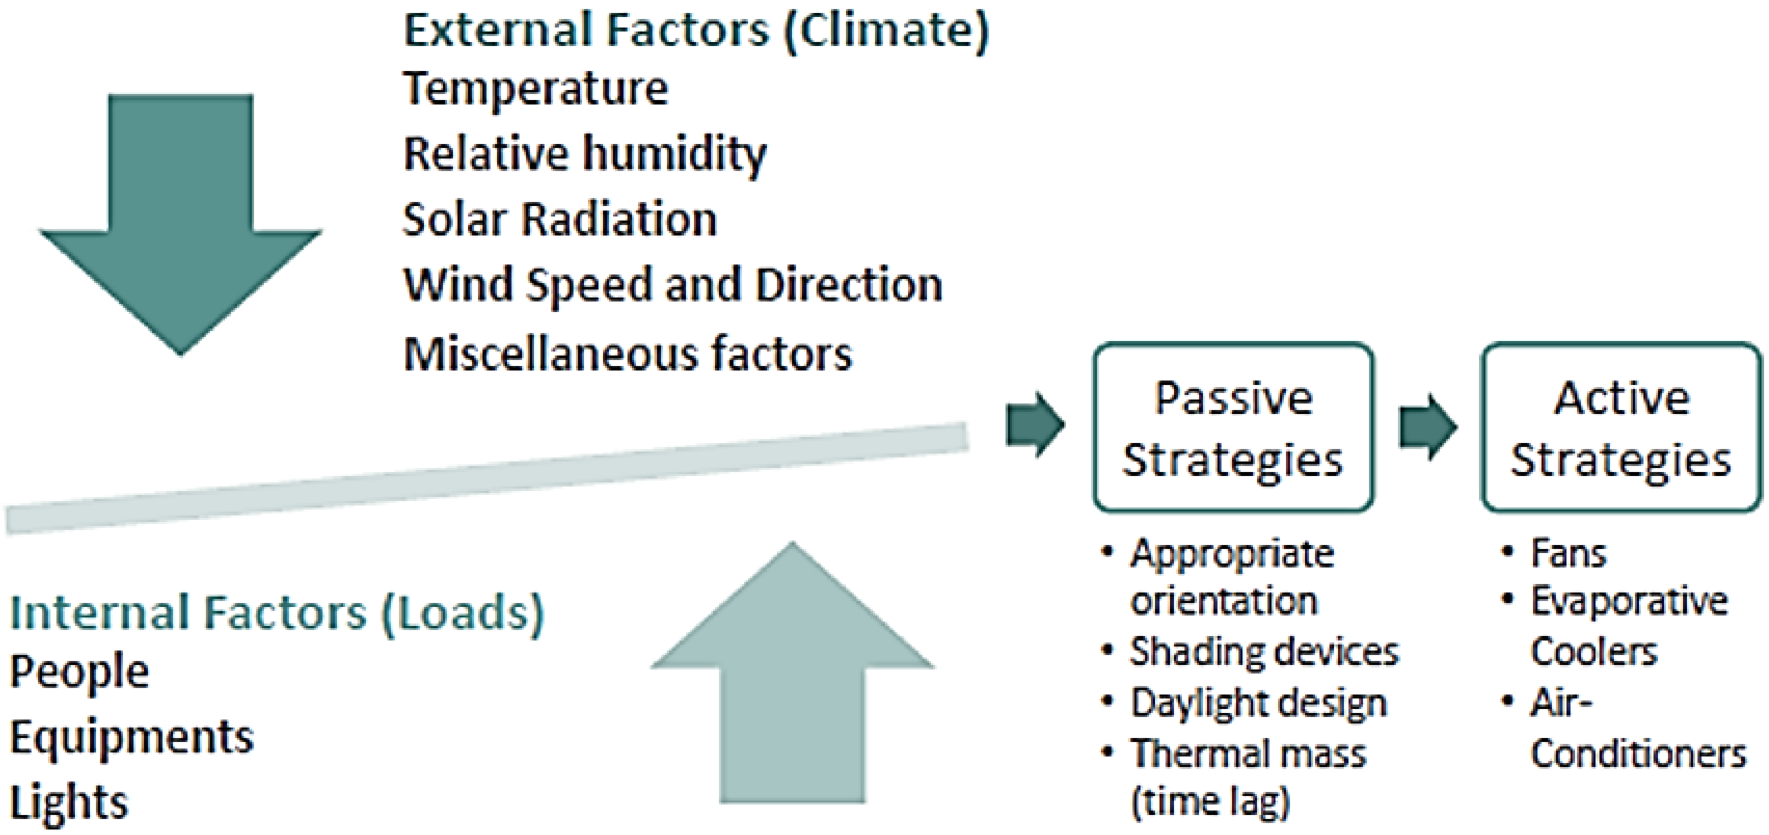
- ✓ Vapor diffusion is caused by vapor pressure differences inside to outside.
- ✓ Must not trap moisture.

THERMAL CONTROL LAYER (HEAT FLOW)

- ✓ Continuous insulation layer in conjunction reduces energy consumption.



Use of Building Physics to Optimize Energy use for Thermal Comfort



External Factors.(Climatic)

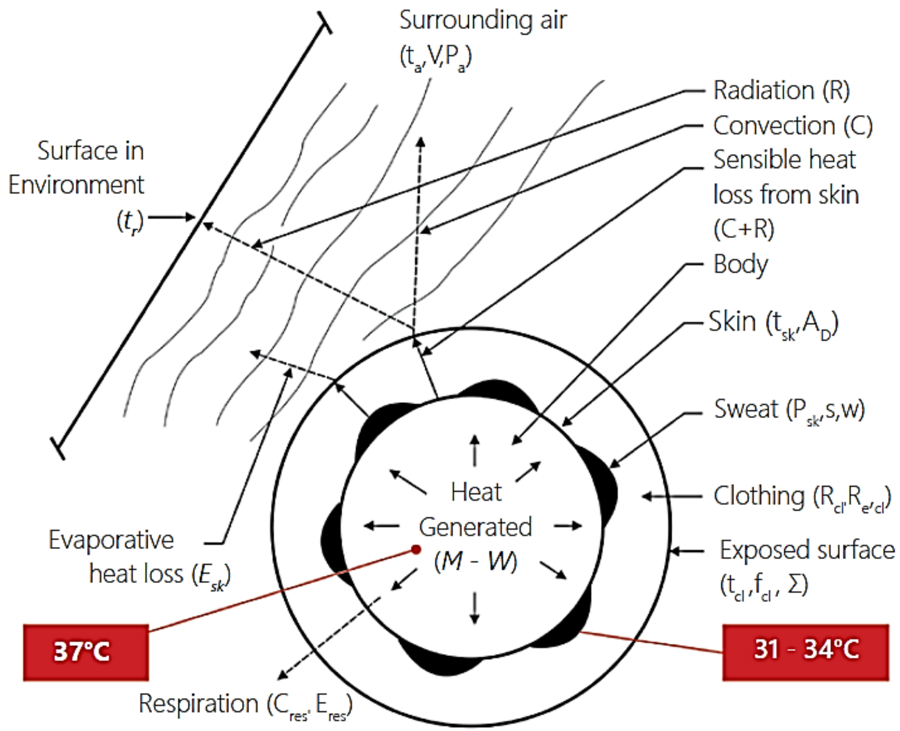
HEAT BALANCE AND ADAPTIVE THERMAL COMFORT

Heat Balance Method

The heat balance method presents a physics based mathematical model that establishes thermal comfort when heat loss from the body is exactly equal to heat produced within the body.

The heat balance method approaches thermal comfort from a biological perspective.

- **If heat generation rate > heat loss rate, individual will feel warm/ hot**
- **If heat generation rate < heat loss rate, individual will feel cool/ cold**
- **For thermal comfort, heat generation rate = heat loss rate**



Comfort Theory - Heat Balance Method
Source: Fantozzi, F., & Lamberti, G. (2019). Determination of thermal comfort in indoor sport facilities located in Moderate Environments: An overview. Atmosphere, 10(12), 769. https://doi.org/10.3390/atmos10120769

HEAT BALANCE AND ADAPTIVE THERMAL COMFORT

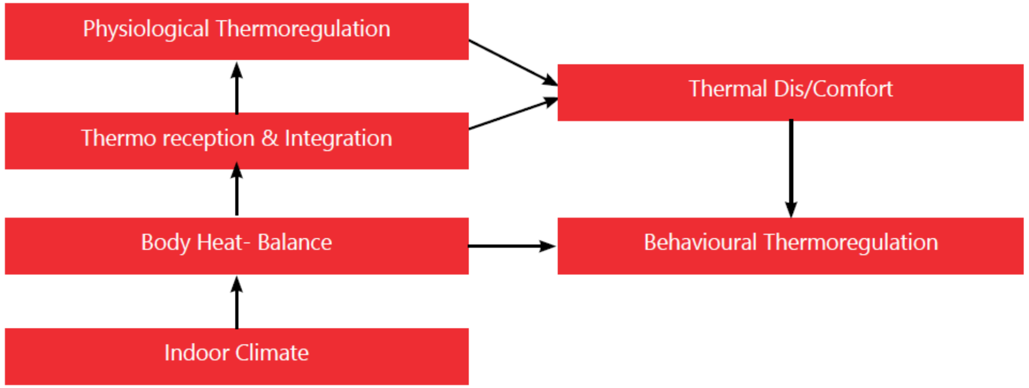
Adaptive Thermal Comfort Method

Adaptive thermal comfort model takes into consideration all three-

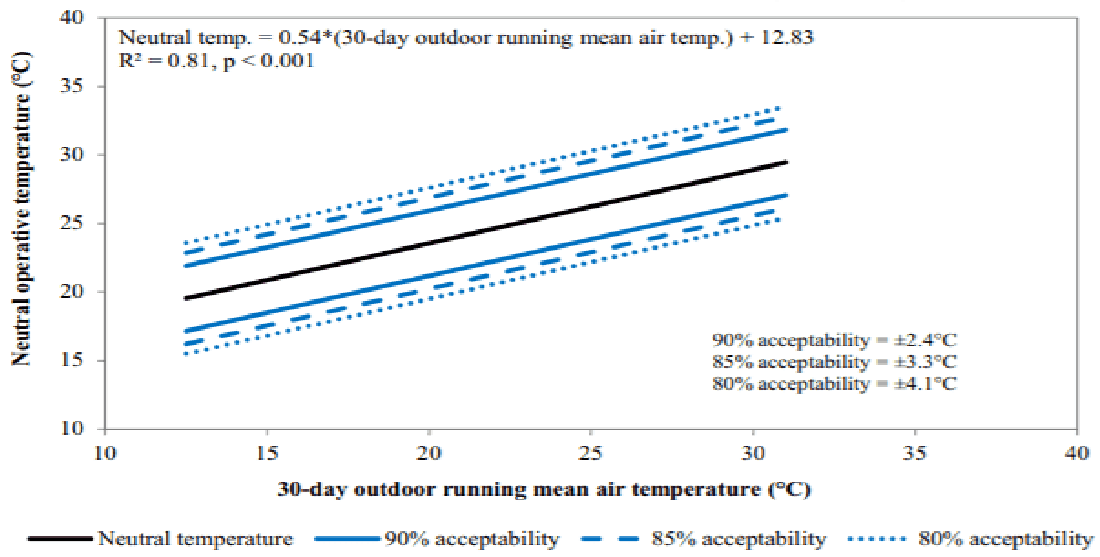
- **Physiological,**
- **Psychological,**
- **Behavioural**

aspects of occupants and their influence on perception of thermal comfort.

It prescribes indoor setpoint temperature to address 90% acceptability of thermal environment among occupants.



Comfort Theory: Adaptive Thermal Comfort Method



IMAC model for naturally ventilated buildings.

LOCAL THERMAL DISCOMFORT

Local Thermal Dis-Comfort

Studies have identified that it is possible for occupants to feel uncomfortable even if they feel thermally neutral overall. This usually happens when one or more parts of their body are either too warm or too cold.

- Local thermal discomfort is also a reason why it is highly unlikely for indoor spaces to achieve 100% thermal acceptability.
- To accommodate this, most standards like ASHRAE/IMAC specify conditions to ensure 80% acceptability of the thermal environment amongst occupants.

SESSION-4
Passive Strategies & Building Materials

1. *Affordable housing & passive design strategies*
2. *Innovative building materials (wall, glazing & roof)*
3. *Case studies*

AFFORDABLE HOUSING & PASSIVE STRATEGIES

Strategies for various modes of heat transfer

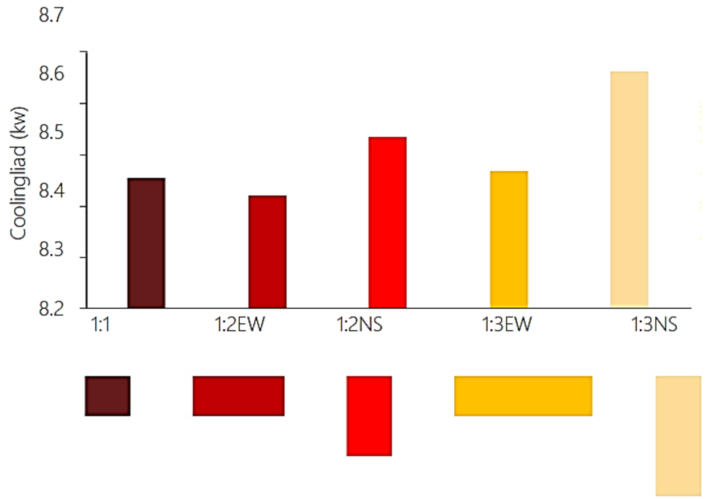
Passive design strategies may tackle either one or a combination of these modes of heat transfer.

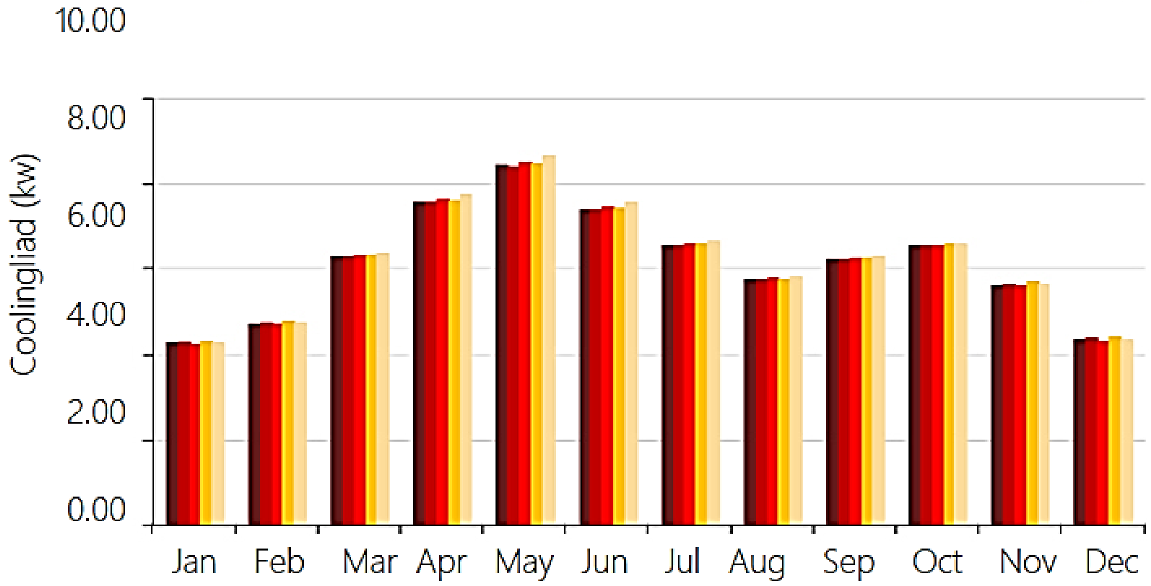
- Orientation, and massing of the building act as passive design strategies by influencing the quantity and quality of radiation reaching the envelope surface.
- Similarly, shading devices obstruct the amount of radiation entering the buildings through windows.
- Fixed or movable shading devices can be chosen depending on the trajectory of sun and direction of the façade.

Mode of heat transfer	Passive Design strategies applicable
Conduction	Materials and Construction
Convection	Space Volume, Building form- (Roof form, plan)
Radiation	Orientation Shading/ Brise Soleil, jail etc

Passive design strategies categorized based on modes of heat transfer

AFFORDABLE HOUSING & PASSIVE STRATEGIES



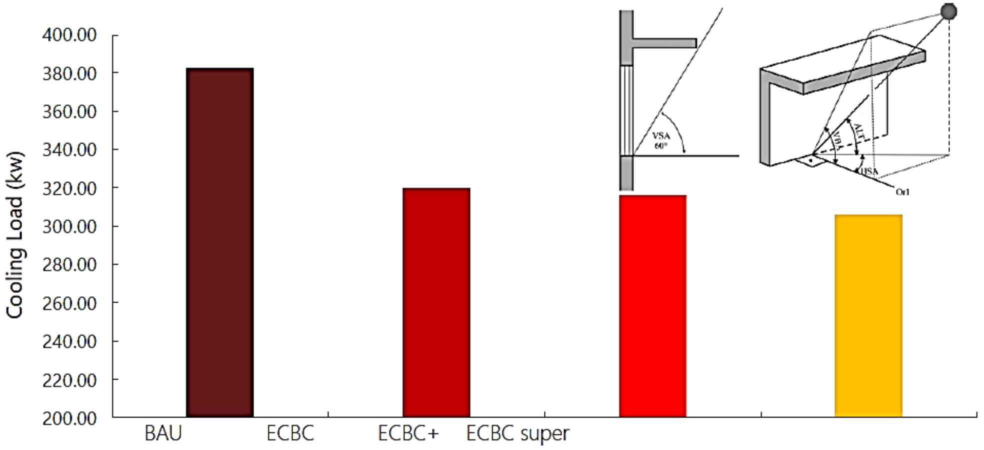


Form & orientation of the building

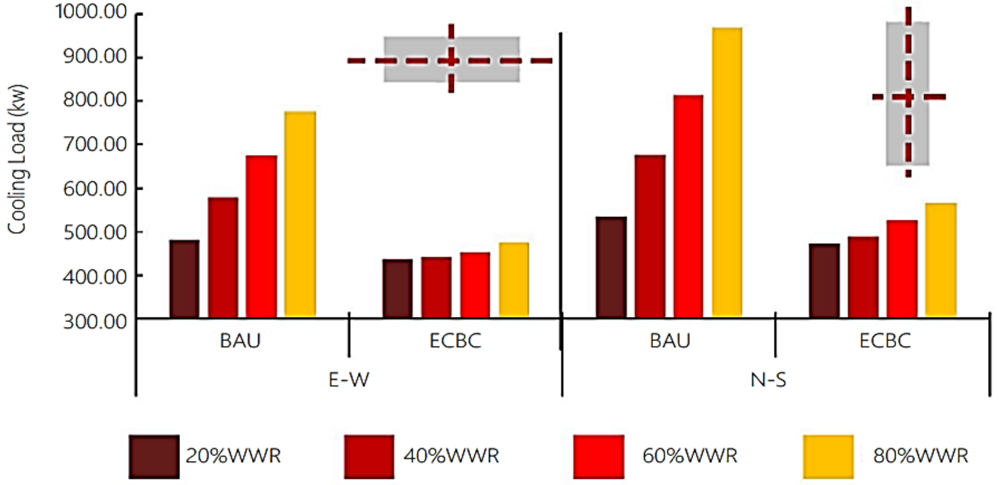
- Daylight penetration and fenestration design have implications on heat gain/loss through the building envelope.
- Careful orientation of fenestration can help achieve thermal and visual comfort
- Daylight harvesting from the north and south facade should be maximized with proper orientation of the building.

Top: peak cooling load for various forms and orientations; Bottom: variations in peak cooling load for each month for all sample cases.

AFFORDABLE HOUSING & PASSIVE STRATEGIES



Cooling loads for BAU, ECBC, ECBC+, and ECBC super buildings having 600mm shading over windows

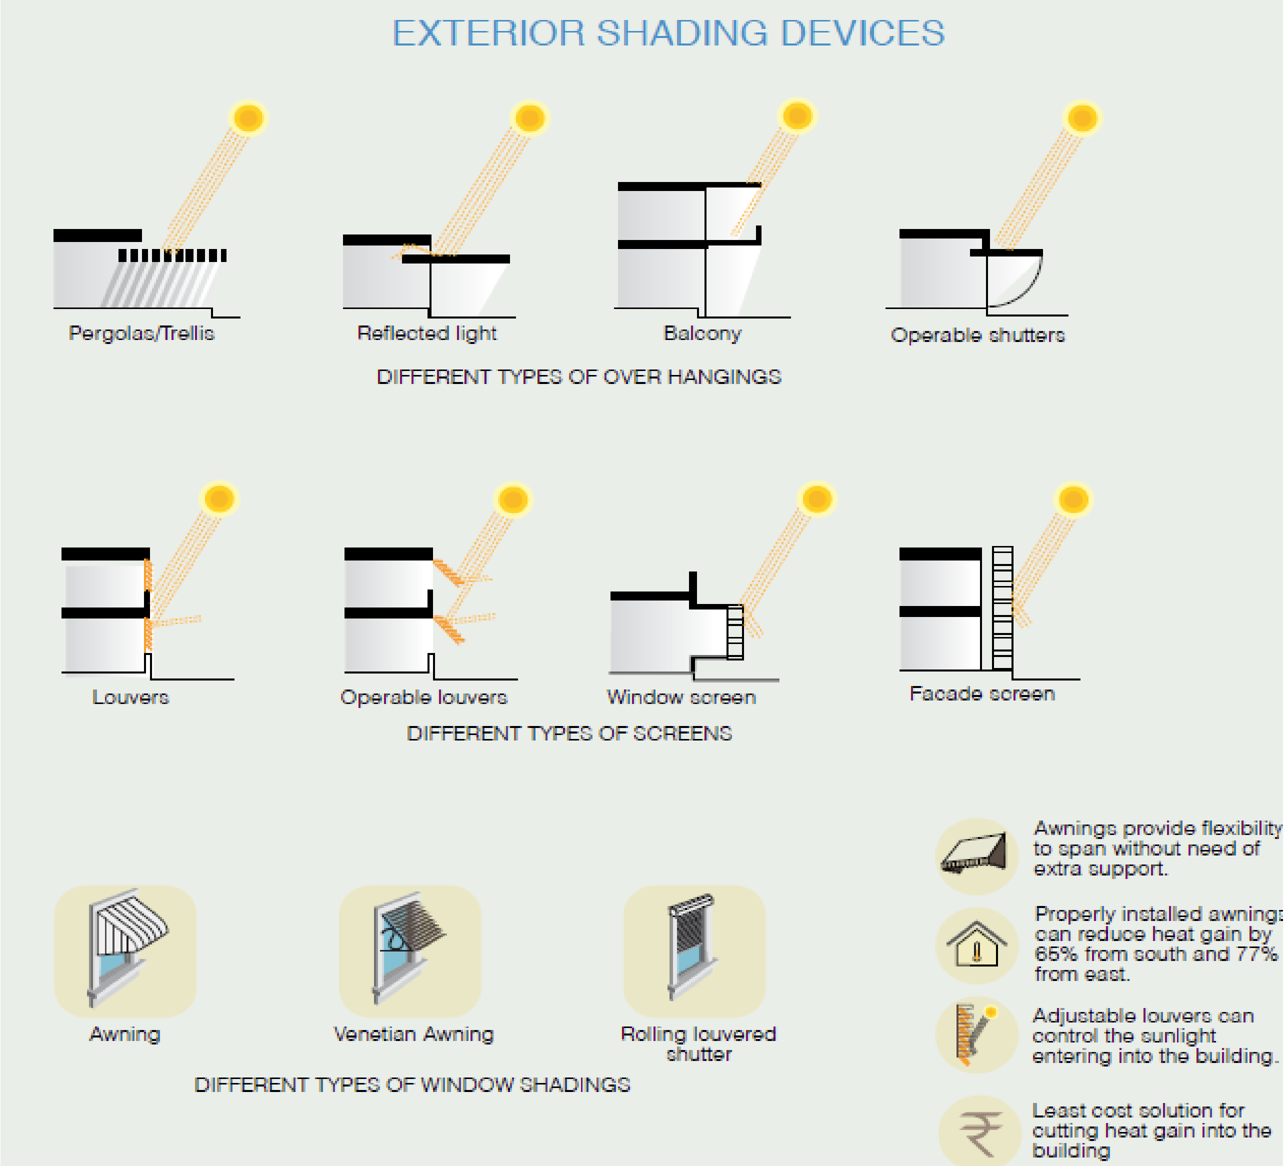


Comparative analysis of various WWR levels in East-West and North-South orientations for business-as-usual and ECBC compliant buildings

Shading & WWR

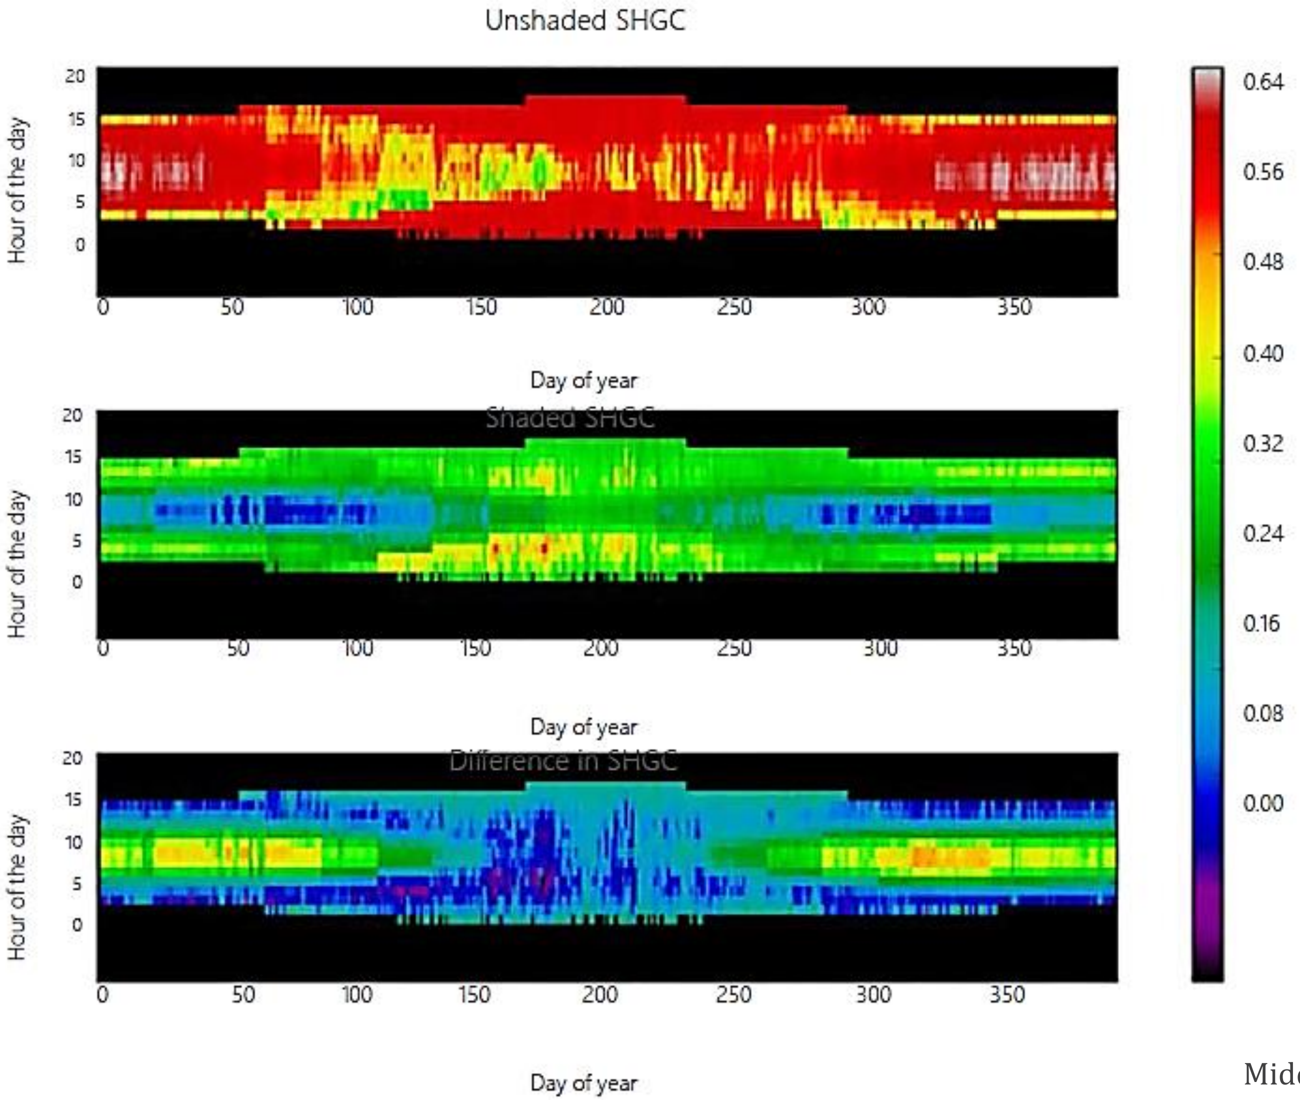
- Reduce heat gain and cooling energy use of the building.
- Dynamic movable external shading systems, vertical shading elements like fins are more useful in cutting radiations when the sun is at a lower altitude i.e., in East and West facades
- Greater WWR escalates the cooling load significantly in BAU cases. However, compliance with ECBC code results in reduced cooling load across the four WWR cases.

AFFORDABLE HOUSING & PASSIVE STRATEGIES



- Exterior shading devices can be provided in a variety of materials and designs, including sunshades, awnings, louvers, bamboo screens, jaali, and green cover through vines.
- These can be implemented with minimal cost implications and have the most favourable cost-benefit relation with respect to thermal comfort.
- To prevent summer overheating and glare, a good shading device strategy should be used with glazed openings.

AFFORDABLE HOUSING & PASSIVE STRATEGIES



- SHGC value of glass while maintaining desirable VLT and U-value. Hence, combination of multiple passive design measures can contribute to RETV value of 15 W/Sqm.

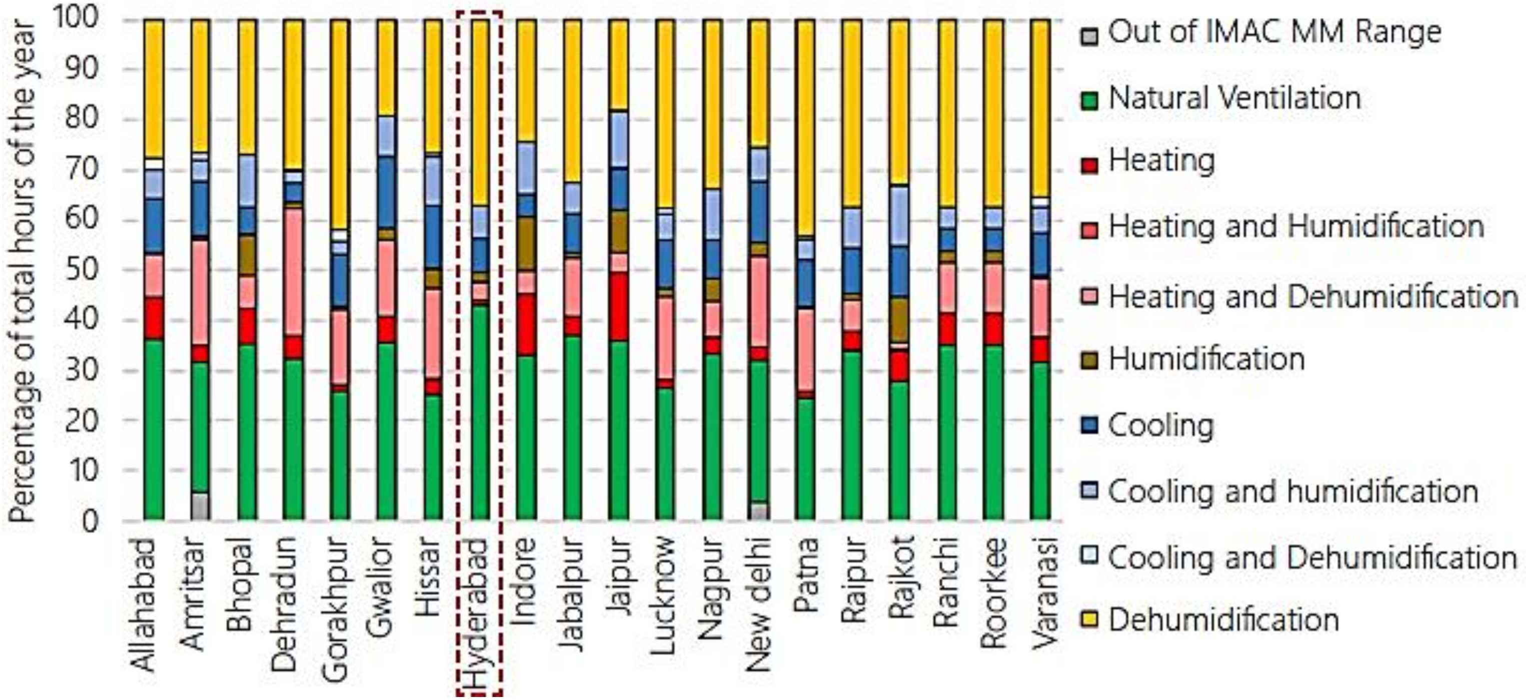
Top- SHGC values of an unshaded window throughout the year;
Middle- SHGC values of the same windows in case of shading present throughout the year;
Bottom- Difference in SHGC values of the first two graphs.

AFFORDABLE HOUSING & PASSIVE STRATEGIES

Natural ventilation

Natural ventilation is defined as provision of fresh air and removal of stale air using the naturally occurring forces of wind.

It can be observed in figure that natural ventilation as a standalone strategy can provide comfort for around 35% of the total hours of the year in hot-dry, warm-humid, and composite climates.

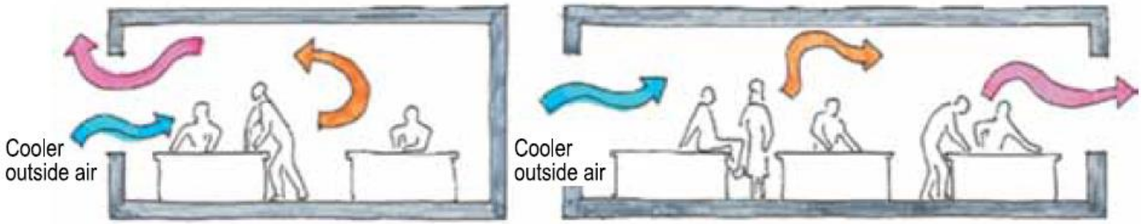


Percentage of comfort hours in a year for different building operation modes listed in IMAC-MM. Source: M., Shulka, Y., Rawal, R., Loveday, D., de Faria, L., Angelopoulos, C. (2020). Low Energy Cooling and Ventilation in Indian Residences Design Guide. CEPT Research & Development Foundation & Loughborough University. http://carbse.org/reports-and-articles/

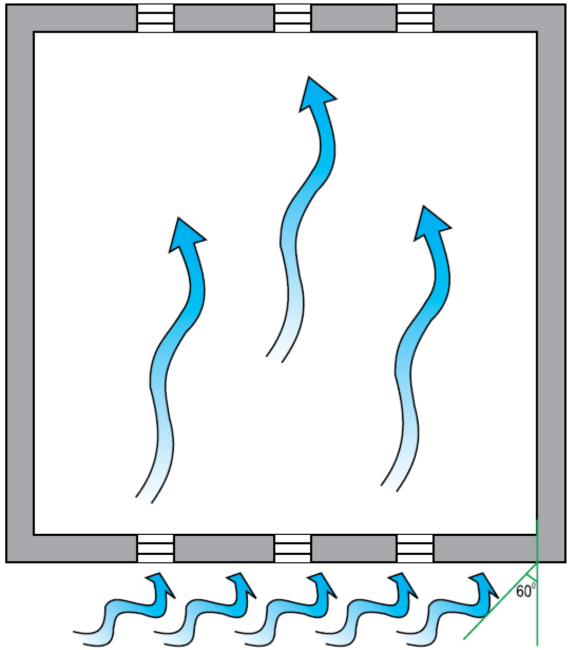
AFFORDABLE HOUSING & PASSIVE STRATEGIES

Natural ventilation

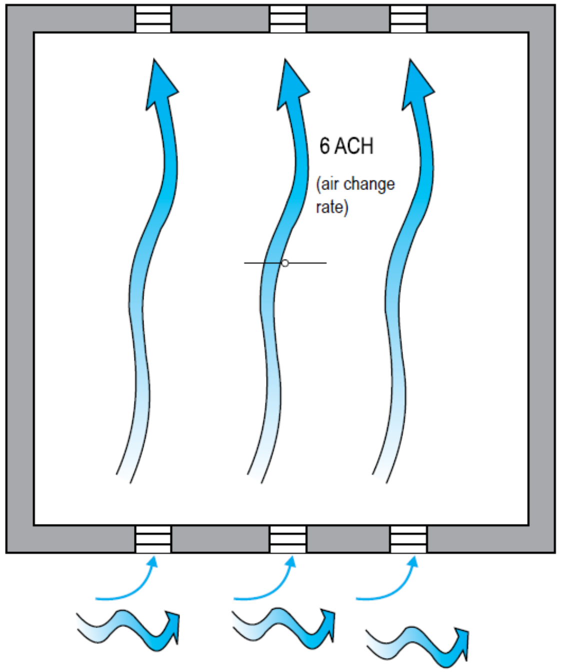
It is shown that the ACH improved from 6 ACH per hour to 14 ACH per hour with the use of the deflectors.



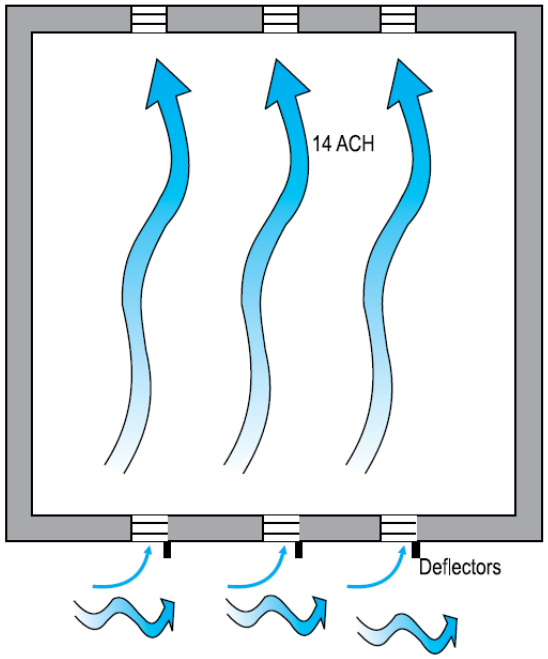
Principles of single-sided ventilation and cross-ventilation



Wind blowing at an angle of 60° from the perpendicular axis of the façade



Wind blowing parallel to the façade



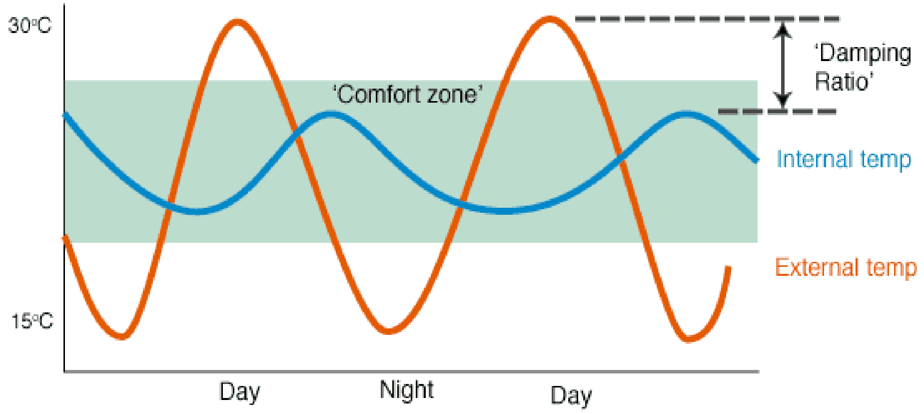
Deflectors that help in harnessing wind for natural ventilation

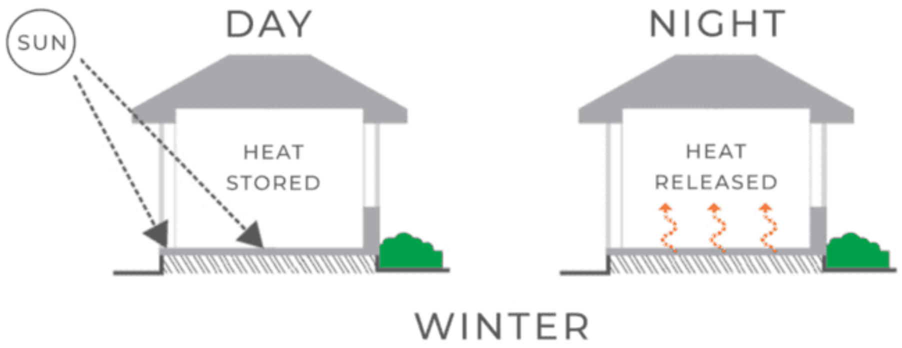
Source: Guidelines for Energy-Efficient and Thermally Comfortable Public Buildings in Karnataka

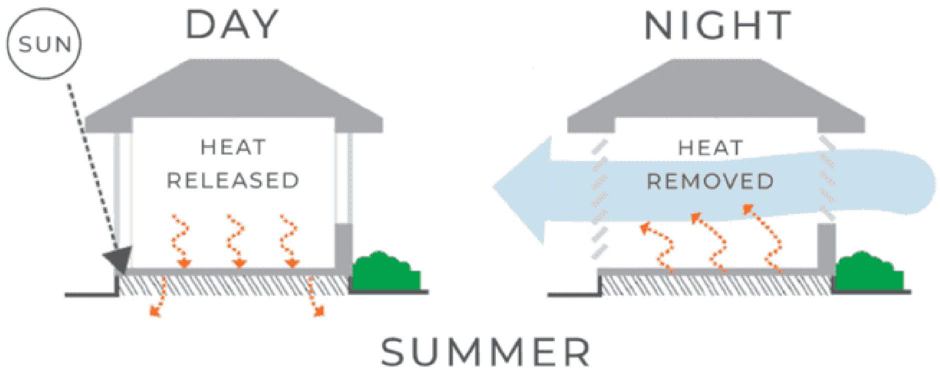
AFFORDABLE HOUSING & PASSIVE STRATEGIES

'Thermal mass' describes a material's capacity to absorb, store and release heat. A common analogy is thermal mass as a kind of thermal battery.

- **Denser thermal mass materials are more effective passive solar materials. Thus, denser the material the better it stores and releases heat.**
- **Do not substitute thermal mass for insulation. It should be used in conjunction with insulation.**







AFFORDABLE HOUSING & PASSIVE STRATEGIES

To understand the quantum of heat gain through various components of the envelope, the top and intermediate floors of the N–S oriented rectangular building with no windows on the east and west was simulated.

1. **For the intermediate floor, the heat gained through windows is much higher compared to the heat gained through walls.**
2. **For the top floor, it is seen that the heat gain from the roof is highest, while the heat gain from windows is also significant.**

Components of a building envelope	Properties	Heat gain from roof (kWh)	Heat gain from wall (kWh)	Heat gain through windows (kWh)
 Level: Intermediate floor 6 inch RCC slab with plaster (U-value: 3.8 W/m².K)	Built-up area: 1200 m² Floor-plate dimension: 14.0 x 28.6 m Orientation: N–S No windows on east and west Overhangs: 600 mm fixed Glazing type: Single clear 6 mm (U-value: 6.1 W/m².K, VLT: 88%, SHGC: 0.81) No heat exchange through upper and lower floors No internal loads Cooling set-point: 26 °C Fresh air + Infiltration: 1 ACH	0	93	3106
 Roof: 150 mm RCC slab with plaster (U-value: 3.8 W/m².K)		7293	–791[9]	2770

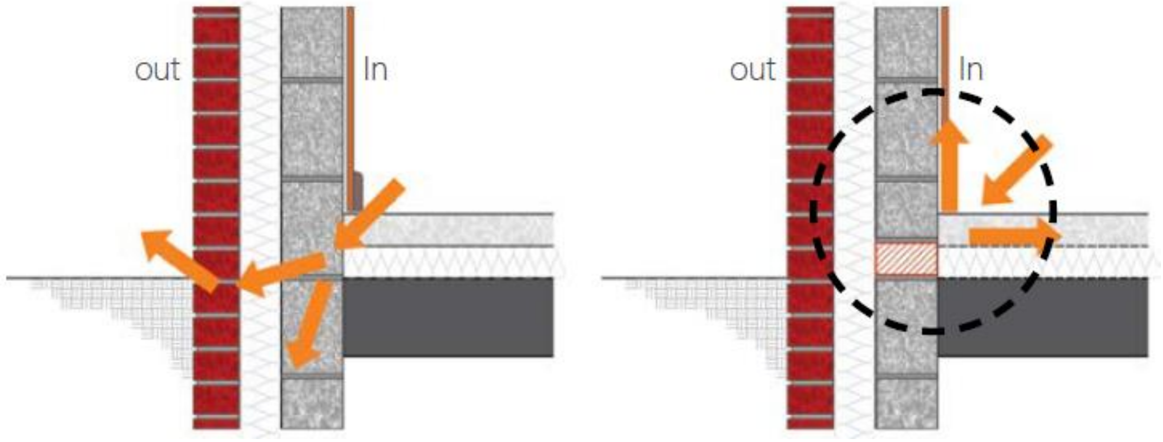
INNOVATIVE BUILDING MATERIALS (Wall, Glazing & Roof)

Thermal conductivity and thermal bridge

A **thermal bridge** is a part of the assembly (such as metal screws or nails) that allows direct heat transfer between indoors and outdoors due to interruptions in insulation.



Walling assemblies and thermal bridging.

INNOVATIVE BUILDING MATERIALS (Wall, Glazing & Roof)

Glazing assemblies

U value based on glass & frame configuration; Right- Orientation of assembly with respect to horizontal affects U-value

GUIDANCE ON U- VALUE, SHGC AND VLT FOR FENESTRATIONS

Design Factors that impact on U-value, SHGC, VLT Etc..

1. Climate Analysis
2. Optimum Orientation of Building
3. Shadow Analysis
4. Daylight Analysis

Don't in Indian climatic Context

- Do not use glass with very low U value and moderate SHGC.
- Do not assume dark tinted glass brings solar control
- Do not use un-insulated frames

Dos in Indian climatic Context

- Products with least SHGC and U value and optimum VLT.
- Optimum set of values for U-value, solar heat gain coefficient, and visible transmittance.
- Add overhead shading, use dark tinted glass at visible height and clear at higher levels.

Note: *Remember that same fenestration product behaves differently w.r.t. the specific design. It should not be assumed that products with Low U-value and SHGC are best and universal solution.*

CASE STUDY- RAJKOT SMART GHAR III

RAJKOT SMART GHAR III

The climate of Rajkot is composite and the peak daytime temperatures during the summer reach 41°C-43°C.

Reducing heat gains through walls and roof:

Walling material was changed to 230mm thick AAC blocks. In doing so, the U-value of walls dropped to 0.8 W/SqmK from 2W/SqmK.

Improving Ventilation through shaft design:

A roof feature with exhaust fans on top of the shaft was added to create negative pressure in the shaft at all times

Reducing heat gains through window design and ventilation:

This design was changed to a taller partially glazed casement type for selected windows. The 90% openable casement windows allowed for better ventilation flow rates.

Site layout for Rajkot Smart GHAR-III (PMAY) project.

IMAC (INDIA MODEL FOR ADAPTIVE THERMAL COMFORT)

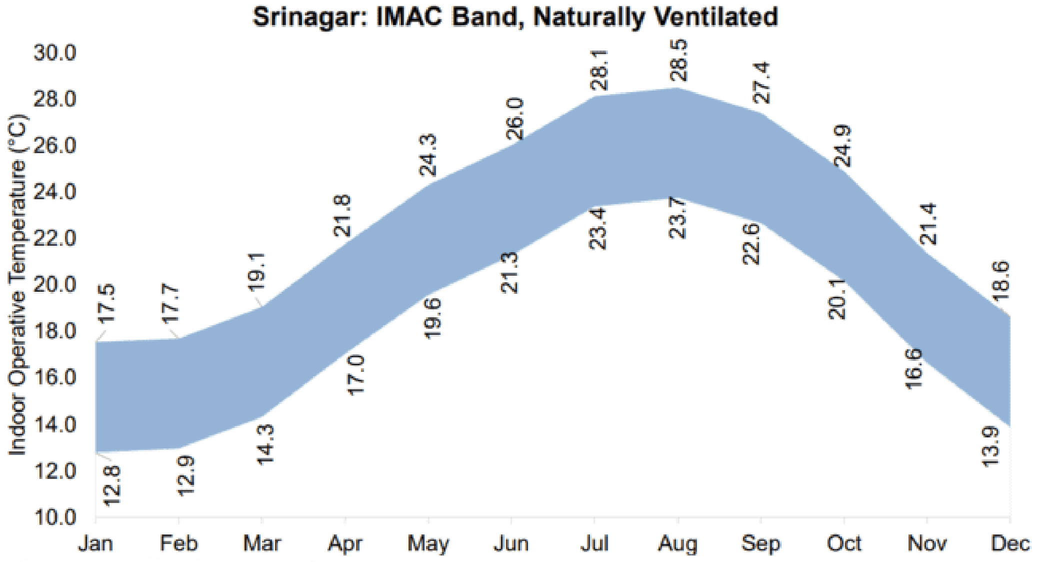
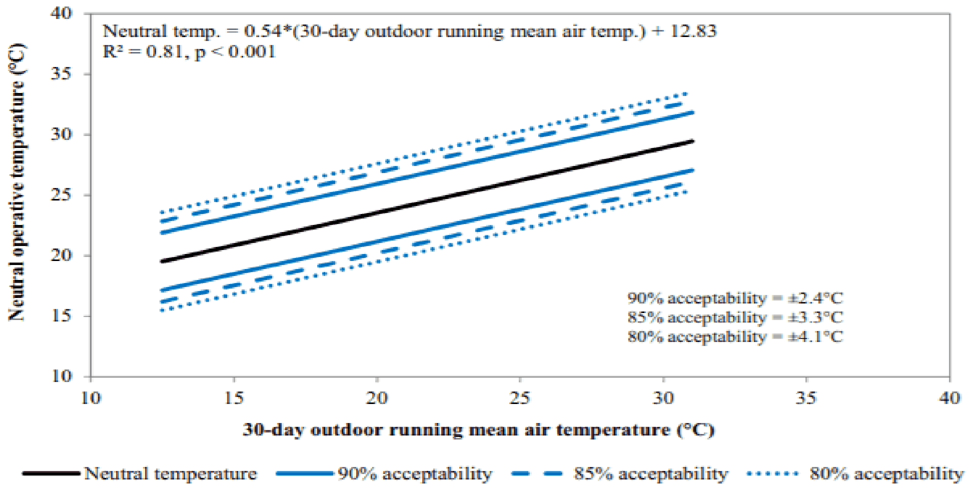
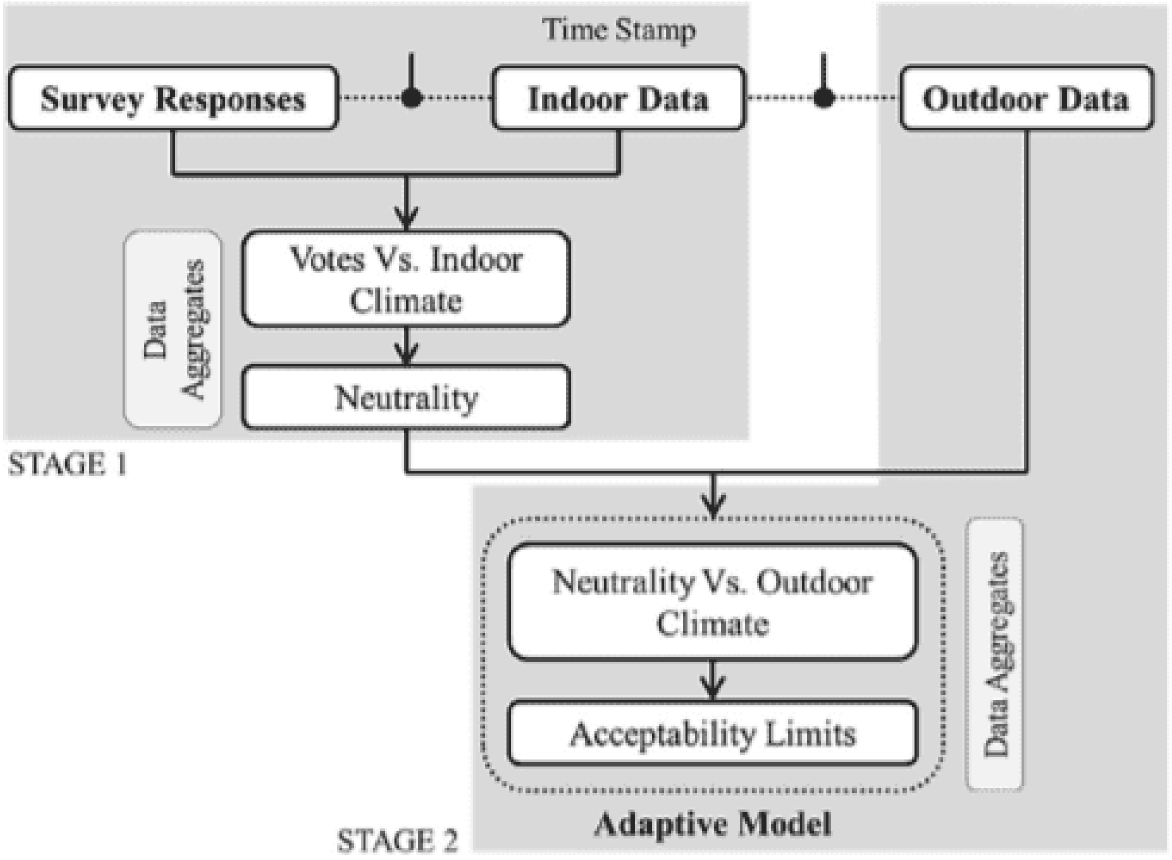
C
O
L
D



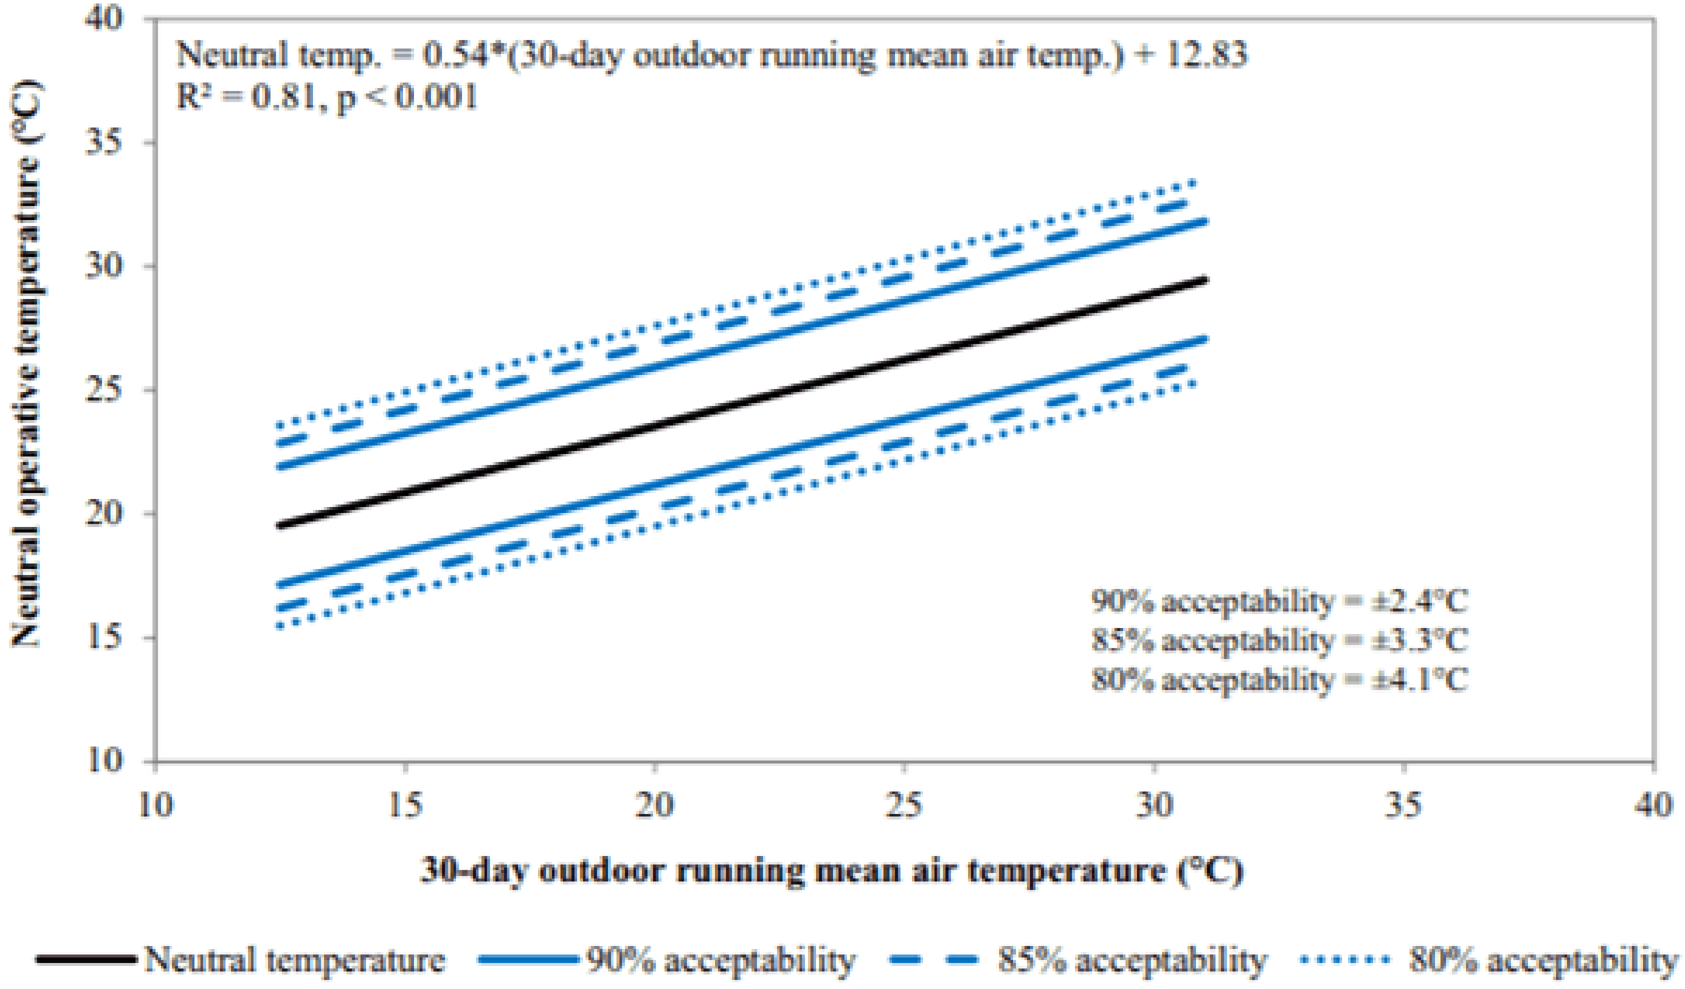


IMAC model for naturally ventilated buildings.

IMAC ANALYSIS STEPS



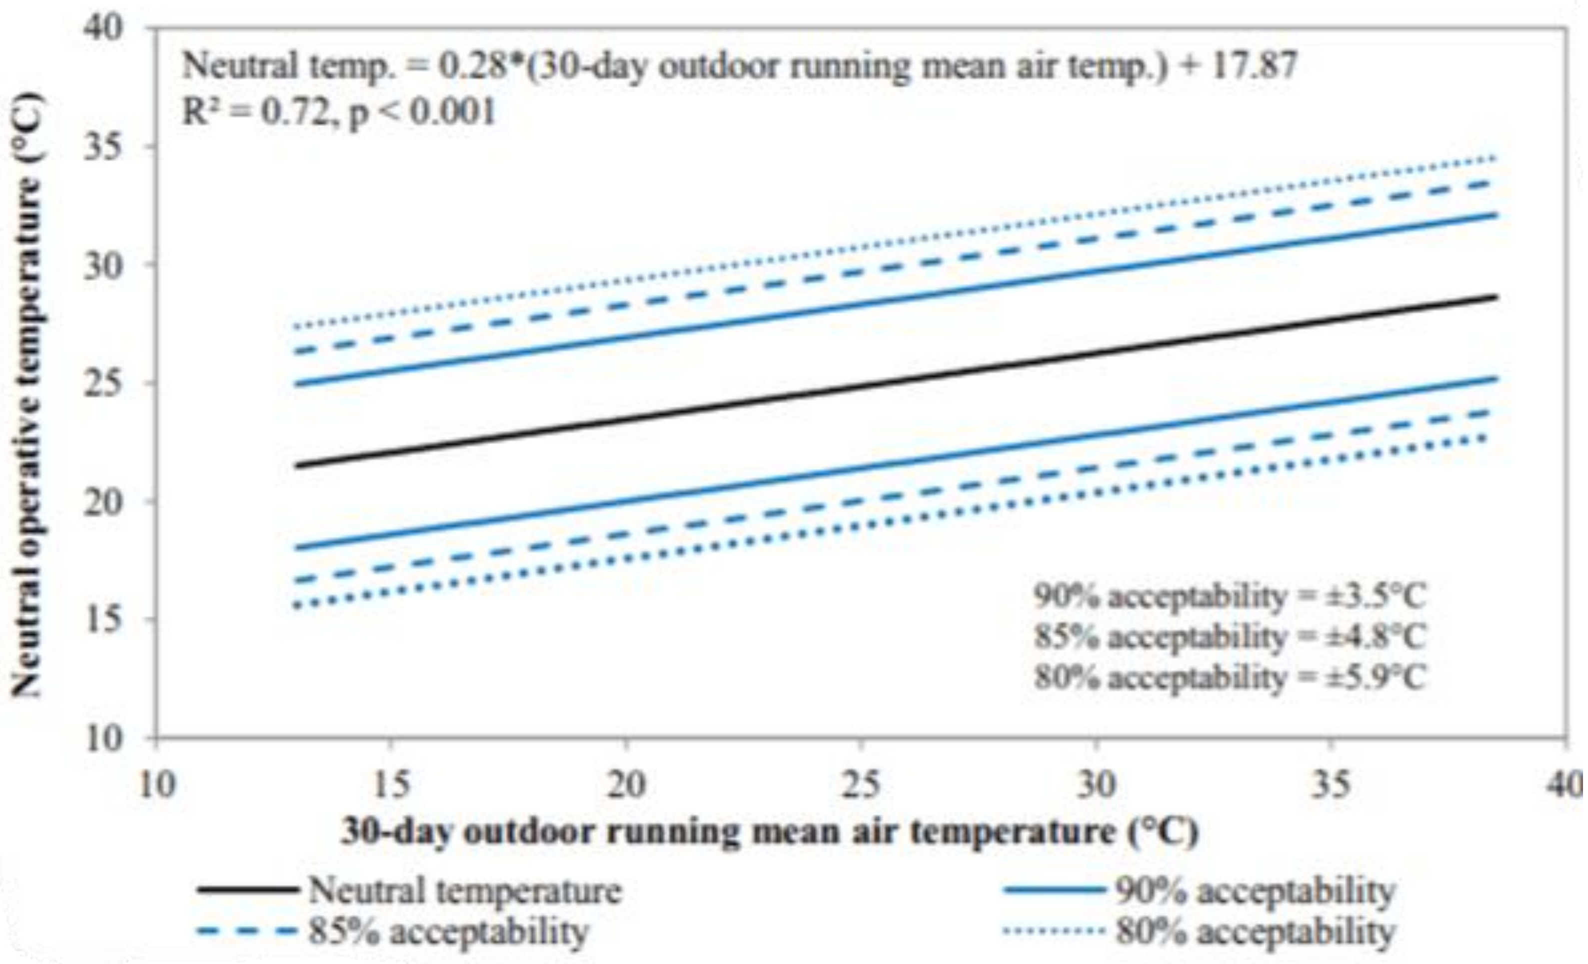
IMAC (INDIA MODEL FOR ADAPTIVE THERMAL COMFORT)



IMAC model for naturally ventilated buildings.

- The model indicates that occupants in NV buildings thermally adapt to the outdoor temperature of their location and the neutral temperature varies from 19.6 to 28.5 C for the above outdoor limits.

IMAC (INDIA MODEL FOR ADAPTIVE THERMAL COMFORT)



IMAC model for mixed mode buildings.

- The acceptability limits derived from the IMAC data are wider for MM buildings model than NV.
- This may be a result of the occupants knowing that the required comfort systems exist and will be operational when the external conditions are extreme.

Approved American National Standard ANSI www.ansi.org

ASHRAE *(American Society of Heating and Refrigeration Engineering)* Standard 55 specifies conditions for acceptable thermal environments and is intended for use in the design, operation, and commissioning of buildings and other occupied spaces.

ASHRAE 55 defines thermal comfort as "that condition of mind that expresses satisfaction with the thermal environment".

ASHRAE 55-2020 (THERMAL COMFORT STANDARD)

The standard was primarily designed for thermal comfort in spaces where occupants are in sedentary states (i.e., office work). However, it can also be employed to cover other types of indoor environments like residential and commercial spaces.

- The thermal conditions that ASHRAE-55 aims to achieve are applicable to healthy adult occupants, up to an altitude of 3K meters, where occupancy time must surpass 15 minutes.
- This standard does not take into consideration factors including air quality, acoustics, illumination, or contamination.

Adaptive comfort model as per ASHRAE 55	T_{comf}=0.31T_pma +17.8
80% Acceptability Upper limit (Eq + 3.5)	T_{comf}=0.31T_pma +21.3
80% Acceptability Lower limit (Eq - 2.5)	T_{comf}=0.31T_pma +14.3
90% Acceptability Upper limit (Eq + 2.5)	T_{comf}=0.31T_pma +20.3
90% Acceptability Lower limit (Eq - 2.5)	T_{comf}=0.31T_pma +15.3

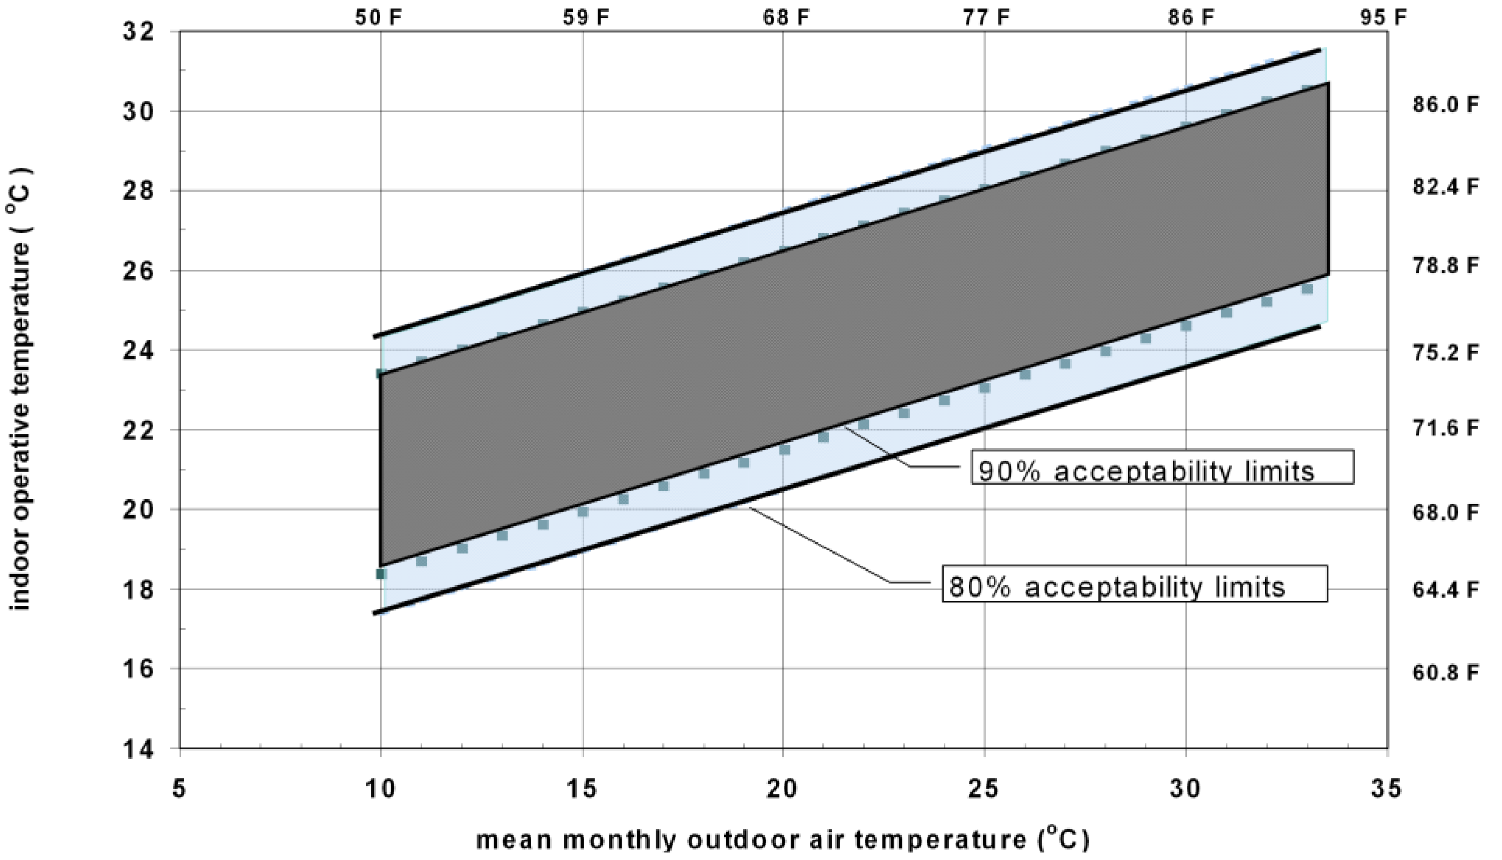
T_{comf}: Indoor comfort temperature corresponds to acceptable operative temperature

T_{pma}: Prevailing mean outdoor air temperature

ASHRAE 55-2020 (THERMAL COMFORT STANDARD)

ASHRAE-55 Optional Method for Determining Acceptable Thermal Conditions in Naturally Conditioned Spaces.

- In order for this optional method to apply, the space in question must be equipped with **operable windows** that are open to the outdoors and can be readily opened and adjusted by the occupants of the space.
- PMV and PPD are used to determine these acceptability ranges



Acceptable operative temperature ranges for naturally conditioned spaces

ENS(ECO NIWAS SAMHITA) 2018- INTRODUCTION

Why Eco-Niwas Samhita has been created?

- **Built Up Area -** India will add 3 Billion m^2 by 2030 of New residential building w.r.t Year 2018
- **Energy Demand -** There is a 4 times increase in energy demand for residential units from 1996 – 2016
- Projections show energy demand will be approximately between 630 TWh and 940 TWh by 2032

What is Eco-Niwas Samhita 2018?

- ECO-Niwas Samhita 2018 - an Energy Conservation Building Code for Residential Buildings.
- Launched on National Energy Conservation Day in 2018.
- Applicable to all residential units with plot area $\geq 500 m^2$
- (However, states and municipal bodies may reduce the plot area so that maximum residential buildings fall in the category of ENS compliance)

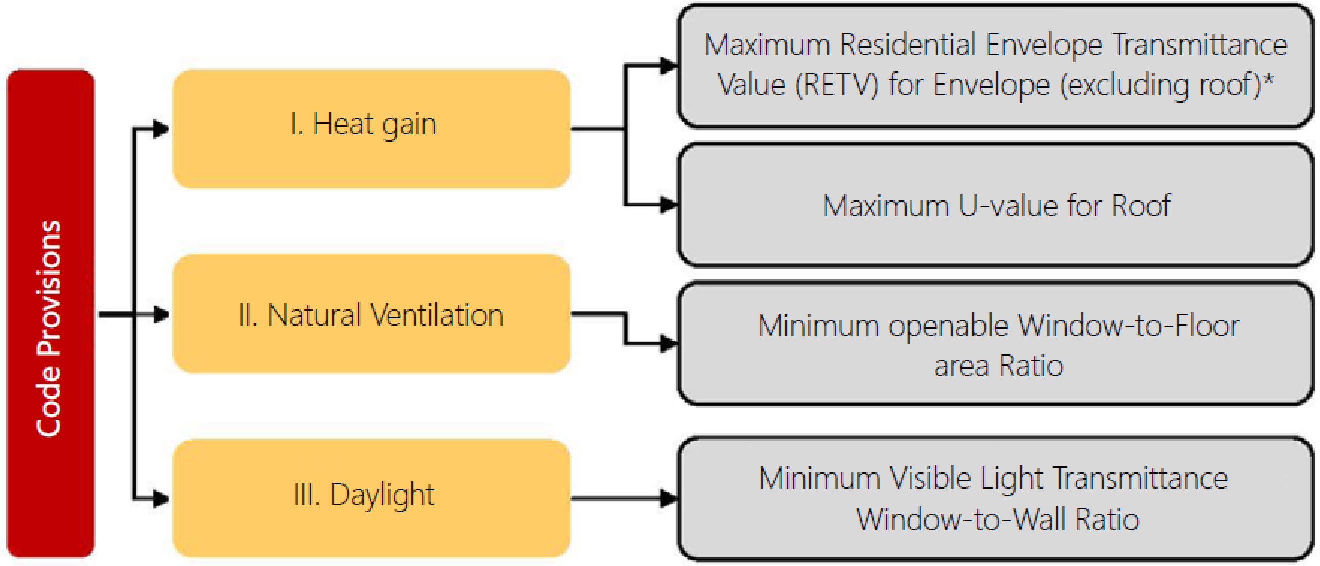
ENS (ECO NIWAS SAMHITA) 2018- INTRODUCTION

Why Eco-Niwas Samhita has been created?

- **Climate Responsive Building Design**
- **Efficient Building Envelope Design**
- **Energy Efficient Appliances** (5 Star A/C, Fridge, LED Lights Etc.)
- **Proper Maintenance of Electrical Appliances**

✓ **To Address The Above Factors Eco Niwas Samhita Was Created**

Code Provisions and Strategies of implementation



Metrics for various parameters mentioned in ENS-I

Tools to formalize strategies and encourage their implementation

ENS (ECO NIWAS SAMHITA) 2018- POLICIES FOR RESIDENTIAL BUILDINGS

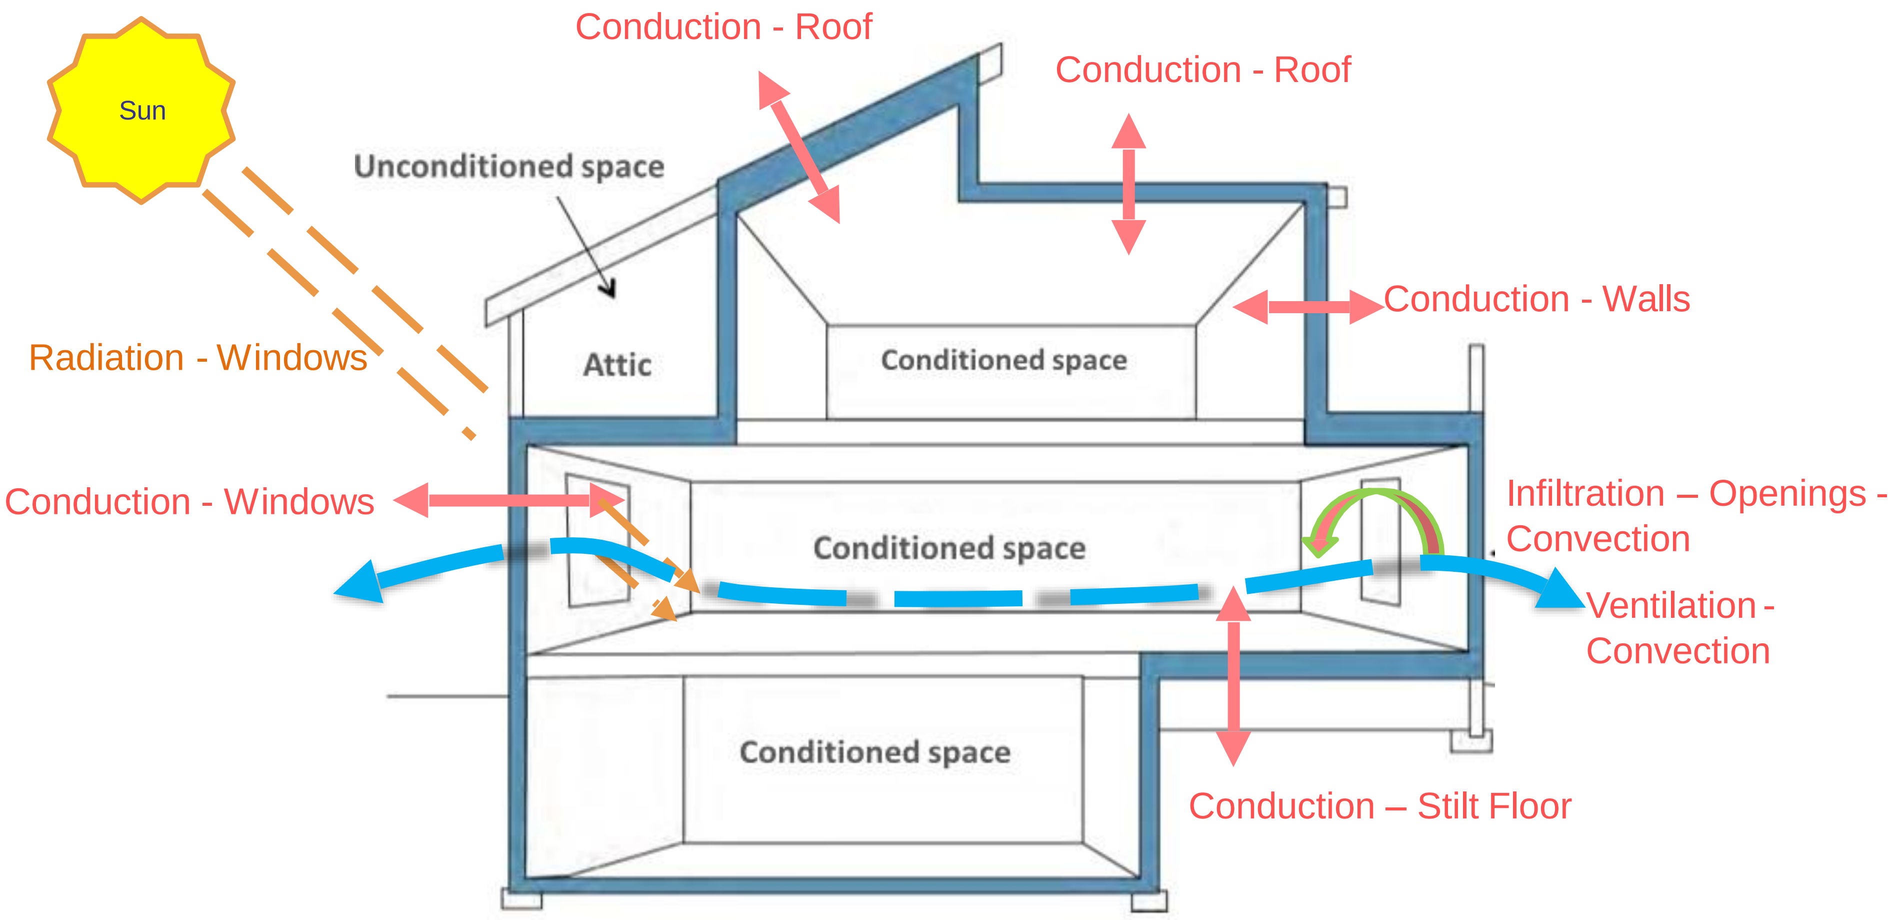
Building Envelope- Concepts



Building Envelope Design Is The Key Of Energy Efficient Residential Buildings

ENS (ECO NIWAS SAMHITA) 2018-BUILDING ENVELOPE

Code Compliant to:

1. Residential Building: Built up plot are >= 500m^2

2. Residential part of mixed land use building projects>= 500m^2.

Openable Window-to-Floor Area Ratio ($WFR_{openable}$)

- Openable **window-to-floor area ratio** ($WFR_{openable}$) indicates the potential of using external air for ventilation.
- Ensuring minimum $WFR_{openable}$ helps in ventilation, improvement in thermal comfort, and reduction in cooling energy.
- The openable window-to-floor area ratio ($WFR_{openable}$) is the **ratio of openable area to the carpet area of dwelling units.**

$$WFR_{op} = \frac{A_{openable}}{A_{carpet}}$$

Note:

$A_{openable}$: **Openable area (m^2);** it includes the openable area of all windows and ventilators, opening directly to the external air, an open balcony, 'verandah', corridor or shaft; and the openable area of the doors opening directly into an open balcony.

Exclusions: All doors opening into corridors. External doors on the ground floor, for example, ground-floor entrance doors or back-yard doors.

A_{carpet} : **Carpet area of dwelling units (m^2);** it is the net usable floor area of a dwelling unit, excluding the area covered by the external walls, areas under services shafts, exclusive balcony or verandah area and exclusive open terrace area, but includes the area covered by the internal partition walls of the dwelling unit.

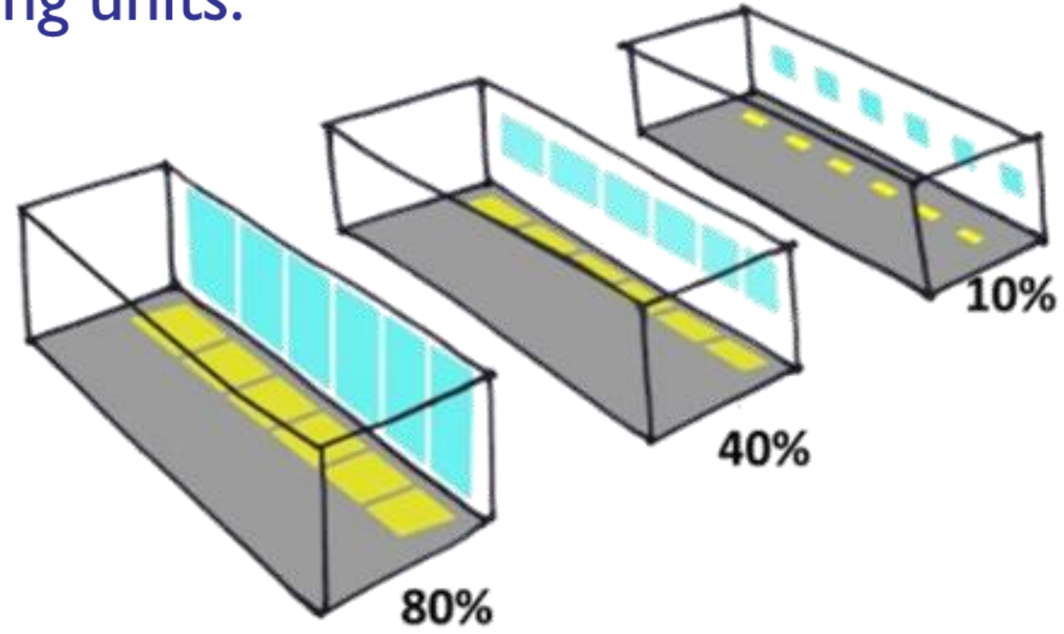
ENS (ECO NIWAS SAMHITA) 2018 PART-1

WFR_{OP} is Openable Window to Floor Area Ratio

Definition:

The openable window-to-floor area ratio (WFR_{op}) is the ratio of openable area to the carpet area of dwelling units.

$$WFR_{op} = \frac{A_{\ openable}}{A_{\ Carpet}}$$



Openable Window-to-Floor Area Ratio (WFRop)

$$WFR_{op} = \frac{A_{openable}}{A_{carpet}}$$

TABLE 1 Minimum requirement of window-to-floor area ratio (WFR_{op})

Climatic zone	Minimum WFR_{op} (%)
Composite	12.50
Hot-Dry	10.00
Warm-Humid	16.66
Temperate	12.50
Cold	8.33

ENS (ECO NIWAS SAMHITA) 2018 PART-1

Total Glazing 60 m^2

Openable Area 54m2

Floor Area 100m2

Calculation:

$$WFR = \frac{54}{100}$$

$$WFR = 0.54$$

$$= 54\%$$

ENS (ECO NIWAS SAMHITA) 2018 PART-1

Visible light transmittance(VLT)

- **Visible light transmittance (VLT)** of non-opaque building envelope components (transparent/translucent panels in windows, doors, ventilators, etc..), indicates the potential of using daylight.
- Ensuring minimum VLT helps in improving daylighting, thereby reducing the energy required for artificial lighting
- The VLT requirement is applicable as per the window-to-wall ratio (WWR) of the building.
- WWR is the ratio of the area of non-opaque building envelope components of dwelling units to the envelope area (excluding roof) of dwelling units.

$$WWR = \frac{A_{non-opaque}}{A_{envelope}}$$

TABLE 2 Minimum visible light transmittance (VLT) requirement[15]

Window-to-wall ratio (WWR)[16]	Minimum VLT [17]
0–0.30	0.27
0.31–0.40	0.20
0.41–0.50	0.16
0.51–0.60	0.13

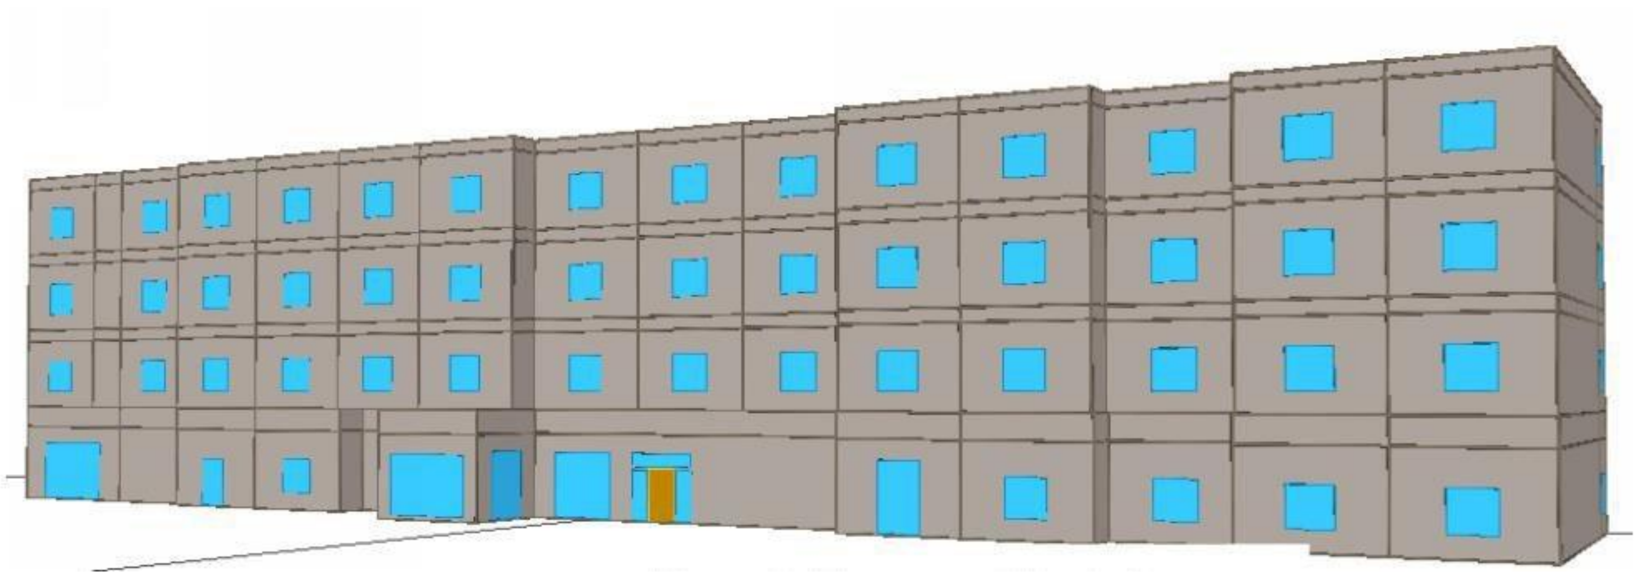
ENS (ECO NIWAS SAMHITA) 2018 PART-1

WINDOW TO WALL AREA RATIO (WWR)

$$WWR = \frac{Area\ of\ Non-Opaque\ Windows\ \&\ Openings}{Total\ Area\ of\ Exterior\ Walls\ Including\ Windows\ \&\ Openings}$$



ENS (ECO NIWAS SAMHITA) 2018 PART-1

WINDOW TO WALL AREA RATIO (WWR)

$$WWR = \frac{30 + 30}{40 + 30 + 30}$$

$$WWR = \frac{60}{100}$$

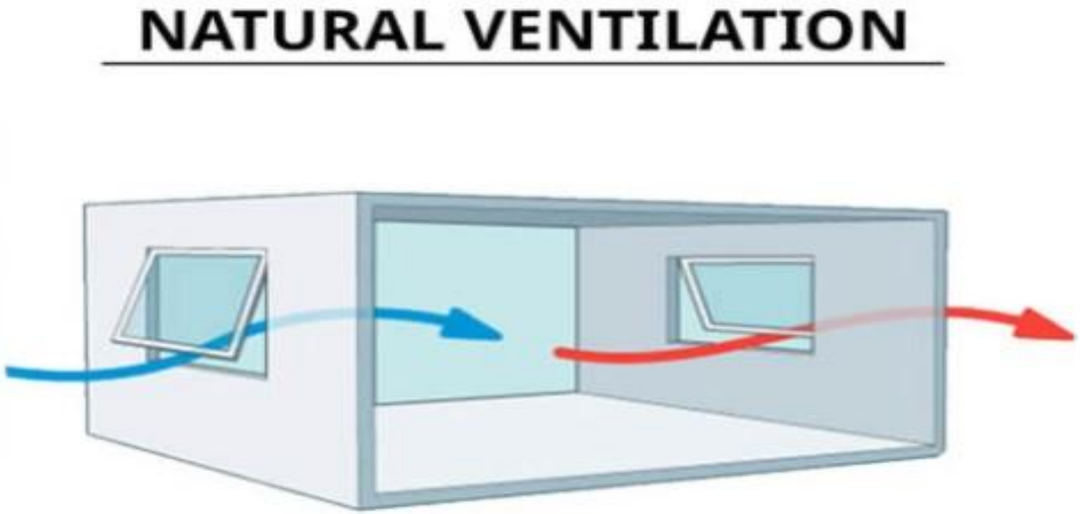
$$WWR = 0.6$$

$$= 60\%$$

ENS (ECO NIWAS SAMHITA) 2018 PART-1

Higher WFR_{op} helps in enhancement in

- ✓ *Natural Ventilation*
- ✓ *Thermal comfort*
- ✓ *Cooling Energy Savings*

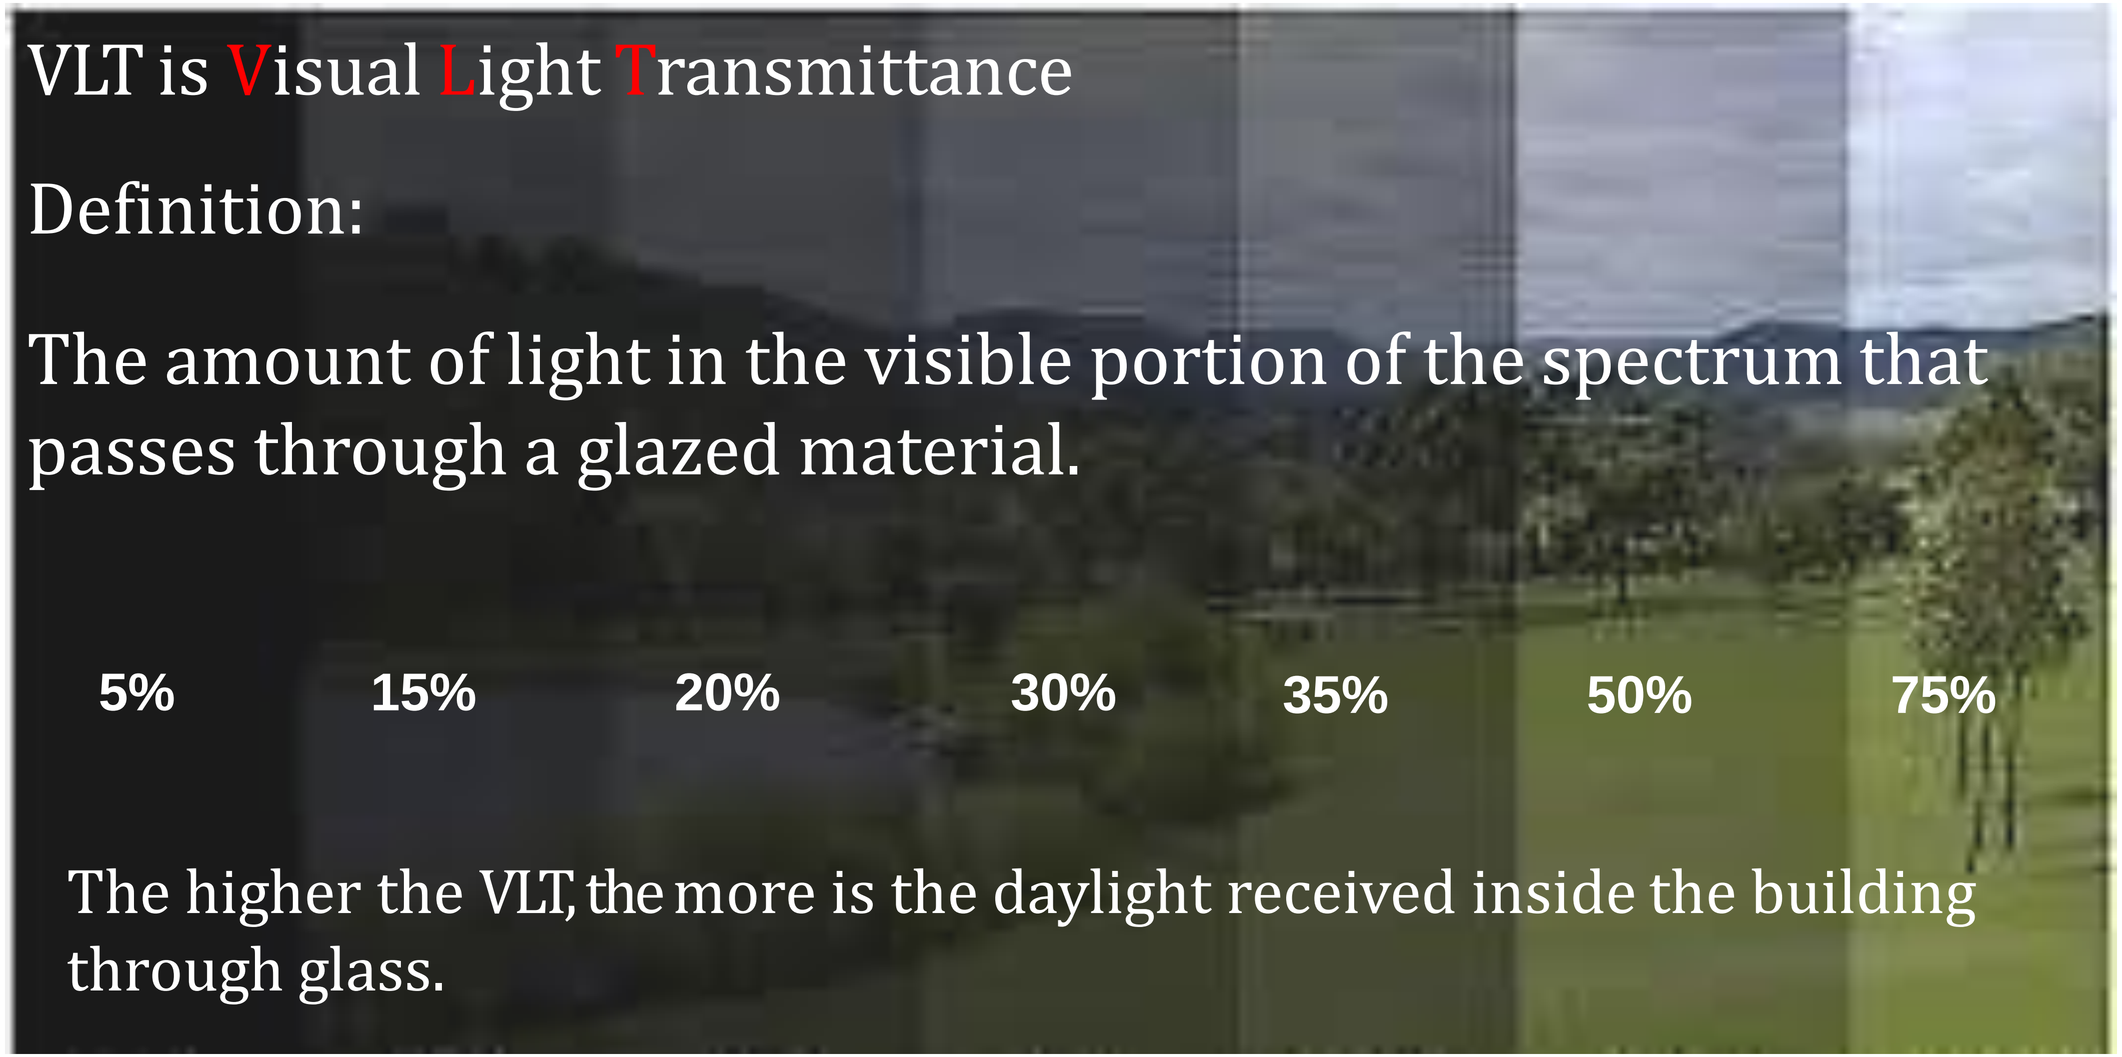


VISIBLE LIGHT TRANSMITTANCE (VLT)

VLT is Visual Light Transmittance

Definition:

The amount of light in the visible portion of the spectrum that passes through a glazed material.



The higher the VLT, the more is the daylight received inside the building through glass.

ENS (ECO NIWAS SAMHITA) 2018 PART-1

Thermal Transmittance Roof

- **Thermal Transmittance (U-roof)** characterizes the thermal performance of the roof assembly of a building.
- Limiting the U_{roof} helps in reducing heat gains or losses from the roof, thereby improving the thermal comfort and reducing the energy required for cooling or heating.
- Thermal transmittance of roof shall comply with the maximum U-roof value of 1.2 W/m2.K

$$U_{roof} = \frac{1}{A_{roof}} \left[\sum_{i=1}^{n} (U_i \times A_i) \right]$$

where,

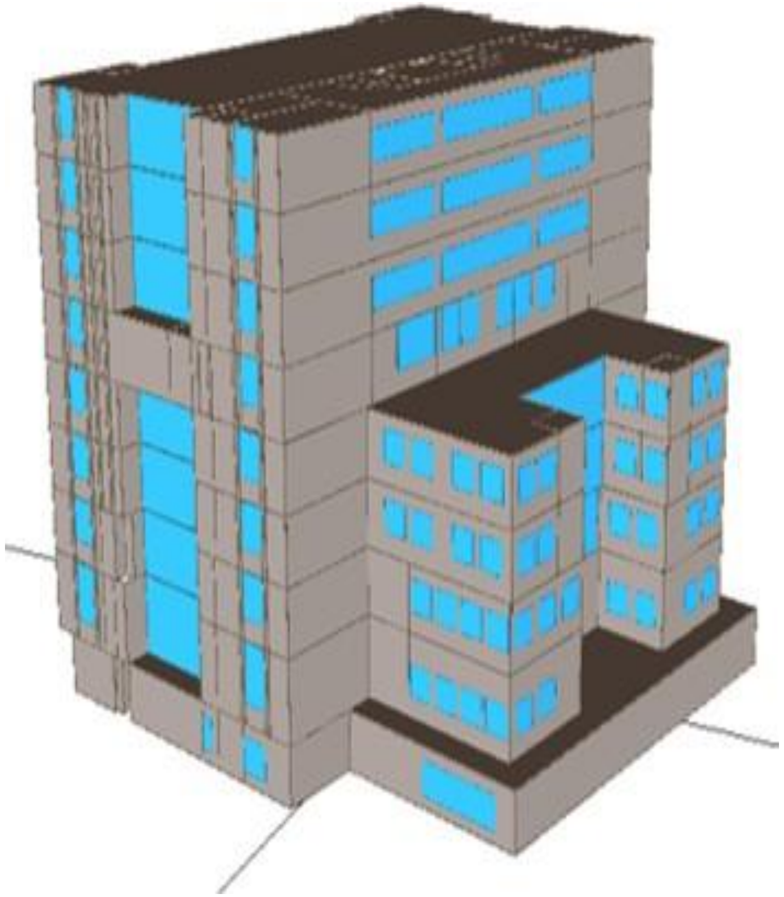
U_{roof} : thermal transmittance of roof (W/m².K)

A_{roof} : total area of the roof (m²)

U_i : thermal transmittance values of different roof constructions (W/m².K)

A_i : areas of different roof constructions (m²)

ENS (ECO NIWAS SAMHITA) 2018 PART-1



Thermal Transmittance of Roof (U_{roof})

Thermal transmittance (U_{roof}) characterizes the thermal performance of the roof of a building.

Maximum U_{roof} : **1.2 W/m²K.**

ENS (ECO NIWAS SAMHITA) 2018 PART-1

WHAT IS – U VALUE?

The lower the U-value, the lower the heat gain/loss in the building.

Definition:

Thermal transmittance is the rate of heat transfer through materials

Unit of U-Value : $W/(m^2K)$

$$\text{U-Value} = \frac{1}{\textit{Thermal Resistance of a material } (R)}$$

$$\text{Where } R = \frac{\textit{Thickness of material } (t)}{\textit{Conductivity } (k)}$$

Conductivity (k) is the rate at which heat travels through 1 meter thick material. It is a property of a material

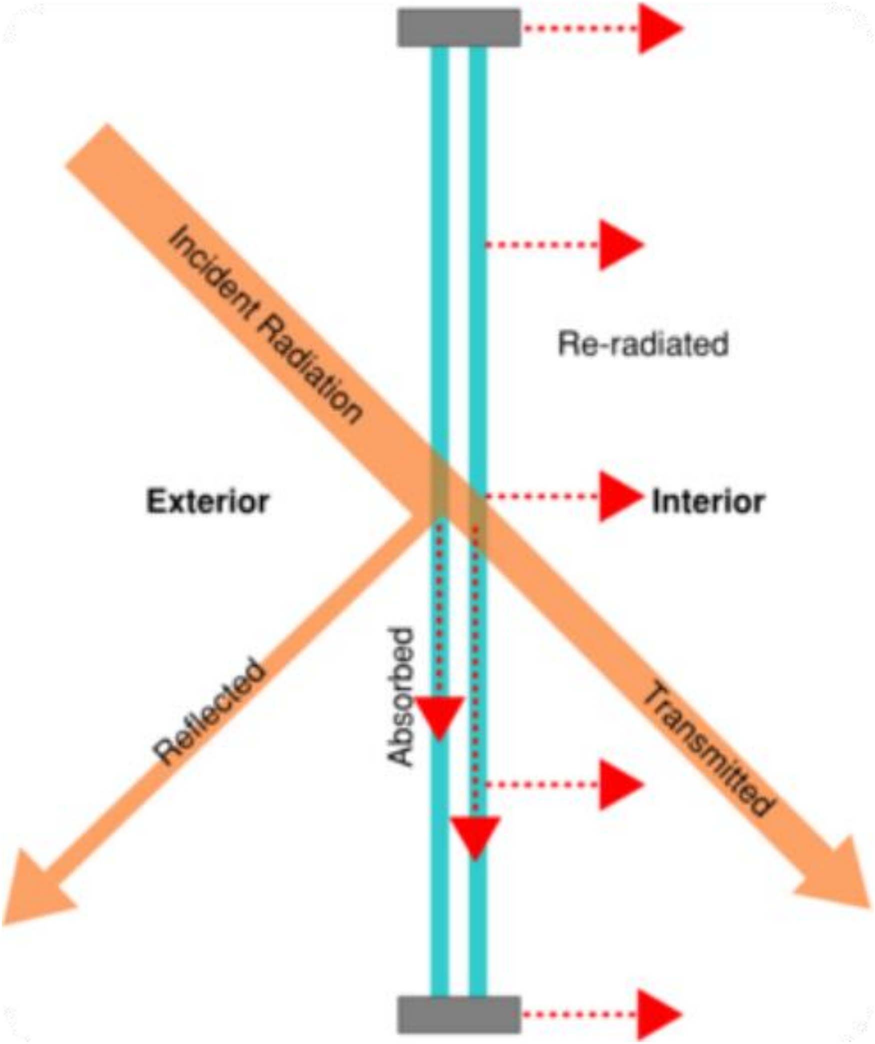
ENS (ECO NIWAS SAMHITA) 2018 PART-1

SHGC

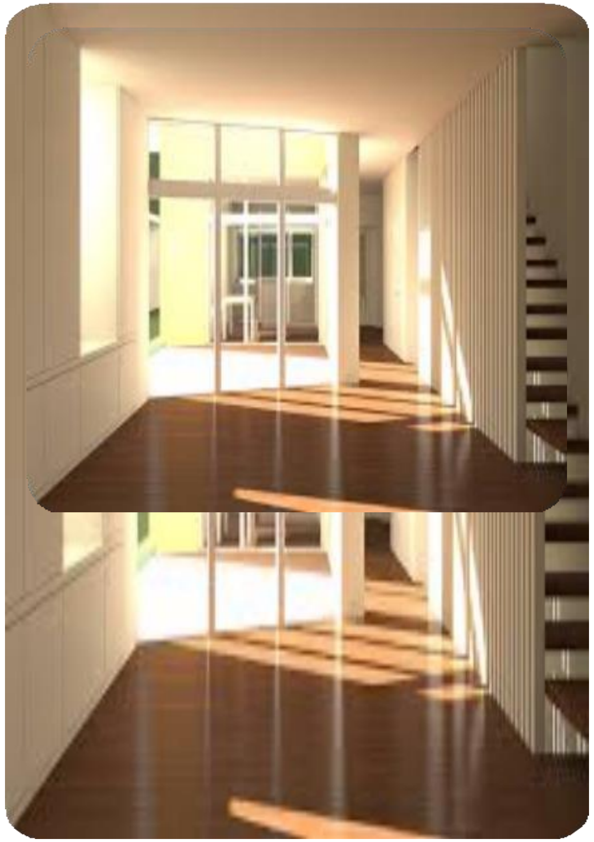
Solar Heat Gain Coefficient Definition:

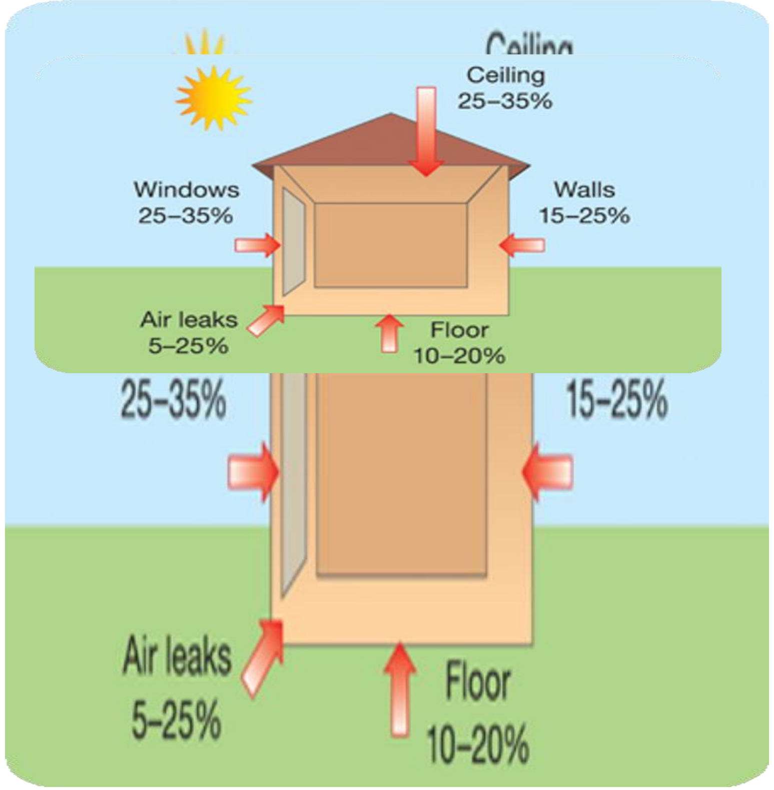
SHGC is the fraction of incident solar radiation admitted through window, both directly transmitted and absorbed an subsequently released inward.

The value of SHGC varies from 0 - 1



ENS 2018-BUILDING ENVELOPE COMPLIANCE REQUIREMENTS





Transparency

1. Window to Wall Ratio
2. Visual Light Transmittance

Heat transfer

3. U-Value of Walls
4. Solar Heat Gain Coefficient
5. U-Value of Roofs

Ventilation

6. Window to Floor Area Ratio

ENS (ECO NIWAS SAMHITA) 2018 PART-1

Residential Envelope Transmittance Value (RETV)

- Applicable for building envelope (except roof) for four climate zones, namely, Composite Climate, Hot-Dry Climate, Warm-Humid Climate, and Temperate Climate.
- **Residential envelope heat transmittance** is the net heat gain rate (over the cooling period) through the building envelope (excluding roof) of the dwelling units divided by the area of the building envelope (excluding roof) of the dwelling units.
- Its unit is W/m2
- RETV characterizes the thermal performance of the building envelope (except roof).
- Limiting the RETV value helps in reducing heat gains from the building envelope, thereby improving the thermal comfort and reducing the electricity required for cooling.

ENS(ECO NIWAS SAMHITA) 2018 PART-1

Residential Envelope Transmittance Value (RETV)

RETV formula takes into account the following:

- Heat conduction through opaque building envelope components (wall, opaque panels in doors, windows, ventilators, etc..),
- Heat conduction through non-opaque building envelope components (transparent/ translucent panels of windows, doors, ventilators, etc..),
- Solar radiation through non-opaque building envelope components (transparent/translucent panels of windows, doors, ventilators, etc..)
- The RETV for the building envelope (except roof) for four climate zones, namely, Composite Climate, Hot-Dry Climate, Warm-Humid Climate, and Temperate Climate, shall comply with the maximum RETV* of 15 W/m2.

**BEE plans to improve the RETV norm to 12 W/m^2 in the near future and the building industry and regulating agencies are encouraged to aim for it.*

ENS (ECO NIWAS SAMHITA) 2018 PART-1

Residential envelope transmittance value (RETV)

$$RETV = \frac{1}{A_{envelope}} \times \left[\begin{array}{l} \left\{ a \times \sum_{i=1}^{n} \left(A_{opaque_i} \times U_{opaque_i} \times \omega_i \right) \right\} \\ + \left\{ b \times \sum_{i=1}^{n} \left(A_{non-opaque_i} \times U_{non-opaque_i} \times \omega_i \right) \right\} \\ + \left\{ c \times \sum_{i=1}^{n} \left(A_{non-opaque_i} \times SHGC_{eq_i} \times \omega_i \right) \right\} \end{array} \right]$$

$\boldsymbol{A_{envelope}}$ **:** Envelope area (excluding roof) of dwelling units (m2). It is the gross external wall area (includes the area of the walls and the openings such as windows and doors).

$\boldsymbol{A_{opaque}}$ **:** Areas of different opaque building envelope components (m^2)

$\boldsymbol{U_{opaque}}$: thermal transmittance values of different opaque building envelope components ($W/m^2.K$)

$\boldsymbol{A_{non\text{-}opaque}}$ **:** Areas of different non-opaque building envelope components (m^2)

$\boldsymbol{U_{non\text{-}opaque}}$ **:** Thermal transmittance values of different non-opaque building envelope components ($W/m^2.K$)

$\boldsymbol{SHGC_{eqi}}$: Equivalent solar heat gain coefficient values of different non-opaque building envelope components

$\boldsymbol{\omega_i}$: Orientation factor of respective opaque and non-opaque building envelope components; it is a measure of the amount of direct and diffused solar radiation that is received on the vertical surface in a specific orientation

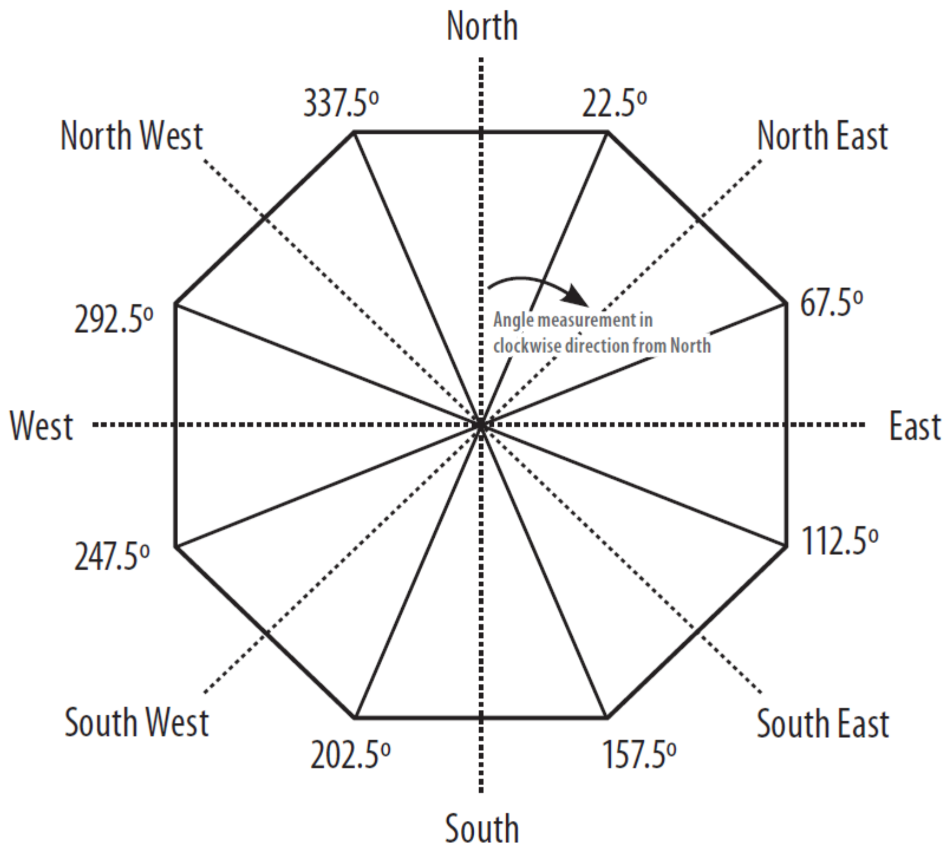
Residential envelope transmittance value (RETV)

Coefficients (a, b, and c) for RETV formula

Climate zone	a	b	c
Composite	6.06	1.85	68.99
Hot-Dry	6.06	1.85	68.99
Warm-Humid	5.15	1.31	65.21
Temperate	3.38	0.37	63.69
Cold	Not applicable (Refer Section 3.5)		

Orientation factor (ω) for different orientations

Orientation	Orientation factor (ω)	
	Latitudes ≥23.5°N	Latitudes <23.5°N
North (337.6°–22.5°)	0.550	0.659
North-east (22.6°–67.5°)	0.829	0.906
East (67.6°–112.5°)	1.155	1.155
South-east (112.6°–157.5°)	1.211	1.125
South (157.6°–202.5°)	1.089	0.966
South-west (202.6°–247.5°)	1.202	1.124
West (247.6°–292.5°)	1.143	1.156
North-west (292.6°–337.5°)	0.821	0.908



ENS (ECO NIWAS SAMHITA) 2018 PART-1

RETV can be calculated by using the following formula:-

$$RETV = \frac{1}{A_{envelope}} \times \left[\left\{ a \times \sum_{i=1}^{n} \left(A_{opaque_i} \times U_{opaque_i} \times \omega_i \right) \right\} + \left\{ b \times \sum_{i=1}^{n} \left(A_{non-opaque_i} \times U_{non-opaque_i} \times \omega_i \right) \right\} + \left\{ c \times \sum_{i=1}^{n} \left(A_{non-opaque_i} \times SHGC_{eq_i} \times \omega_i \right) \right\} \right]$$

Wall Conductive Heat Gains

Window Conductive Heat Gain

Window Radiation Heat Gain

- The RETV of the building envelope (except roof) for four climate zones, namely, Composite Climate, Hot-Dry Climate, Warm-Humid Climate, and Temperate Climate, shall comply with the maximum **RETV of 15 W/m^2**

Thermal transmittance of building envelope (except roof) for cold climate ($U_{Envelope,cold}$)

- Thermal transmittance ($U_{Envelope,cold}$) characterizes the thermal performance of the building envelope (except roof). Limiting the $U_{Envelope,cold}$ helps in reducing heat losses from the building envelope, thereby improving the thermal comfort and reducing the energy required for heating

- Thermal transmittance of the building envelope (except roof) for cold climate shall comply with **the maximum of 1.8 W/m^2.K.**

$$U_{envelope,cold} = \frac{1}{A_{envelope}}\left[\sum_{i=1}^{n}(U_i \times A_i)\right] \qquad ...(5)$$

where,

$U_{envelope,cold}$: thermal transmittance of building envelope (except roof) for cold climate (W/m^2.K)

$A_{envelope}$: envelope area (excluding roof) of dwelling units (m^2). It is the gross external wall area (includes the area of the walls and the openings such as windows and doors)

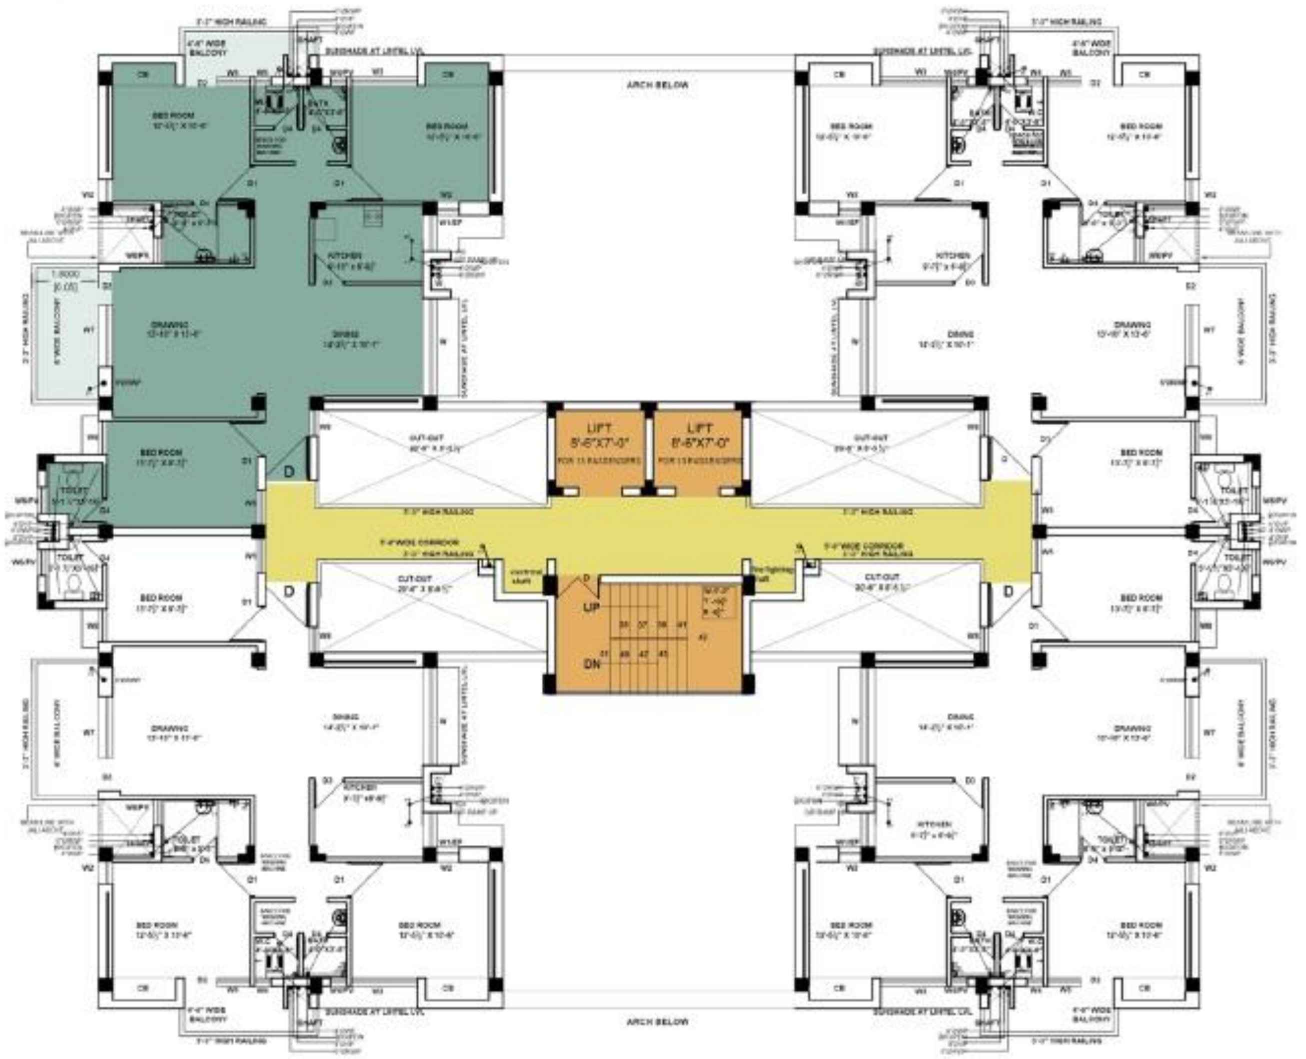
U_i : thermal transmittance of different opaque and non-opaque building envelope components (W/m^2.K)

A_i : area of different opaque and non-opaque opaque building envelope components (m^2)

CASE STUDY RESIDENTIAL QUARTER NABARD

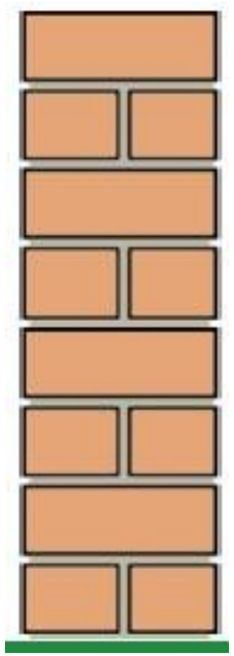
- Residential quarters built for the **NABARD** *(National Bank For Agriculture & Rural Development)* staff at Mohali.
- The climate type is composite and is similar to that of Chandigarh.

No. of dwelling units in Block II (DU): 20 (all 2 BHK) Stilt + 5 storeys



PLAN OF RESIDENTIAL QUARTER

Case I: 230 mm brick wall + Normal WWR + Single Clear Glazing + No Shading of Windows

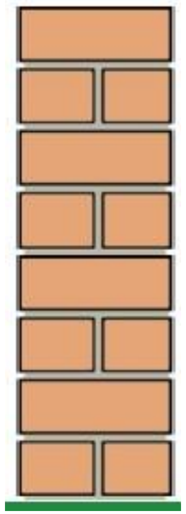


230mm Normal Brick wall with U value – 2 w/m²k

	RETV Wall conduction	**RETV** Window conduction	**RETV** Window Radiation	**RETV (TOTAL)**
Case.1 • Brick Wall • No Shading • Single clear glazing • WWR: ~14%	10.1	1.8	9.6	**21.5**

- **RETV: 21.5 W/m² higher than 15 W/m² (Non compliant)**
- **Heat conduction through wall is high and high heat gain through windows with no shading**

Case II: Case I + Proper Shading of Windows

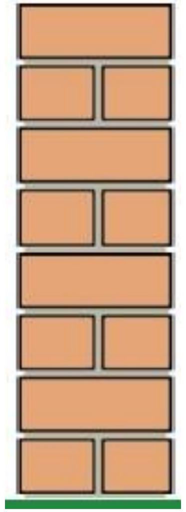


230mm Normal Brick wall with U value – 2 w/m^2k

	RETV Wall conduction	RETV Window conduction	RETV Window Radiation	RETV (TOTAL)
Case.2 • Brick Wall • **Shading with overhang & Fins** • Single clear glazing • WWR: ~14%	10.1	1.8	**6.7**	**18.6**

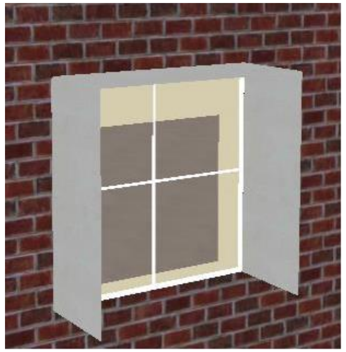
- **RETV = 18.6 W/m^2**
- **Shading helps in reducing heat gain through windows**

Case III: Case II+ Single reflective glass



230mm Normal Brick wall with U value – 2 w/m^2k

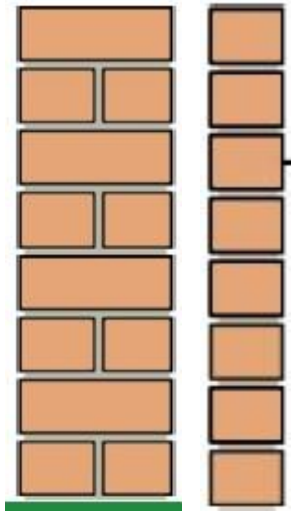
	RETV Wall conduction	RETV Window conduction	RETV Window Radiation	RETV (TOTAL)
Case.3 • Brick Wall • Shading with overhang & Fins • **Single reflective glazing** • WWR: ~14%	10.1	1.8	**4.5**	**16.3**



+

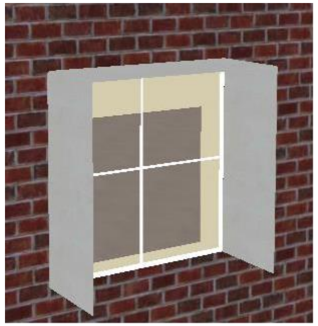
- **RETV = 16.3 W/m^2**
- **High Reflective Glass also helps in reducing heat gain through windows**

Case IV: (Final Design Constructed) Brick cavity wall+ Shading+ Single reflective glass



230 mm + 40 mm cavity +115 mm brick with U value – 1.1 w/ m^2k

	RETV Wall conduction	RETV Window conduction	RETV Window Radiation	RETV (TOTAL)
Case.4 • **Brick Cavity Wall** • Shading with overhang & Fins • Single reflective glazing • WWR: ~14%	**6.6**	1.8	4.5	**12.8**



- **RETV = 12.8 W/m^2**
- **Cavity in Brick reduces the conduction heat gain**

	RETV Wall conduction	RETV Window conduction	RETV Window Radiation	RETV (TOTAL)
Case.1 • Brick Wall • No Shading • Single clear glazing • WWR: ~14%	10.1	1.8	9.6	**21.5**
Case.2 • Brick Wall • **Shading with overhang & Fins** • Single clear glazing • WWR: ~14%	10.1	1.8	**6.7**	**18.6**
Case.3 • Brick Wall • Shading with overhang & Fins • **Single reflective glazing** • WWR: ~14%	10.1	1.8	**4.5**	**16.3**
Case.4 • **Cavity Brick Wall** • Shading with overhang & Fins • Single reflective glazing • WWR: ~14%	**6.6**	1.8	4.5	**12.8**
Case.5 • **AAC Block** • Shading with overhang & Fins • Single reflective glazing • WWR: ~14%	**4.7**	1.8	4.5	**10.9**

ENS (ECO NIWAS SAMHITA) 2021 PART-2

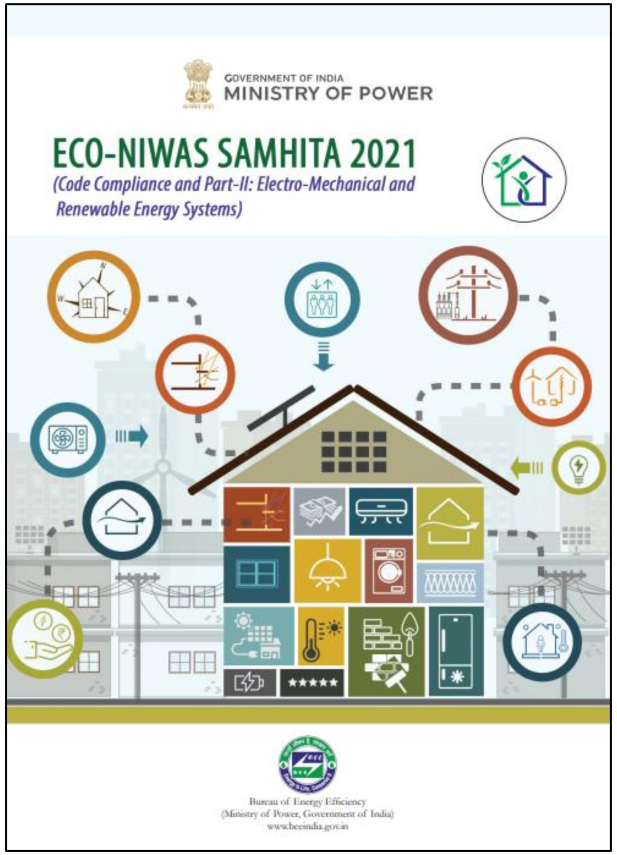
Introduction

The **Eco Niwas Samhita 2021** (Code Compliance and Part-II: Electro-Mechanical and Renewable Energy Systems) is a code specifying code compliance approaches and minimum energy performance requirements for building services, indoor electrical end-use and renewable energy system.

ENS 2021 is for code compliance and to provide the minimum requirement(s) for:

1. ***Building services***
2. ***Electro-mechanical***
3. ***Renewable energy systems for new residential buildings.***

Note:-*The code sets minimum requirement for all building envelope parameters as mentioned in Eco Niwas Samhita 2018 (Part I: Building Envelope).*



PART-2: **Building Services, Indoor Electrical Use, Renewable Energy Systems (launched in 2021)**

ENS (ECO NIWAS SAMHITA) 2021 PART-2

Minimum Requirement

Code Compliance and Part II – Electro-Mechanical and Renewables Systems

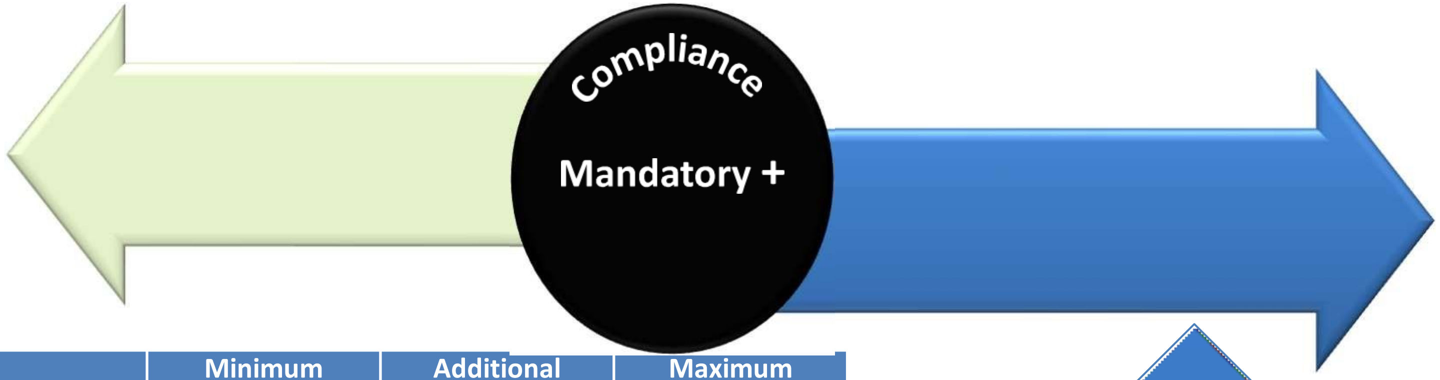
The code applies to –

- Residential buildings built on a plot area of **≥ 500 m²**
- Residential part of ***Mixed land-use building*** projects, built on a plot area of **≥ 500 m²**.

Also applies to:

- **Additions**
- **Alterations**

ENS (ECO NIWAS SAMHITA) 2021 PART-2 : CODE COMPLIANCE



Components	Minimum Points	Additional Points	Maximum Points
Building Envelope			
Building Envelope	47	40	87

Renewable Energy Systems Components	Minimum Points	Additional Points	Maximum Points
Solar Hot Water Systems		10	10
Solar Photo Voltaic		10	10
Additional ENS Score		20	

ENS (ECO NIWAS SAMHITA) 2021 PART-2: CODE COMPLIANCE

Project Category	Minimum ENS Score
Low rise buildings	47
Affordable Housing	70
High rise buildings	100

Low Rise Buildings: A building equal or below 4 stories, and/or a building up to 15 meters in height (without stilt) and up to 17.5 meters (including stilt).

Affordable Housing Projects:

- for Affordable houses are Dwelling Units (DUs)
- for Economically Weaker Section (EWS) category
- For Lower Income Group (LIG) category

High Rise Buildings: A building above 4 stories, and/or a building exceeding 15 meters or more in height (without stilt) and 17.5 meters (including stilt).

ENS(ECO NIWAS SAMHITA) 2021 PART-2

ENS-Part 2 Applicability

The ***ECO NIWAS SAMHITA 2021*** (based on the category of project) applies to the following essential design elements of a building:

- **Building envelope** (Minimum performance requirements for RETV, $\text{U-Value}_{\text{Roof}}$, U-Value, WFR and VLT).
- **Building Services** (Minimum performance criteria for common area lighting, lifts, pumps, DG Sets, Transformers, Car Parking etc.).
- **Indoor Electrical** Use (maximum interior lighting power density allowance, minimum performance requirements for ceiling fans and cooling systems)
- **Renewable energy systems** (mandatory provisions for renewable systems in design).

ENS(ECO NIWAS SAMHITA 2021 PART-2

1. **Building Envelope-**All requirements for building envelope under mandatory section as mentioned in Chapter 4 of ENS Part I.

2. **Power Factor Correction:** 0.97 at point of connection in all 3 phases or State requirement, which ever is stringent.

3. **Energy Monitoring:**
   - Common area lighting (Outdoor lighting, corridor lighting and basement lighting)
   - Elevators
   - Water pumps
   - Basement car parking ventilation system
   - Electricity generated from power back-up
   - Electricity generated through renewable energy systems
   - Lift pressurization system

4. **Electrical Vehicle Charging Station:** If installed, it shall be as per revised guidelines issued by MoP for Charging Infrastructure.

5. **Electrical Systems:**

Distribution losses shall not exceed 3% of the total power usage in the ENS building Voltage drop for feeders < 2% at design load. Voltage drop for branch circuit < 3% at design load.

ENS (ECO NIWAS SAMHITA) 2021 PART-2

Prescriptive Requirement – set of check list

1. **Building Envelope:**
   - VLT and WFR – as per ENS Part 1
   - RETV (for all climate except cold) – max 12 W/m2
   - Thermal Transmittance for cold – max 1.3W/m2K
   - Roof – 1.2W/m2K

2. **Common Area & Exterior Lighting: Either LPD or Efficacy and use of Photo Sensor**

Common Areas	Maximum LPD (W/m^2)	Minimum luminous efficacy (lm/W)
Corridor lighting & Stilt Parking	3.0	All the permanently installed lighting fixtures shall use lamps with an efficacy of at least 105 lumens per Watt
Basement Lighting	1.0	All the permanently installed lighting fixtures shall use lamps with an efficacy of at least 105 lumens per Watt

If Exterior Lighting is more than 100W, Lamp efficacy shall be 105 l/W or as per table

Exterior Lighting Areas	Maximum LPD (in W/m^2)
Driveways and parking (open/ external)	1.6
Pedestrian walkways	2.0
Stairways	10.0
Landscaping	0.5
Outdoor sales area	9.0

ENS (ECO NIWAS SAMHITA) 2021 PART-2

3. Elevators, if applicable:

- Lamps: 85l/W
- Automatic switch off control
- IE4 motors
- VFDs
- Regenerative drives
- Group Automatic operation

4. Pumps, if applicable: Min Eff -70% or BEE 5 Star

5. Electrical Transformers

- Distribution loss less than 3%
- Dry Type Transformer - as mentioned in table
- Oil Type Transformer – BEE 5 Star

ENS (ECO NIWAS SAMHITA) 2021 PART-2

Prescriptive Requirements

1. **Building Envelope-**All requirements for building envelope under mandatory section as mentioned in Chapter 4 of ENS Part I. The Residential Envelope Transmittance Value (RETV) for the building envelope (except roof) for four climate zones shall comply with the maximum RETV of 12 W/m2 . Thermal transmittance of building envelope for cold climate shall comply with the maximum U value of 1.3 W/m2 ·K.

- Openable window to floor area ratio (WFR_{op})
- Visible light Transmittance*(VLT)*
- Thermal Transmittance of roof or U-Value of roof
- Residential Envelope transmittance Value*(RETV)*

2. **Common Area and Exterior Lighting**

Common Areas	Maximum LPD (W/m²)	Minimum luminous efficacy (lm/W)
Corridor lighting & Stilt Parking	3.0	All the permanently installed lighting fixtures shall use lamps with an efficacy of at least 105 lumens per Watt
Basement Lighting	1.0	All the permanently installed lighting fixtures shall use lamps with an efficacy of at least 105 lumens per Watt

Exterior Lighting Areas	Maximum LPD (in W/m²)
Driveways and parking (open/ external)	1.6
Pedestrian walkways	2.0
Stairways	10.0
Landscaping	0.5
Outdoor sales area	9.0

ENS (ECO NIWAS SAMHITA) 2021 PART-2

Prescriptive Requirements

3. Elevators if Applicable

The Elevators installed in the ENS compliant building shall meet the following requirements:

i. Install high efficacy lamps for lift car lighting having minimum luminous efficacy of 85 lm/W

ii. Install automatic switch-off controls for lighting and fan inside the lift car when are not occupied

iii. Install minimum class IE 4 high efficiency motors

iv. Installing the variable voltage and variable frequency drives

v. Installing regenerative drives.

vi. Group automatic operation of two or more elevators coordinated by supervisory control

4. Pumps if Applicable

Either hydro-pneumatic pumps having minimum mechanical efficiency of 70% or BEE 5 star rated Pumps shall be installed in the ENS building.

Prescriptive Requirements

5. Electrical Systems

Power transformers of the proper ratings and design must be selected to satisfy the minimum acceptable efficiency at 50% and full load rating. The permissible loss shall not exceed the values listed in Table 6 for dry type transformers and BEE 5-star rating in Table 7 for oil type transformers.

ENS (ECO NIWAS SAMHITA) 2021 PART-2

Code Compliance

Mandatory requirements
(Meet mandatory requirements of the code)

Prescriptive requirements
(Meet the specified MEPS of each of the applicable component)

Comply

Points system
(Achieve minimum points required as per building typology)

Comply

ENS (ECO NIWAS SAMHITA) 2021 PART-2

Applicable components as per compliance method

- In order to demonstrate compliance with the code through the ***Prescriptive Method***, the ENS building shall meet mandatory requirements specified along with prescriptive requirements.
- In order to demonstrate compliance with the code through the ***Point System Method***, the ENS building shall meet all applicable mandatory requirements along with point system requirements.

		Mandatory	Prescriptive	Point System
1	**Envelope**			
1.1	RETV		✓	✓
1.2	Building Envelope Cold (Uenvelope)		✓	✓
1.3	U-value Roof		✓	✓

4.2	Solar PV			✓

ENS (ECO NIWAS SAMHITA) 2021 PART-2

Different scores based on the project types and typologies

In order to demonstrate compliance with the code, the ENS building shall comply with all applicable mandatory requirements and shall achieve a minimum ENS Score by following either the prescriptive method or the point system method. The table below gives the minimum ENS score required to be obtained as per eligible project category:

Project Category	Minimum ENS Score
Affordable high-rise housing	70
Low-rise buildings*	47
Other High-rise buildings	100

*Low-rise buildings should only meet envelope requirements to show ENS compliance

Affordable housing: Housing projects where 35% of the houses are constructed for EWS category (PMAY Definition)

Low rise buildings: A building equal or below 4 stories, and/or a building up to 15 meters in height (without stilt) and up to 17.5 meters (including stilt).

High rise buildings: A building above 4 stories, and/or a building exceeding 15 meters or more in height (without stilt) and 17.5 meters (including stilt).

ENS (ECO NIWAS SAMHITA) 2021 PART-2

ENS-Part 2 Component wise score distribution for compliance

Components	Minimum Points	Additional Points	Maximum Points
Building Envelope			
Building Envelope	47	40	87
Building Services			
Common area & exterior lighting	3	6	9
Elevators	13	9	22
Pumps	6	8	14
Electrical Systems	1	5	6
Indoor Electrical End-Use			
Indoor Lighting		12	12
Comfort Systems		50	50
ENS Score	70	130	200

Renewable Energy Systems Components	Minimum Points	Additional Points	Maximum Points
Solar Hot Water Systems		10	10
Solar Photo Voltaic		10	10
Additional ENS Score		20	20

- **Minimum points:** are the set of points which are compulsory to achieve for each component to show compliance for ENS
- **Additional Points:** are the set of points which are awarded for adopting additional or better energy efficiency measures in a respective component. These points are trade able with other components to achieve the total score mentioned in section 3.1.2 for ENS compliance.
- **Maximum points** are the total points available for each component.

ENS (ECO NIWAS SAMHITA) 2021 PART-2

Final Point System

- Envelope
- Building Services
- Indoor Electrical End Use
- Renewable Energy System

		Always Applicable/Elective	Minimum Points	Essential Points	Additional Points	Maximum
1	**Envelope**					87
1.1	RETV or Building Envelope Cold	Applicable	44	44	36	80
1.2	U-value Roof	Applicable	3	3	4	7
1.3	WFRop	Applicable				
1.4	VLT	Applicable				
2	**Building Services**					51
2.1	Common area Lighting	Applicable	3	3	6	9
2.1.1	Outdoor Lighting	Meet minimum requirements, as applicable				
2.1.2	Corridor Lighting	Meet minimum requirements, as applicable				
2.1.3	Basement Lighting	Meet minimum requirements, as applicable				
2.2	Lifts	Applicable	13	13	9	22
2.3	Pumps	Applicable	6	6	8	14
2.4	Transformer	Applicable	1	1	5	6
3	**Indoor Electrical End Use**					62
3.1	Indoor Lighting	Meet minimum requirements, as applicable	4		8	12
3.2	Comfort Systems	Meet minimum requirements, as applicable	26		24	50
TOTAL						200
4	**Renewable Energy System**					20
4.1	Solar HW	Meet minimum requirements, as applicable				10
4.2	Solar PV	Meet minimum requirements, as applicable				10

SIMULATION TOOL

ECO NIWAS SAMHITA

Compliance Tool

INTRODUCTION

Quick design and compliance checks benchmarks of ***ECONIWAS SAMHITA***.

5 key features in consideration:

1. User-friendliness

2. Responsiveness

3. Adaptability

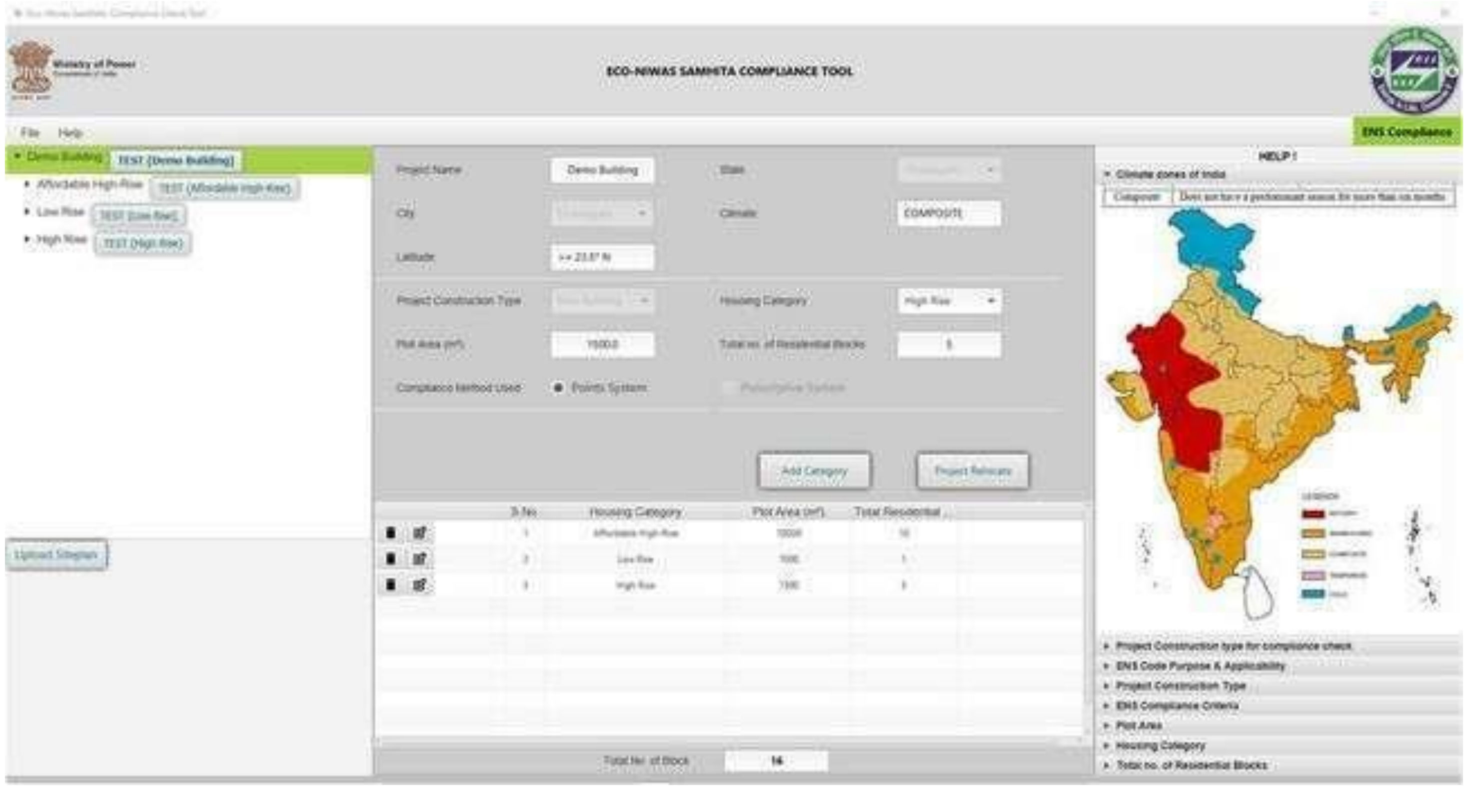
4. Dynamism

5. Resourcefulness.

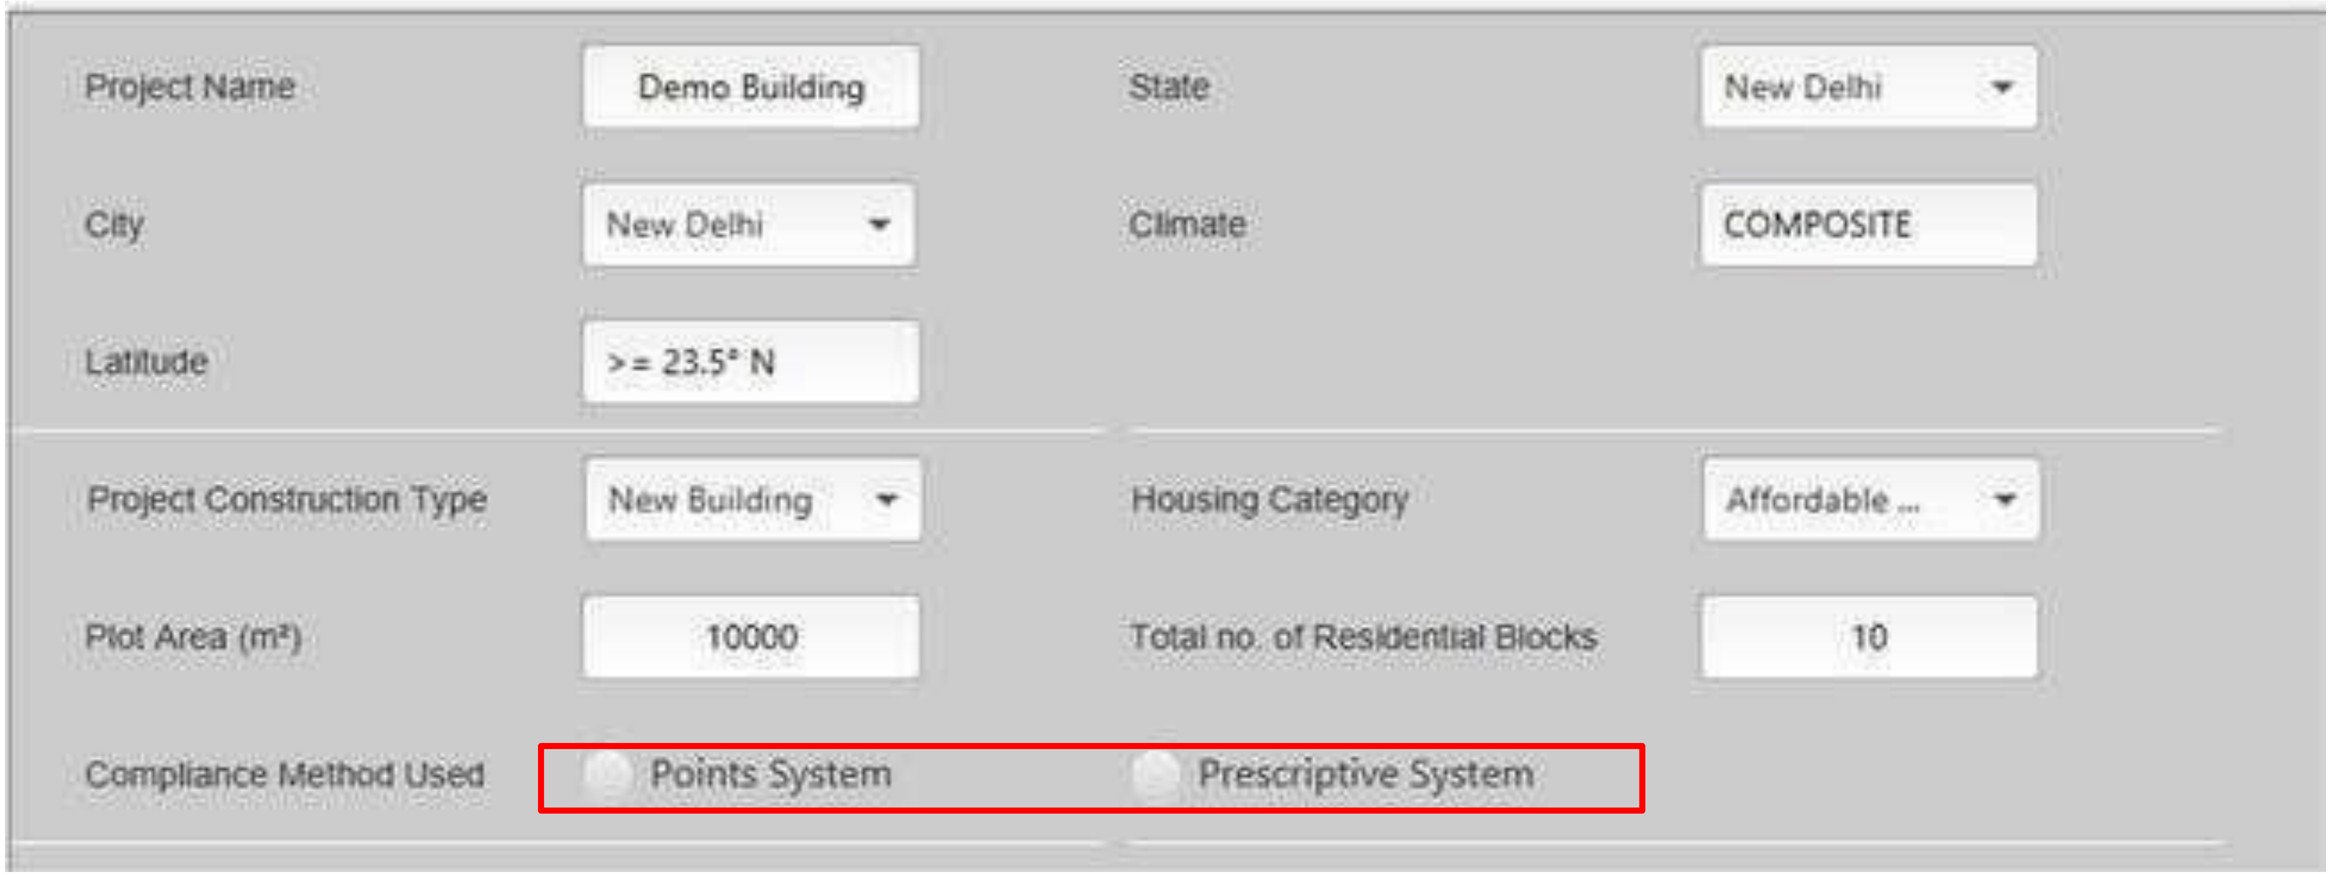
- Compliance for Both **Prescriptive** and **Points Based Systems**.
- Categories included:

High rise **Low Rise**

Affordable **Mixed Use**



ECO NIWAS SAMHITA COMPLIANCE TOOL: KEY FEATURES



- *Easy project definition.*
- *Provisions for point system as well as prescriptive system approach for compliance evaluation.*

ECO NIWAS SAMHITA COMPLIANCE TOOL: KEY FEATURES

S.No.	Housing Category	Plot Area (m²)	Total Residential Block
1	Affordable High-Rise	10000	10
2	Low Rise	1000	1
3	High Rise	1500	5

Total No. of Block: 16
